Ok, I'll bite. What is the Amateur Satellite Service? Did you define it in your list of assumptions and prepositions? How does it differ from the US Amateur Radio Service? As this hypothetical situation is 1999, should we suppose that the FCC still exists or has been privatized? If privatized what are the licensing fees, and since there is no longer any need to hoodwink the US taxpayers should it not be the US Amateur Radio "Hobby" and/or Amateur Satellite "Hobby"? By that point in time, I suspect Vince's prophesies would have come true, in which case there would only need to be "beginner with limited access, and "master operator" with full access.

73, wynnt

I think you are quoting my post here.

>The RC-100 and 1000s does not support multiple rptrs/links like
>the LinkComs can, nor do they have the speech
>vocabulary like the LinkComs...considering that the ACC systems
>used to be the standard, the LinkComs are CHEAP compared to
>them....

This is true, but for the record: Only once you get to the $649 RLC-2 from Link do you get the flexible pre-recorded (Texas Instruments Speak-n-spell) vocabulary. RLC-1 for $199 does get you one flexible remote port, the RLC-4 does have a DVR option (which will bring the total price to around $500) - but this seems to blow the original request's #1 rule of 'not over $150' all to hell.

>For what HE was asking for, the Linkcom RLC series is the one to
>go with....for little link capacity while having voice ids and
>autopatch... CATs are also good units...

The only thing close to the original $150 price range though are the RLC-1, which lacks any easy voice proviso (although some creative control of the TTL outputs to an external DVR might be possible, this would entail some serious R&D time. By no means plug-n-play).

Otherwise I have to agree with Chris (not me, the 5-th area one) that the Link boxes are the controllers of choice if you want/need maximum control and flexibility- but you might as well flush the $150 idea real quick. The RLC-3 with the autopatch option I believe is $1349 or more now.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 16/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 16 DECEMBER AND FORECAST FOR 17 DECEMBER - 19 DECEMBER

1A. SOLAR SUMMARY
Activity: Very Low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 15 Dec
Daily Proton Fluence >1 MeV: 3.2E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.7E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
17 Dec 18 Dec 19 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 17 Dec: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to active

Estimated Indices : A K Observed A Index 15 Dec
Learmonth 16 3444 3222
Fredericksburg 20 12
Planetary 20 11

Observed Kp for 15 Dec: 0123 4332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
17 Dec 10 quiet to unsettled
18 Dec 10 quiet to unsettled
19 Dec 10 quiet to unsettled

COMMENT: The cause of yesterdays active periods is not
known.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Dec Normal Fair-normal Fair-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
17 Dec Normal Normal Fair
18 Dec Normal Normal Fair
19 Dec Normal Normal Fair
COMMENT: Degraded HF conditions may have been experienced early in
the UT day yesterday. Good HF conditions expected for today.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
16 Dec -17

Observed Australian Regional MUFs:
Townsville Sydney: depressed 30% 00-08UT then near predicted
monthly values.
Hobart: depressed 30% 00-14UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
17 Dec 30 10 to 15% above predicted monthly values
18 Dec 10 near predicted monthly values
19 Dec 10 near predicted monthly values

COMMENT: Good HF conditions expected for today. Spoardic E
also again expected for southern region Australia.

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Add me to the list of satisfied customers - I called to order a used radio last tuesday, and it was in my hands on Friday (in Denver). The shipment included MORE accessories than they originally claimed, they didn't charge for shipment, everything was in excellent shape and well packaged. Definately pleased at this end.

3830. Spread-Spectrum questions

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-16 00:00:00 UTC
From: c-three@telepost.no
Message-ID: <4auqj9$knc@nms.telepost.no>
Source record: 233820

I understand that spread-spectrum techniques will allow the transmission/reception of signals that are basically 'hidden' in the background noise. I wonder how far it actually is possible to go. How high can the so-called 'processing-gain' be? Will it be possible to recover signals that are just under the receiver noise-floor? Some popular discussion of SS are making statements that are not well founded and difficult to believe.

I have also heard that SS radio is more able to penetrate obstacles like concrete walls etc. This was in an article about indoor wireless LANs. If this is a fact, what are the actual reasons for this?

I would very much appreciate any clarifications or references to where these issues are discussed.

Best regards,

Per-Tore

Source record: 233823

In response to the query by Scott Parker about a book titled "Today I am a Ham," the author is Ethelyn M. Parkinson, illustrations are by Ralph J. McDonald, the publisher is Abingdon Press of Nashville-New York, and the copyright date is 1968. The plot involves the 14-year-old son of a basketball coach who is cut from his school team and subsequently finds solace on the ham bands. I'm afraid today the poor kid would be flat out of luck...

>you really shouldn't be a ham either.
>Lets raise those cushy electronic standards !!!!!
>AND GET REALLY DEVOTED!!!!
> Globber

Dear Globbey,
I have been in electronics for most of my life..I started building
transmitters and receivers over 37 years ago..I have worked in
the 2-way radio field and the broadcast field (engineering and
repair) I worked in military ECM, PMEL, as well as being
in a flight crew..I have had a 2nd Class Radiotelegraph as
well as a 1st Class Radiotelephone class license with radar
endorsement I have gone from novice and then through the ranks
to extra taking exams in person at the FCC with real exams when you
still had to explain in essay form and draw schematics...I am now a
VLSI electronic engineer designing high density propriatory Ic's and
circuit integration for biomedical robotic platforms...I still
homebrew, and love playing with boatanchors..I have a private
pilots license and do aviation radio repair part time at a local
depot..(also did some at old Dow AFB when in A&E squadron).

...oh yes by the way I spent 3 years just in South East
Asia while in the USAF.(Vietnam Era) .and not as a "road guard"
I tried never to miss more that a day on Hf ham radio, even
if it was from the cockpit of a B52..

So Globber, tell me all about my electronics side of ham radio..
It's a shame you were caught assuming so much...and we all
know about assuming don't we?
Tell me again how I'm not devoted to the "electronics side" of
radio...Then I'll tell you about presumptuous pups! I love a good
laugh....

Steve, WA2NHZ

3836. American Soldier/Ham in Bosnia

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-16 00:00:00 UTC
From: GORKOS@N440SIG.darmstadt.army.mil
Message-ID: <c107cb$61ae.1b9@luzskru.cpcnet.com>
Source record: 233826

Here's one for the legal eagles ou there:
I am an American licensed ham slated for deployment to the former Republic of Yugoslavia for Peace IFOR operations. I recently purchased an Icom IC-706 and a tuner to take with me to the region. I am mildly concerned about the laws and rules that will apply to me while I'm over there.
I have a (useful) technician-class license, meaning I know morse code, and a pair of expired CSCE's for the written general and advanced tests. I can copy the 18 wpm ARRL bulletins, but since I haven't been back to the states for 18 months, I haven't been able to upgrade. I would like to operate DX HF while over there, preferably 20 and 40 meters. I am an experienced HF operator (WAS on 20m and 10m) from my time as Chief operator at the W2KGY military station at the US Military Academy. The questions I have are:
Who's laws do I fall under for licensing? Last I heard, the Bosnian Communications Commision is a bit understaffed and, well, bombed out.
Do I fall under U.S. laws since we're there on military operations?
What call sign/prefix should I use. Has the ITU assigned a prefix for the BH republic yet? I imaging a KB5 call on 80 meters in the heart of Europe would generate quite a stir...
Does the FCC have any prosecuting authority over me should I turn out to be operating illegally? I suppose the Bosnian government could show up on my commo site one day and demand I turn off my radios, but we have an awful lot of firepower behind my measly 100 watts.. :)
What type of antenna should I use for a very windy mountaintop? I've got a pre-made G5RV fed with ladder-line (yeah, REAL hams don't buy pre-made wire antennas, right?) that seems to give good performance on 80 and 40, but I've been dissapointed with it on 20m. I have PLENTY of wire and insulators, but I really can't go outside my perimeter to string huge wire antennas (land mines and all, you know).

Any other thoughts on my military DXpedetion would be appreciated.
Please e-mail, as NNTP is irregular at my site.

Hello Jim:

jcumming@clark.dgim.doc.ca wrote on Fri Dec 15 09:45:26 1995:

>Regretably, Mr. Stark was wrong. He was wrong in that it would be impossible
>for the Canadian authorities to enforce Amercian laws in Canadian territory.
>The only laws that the courts can enforce are those that are have been enacted
>or promulgated appropriately. Therefore, visiting operators are subject to
>the rules and regulations in the territory that they are operating. In other
>words, if an U.S. operator is operating in Canada, he operates in accordance
>with our rules, not his home country. The only way that we could force a
>visiting U.S. amateur to operate in accordance with U.S. regulations would be
>to embody these regulations in the Canadian ones. This has not been done so.

I must disagree with you, even though you work for the DOC (or whatever
they are calling it these days.......

When Art Stark made this statement to me in 1979 or 1980 the requirement for
Canadian and U.S. Amateurs to obtain written authorization to operate had
just been removed. Novices and Technician Class amateurs were operating in
Canada even though there was no equivilent license class for Canadians.
We were discussing reciprocal licensing and he told me that if in doubt
apply the most restrictive regulation. I believed this to be good advice
from someone who should know, since he signed the TRCs. I still believe
it today, as demonstrated by the following scenario:

Say I operated A3 in the 40m "Canadian Phone Band" from a Canadian location
and was heard my a F.C.C. Monitoring station. I could receive a Notice of
Violation for an infraction of Part 97 in the U.S. radio regs which prohibits
me from using A3 in that part of the band. How would I reply to it? "Oh,
well, the Canadians told me it was alright to operate there....." but it may
or may not be a valid reason depending on how much of a matter the FCC
chose to pursue it. I hold a U.S. Amateur Extra Class license which affords
me all available amateur radio privileges. Here is an example of applying
the more restrictive regulation.

Also consider this: I hold a Canadian license which allows me A3 on 14.125
but I am prohibited from using this mode on this frequency in the U.S.

How would you reply to this?

>Radiocommunication Information Circular 25 (RIC-25) contains the laws and
>regulations with respect to amateur operation, including those that regulate
>the operation of visiting amateurs operating their stations in the territory
>of Canada. In effect, visiting U.S. amateurs who hold General, Advanced and
>Extra licences may operate there stations as if they were holds of a Canadina
>Basic, 12 w.p.m. and Advanced qualifications. As a result, they are not bound

>by the sub-band restrictions while operating their stations in Canada.
>Therefore, the concept that amateurs must operate in accordance with the most
>restrictive regulations is not supported in law.

I am not very familiar with the new classes of license in Canada - when I left there were three: Amateur, Amateur Advanced and Digital. The Digital was a no-code license that was introduced in the late 1970s. I tried it once and failed. I was curious to see how difficult it was - and didn't prepare for it - so I failed. It was tough! The U.S. has a "no-code" license now and I assume that the reciprocal agreement applies to these operators as well. Since my radio interests, mainly boatanchors, does not usually fit in with these operators I seldom have any contact with them. I will not air my personal opinion of the "no-code" class license. I do know that all Amateur certificate holders were "grand-fathered"to top level licensees without actually having to earn them.

Now, here is a question for you. I hold dual nationality - Canada and U.S.A. Do I have reciprocal operating rights in Canada? What about when I was a Canadian citizen living in the U.S. as a Permanent Resident Alien and had a U.S. license? Would I be allowed to use the U.S. license in Canada even though I am eligible to hold a Canadian license?

Most magazine publisher have to send their pre-printed mailing labels to
the printer a month or more before the magazine is to actually be mailed.
They can get the label changed in a matter of minutes, but getting that
label into the next batch being sent to the printer can take a while.

In article <30D14004.51DE@mmm.com>, grhosler@mmm.com says...
>Seems that the folks that want to work DX on HF and only use SSB
>forget that much of the DX doesn't speak English and far greater
>numbers of us don't speak foreign languages, yet CW still allows
>us to communicate.

Morse code is NOT a language. With the *abbreviations* commonly in use you can find out where somebody is and a few other tidbits of information but you can't discuss Descartes or even what you had for dinner because abbreviations don't exist for those things. Whether this is cmmunication or not is another question.

>We also are expected to be able to provide
>emergency communications during time of need.

More smoke, I've issued this challenge many times. Name a *modern* emergency where the *priciple* communications took place using Morse Code. Almost all emergency communication has been either voice or packet. Hmmm, maybe we *should* replace the antiquated Morse Code test with a Packet Test...

>There is a tendency
>to forget (with every 3rd car in the US equipped with a cellphone)
>that in many 3rd world countries the phone system is very poor and
>unreliable even in good times.

More smoke, most US hams don't set foot in the Third World, yet this always comes up. Wake up folks, this isn't the age of the "noble savage" anymore. You'd be hard pressed to find a corner of the world where Amatuer Radio is allowed and there isn't an active packet service. Yeah, it would be great to be able to use ham gear in Syria, but try to get a license. President Assad even licenses Fax machines, and it's hard to get a license...

>During earthquakes, floods, etc.
>those communications links are non-existant. As nice as GTOR,
>AMTOR, etc. are to use and with the error reduction capabilities
>that are written into the firmware, not all Hams have this neato
>technology. During an emergency situation communication in its
>most basic form, regardless of language, is still CW.

The air is getting rather hazy, this group need a no-smoking section. Name the place and the situation. Why are the pro-Coders so gullable sometimes and so obstinate other times? Most emergency situations in both the developed world and the "3rd World" require the use of 2 metre handtalkies, people don't have the luxury of using CW.
The (debatably) greatest impact that ham radio had on current affairs, the Yeltsin broadcasts from the Russian White House took place on voice...

>It doesn't
>have to be everyones favorite mode, but it still makes sense as
>a requirement.

No it doesn't, though packet might...

>For those who want to work HF phone and not learn
>the code,....no problem, thats why Hams gave away 11 Meters years
>ago. It all makes very little difference as the law is the law.
>Ya want the spectrum, meet the requirements! JUST DO IT!

Or lobby for change, hams should be at the forefront of technology rather
than wasting their time protecting an outdated law. The final smoke from the
pro-codes is always the thickest. When it comes to antenna restrictions
they'll fight tooth and nail and chear on the fight. When it comes to
removing an antiquated law that they like, well then "the law is the law."

Hi Greg,

I live a few miles from Oklahoma Comm Center and drop by often for a chat with Mike and Tony. They are the two guys you will most often deal with when calling on the phone. They are both knowledgeable active hams and are glad to share their experiences to help you pick out the rig that is right for you. I have never seen a better price on equipment or support for the buyer. I will admit that they are more geared for mail order than counter sales and if you walk into the showroom, you might wait awhile before they get around to helping you. If you are looking for reassurance, you have it. They are on the up and up and serious about selling you ham gear now and in the future.

P.S. - If you talk to Mike, tell him Glenn said he is a bottomfeeder. If you talk to Tony, have him pass the message to mike. o<:-)%

>Some elmer you would make. Great encouragement. I sure am glad that the hams
>in my area don't live in the stone age, but I guess that we aren't "real
>hams" by your standards. Have a nice day, 73 (oops do I have to be a "real
>ham" to say that?).

I agree. I am a no coder myself. I have every intention of upgrading someday, but right now school takes up most of my time. The way some hams talk about us Technicians makes me wonder if I really want to upgrade so that I can spend my time talking to these people. I know that not all Hams that know the code (not Call ATT or whatever) have the same
opinions on this matter, but those that do seem to be pushing prospective new hams away. With the stuff I am learning in my electronics classes the only thing standing in my way of Extra class will be the code, which I don't have time to devote to right now.

The scary part is that when I first got my license I had no intention of using HF, but after
helping my father (AA1LR) figure out his first HF rig and playing with it a little bit, I decided
that learning the code is not that bad a price to pay for those priviledges. Plus code does have
a few applications that are still worthwhile.

3851. Stupid Ramsey Tricks

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-17 00:00:00 UTC
From: jdc@cci.com
Message-ID: <DJpMs9.IFr@sunsrvr6.cci.com>
Source record: 233641

Thanks to KE2DI for catching this one...

On page 3 of the new Ramsey catalog, check out the "FM-6 Crystal Controlled FM Wireless Mike Kit...$39.95." To quote the catalog:

"For super stable drift free transmission, the FM-6 is the ticket! Most low cost FM mikes are tuneable... The FM-6 frequency is set by a crystal of 144.00 MHz, easily picked up on any scanner radio."
^^^^^^^^^^
A toy wireless mike on the 2-meter band. In the weak signal part, too. What will they think of next? It gets even better...

"Changing the crystal allows you to change frequency anywhere in the 140 to 160 MHz range..."

Hey kids, let's put it on a public saftey frequency. For more Stupid Ramsey Tricks, check page 26, 'Yagi Antennas'... Covers 140-300 (!) or 300-500 (!!) MHz. "Talk about a match, even our $1800 EMI antenna couldn't come close to one of Joe's antennas." Of course the EMI antenna is made for flat response, but why let facts get in the way?

And on page 24 they still carry the PA-1 2-meter power amp kit. This gem is a 40 watt class C amp with almost no output filtering.

73..Jim N2VNO

3852. IPS Daily Report - 17 December 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-17 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <4b28gm$seg@flare.syd.ips.oz.au>

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 DECEMBER AND FORECAST FOR 18 DECEMBER - 20 DECEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 069/003

GOES satellite data for 16 Dec
Daily Proton Fluence >1 MeV: 1.7E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.1E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Dec 19 Dec 20 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Dec: 068/002

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled with active levels
15-18 UT.

Estimated Indices : A K Observed A Index 16 Dec
Learmonth 12 2223 3432
Fredericksburg 09 19
Planetary 07 19

Observed Kp for 16 Dec: 3553 4212
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 Dec 8 Mostly quiet.
19 Dec 5 Quiet
20 Dec 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
17 Dec Normal Normal Fair-Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Dec Normal Normal Normal
19 Dec Normal Normal Normal
20 Dec Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
17 Dec 16

Observed Australian Regional MUFs:
Townsville: Near predicted monthly values with sporadic E
observed 06-10 and 18-22 UT. Spread F may have degraded
communications 11-14 UT.
Sydney: Near predicted monthly values with 20% enhancements
00, 09-11 UT. Sporadic E was observed 00-03, 06-13 and 21-23 UT.
Hobart: Near predicted monthly values with 30% depressions
15-16 UT. Sporadic E was observed 02-03, 07-11, 18 and 21-22 UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
18 Dec 15 Near predicted monthly values. Sporadic E is
likely in the Australian region.
19 Dec 15 Near predicted monthly values
20 Dec 15 Near predicted monthly values

Newbie or not, I didn't have an answer for him so I didn't feel it
was a good idea to respond. What's the point in telling him I didn't
know?

Once I heard that HAM is what the commercial stations used to call
amateur operators back when they were trying to get us off the air.
I have no proof though.

James A. Doty

The following is a QST

TOR FLOAT HAM STATION

Amateur radio will be part of a Southern California tradition. A
live ham radio station will be operated from a float in 1996 Pasadena
Tournament of Roses Parade. The Edison Amateur Network has accepted
an invitation from the Southern California Edison utility company to
install a ham radio transceiver on board the company's float. The
station will be operated by Jim Walls, WB6WMW.

This will be one of two special event stations planned by the club
to help usher in 1996. The other is an ongoing event from Fiesta
Parade Floats in nearby Azusa. That station will be on the air every
day that S.C.E. personnel are at work finishing the Company float.
That means every Saturday until Christmas and then daily until New
Years Eve. Both stations will use the club callsign WB6UCD.

This is only the second time in the history of the Tournament of Roses Parade that a ham radio station has operated from a parade float. Back in the 1980's, Pete Hoover, W6ZH operated a Ten-Tec high frequency transceiver from a float. The first ham to transmit a signal from a float, though not on the ham bands, was Howard Lang, WB6UFM. In 1986, Howard donned a Davey Crockett costume so he could operate a point to point broadcast remote microwave transmitter tied to a television camera for KTTV television. The pictures Howard relayed back for the first time gave viewers at home a float rider's eye view of the parade.

(*****
FORM 610-V

A form many amateur radio operators have been anxiously awaiting, Form 610V is now available. 610V is the application for Vanity callsigns. In response to requests by radio amateurs, the American Radio Relay League has mailed 9,000 copies of the form. If you requested one from the League and don't receive it by December 16th, call area code (860) 594-0300. There is one big catch to the new form's availability. While you can obtain a copy, you still can't turn it in, that's because the FCC is not yet accepting 610Vs for filing. The Commission is expected to announce opening dates for the first vanity callsign filing gate in early 1996. You can obtain FCC Form 610V, along with FCC vanity callsign information fact sheet PR-9000 number 206V by writing to the ARRL. The League's address is 225 Main Street, Newington, Connecticut 06111. Be sure to include a self addressed stamped envelope. You can also obtain Form 610V from the Internet at http://www.FCC.gov/forms/form610V. The Commission's Forms Distribution center will accept orders in about a month, you can call the center at 1 800 418-3676.

(*****
SHURE OBIT

The inventor of the modern microphone has died. Sidney N. Shure founded the Shure Radio Company in Chicago back in 1925 as a parts supplier for early radio experimenters. The first microphone produced Shure produced was a twin-button carbon unit in 1932. Five years later, Shure developed the first modern noise canceling microphone followed a year later by the first magnetic based microphone. By 1939, Shure had invented and patented the Unidyne which was the world's first single element directional mike. The company became Shure Brothers Inc. in 1928. When the government needed huge quantities of high reliability shock proof microphones during World War II, it turned to Shure as one of its primary suppliers. Responding to the need, Sidney Shure recruited and trained hundreds of new employees in a program he called "Microphones are weapons of war." After the conflict ended, the government commended the company and Mr. Shure with three joint Army-Navy awards for excellence in service to the nation.

After the war, Sidney Shure continued building all of the company products to strict military specifications. This includes the microphones used by ham radio operators over the years. Sidney Shure died in Evanston, Illinois October 17th at the age of 93. He's survived by his wife Rose and two children.

(*****
RSGB SATELLITE FUNDS

The Radio Society of Great Britain has once again said yes to the Phase 3D ham radio satellite! According to a recent GB2RS bulletin, Society President, Clive Trotman, GW4YKL, has presented a cheque for 25,000 Pounds to Ron Broadbent, G3AAJ, of AMSAT-UK. This, in support of the AMSAT Phase 3D satellite project. In addition, the Society's Council has agreed to make a further contribution of 25,000 Pounds on condition that AMSAT-UK raises a similar amount from other sources.

(*****
ARRL AWARD FEES

A new fee schedule for ARRL operating awards takes effect January 1st, 1996. Some fees are unchanged...some rise from 1995 levels, and some are new. The new schedule is based on policy developed by the Board's Membership Services Committee and approved by the Board's Administration and Finance Committee. The goal is to come close to breaking even with the costs of offering awards. In many cases in the past, the League recovered the cost of postage for mailing an award and returning QSL cards, but absorbed the costs of printing the certificates and of administration.

(*****
EXAM DAYS

The 1996 ARRL Spring and Fall National Exam Days will be April 27th and September 28th and 29th. Details will appear in the January issue QST magazine.

(*****
SECOND NEWSLINE WEB AUDIO SOURCE

A second World Wide Web site now offers an audio version of Newsline. This one has been put on line by Hank Armstrong in Santa Clarita, California using I-WAVE technology from Vocaltec. Hank says the fidelity is excellent. You can find out for yourself by visiting the site at http://www.smartlink.net./~hca3. If you missed that rather complex Universal Resource Locator you can send an information request to Hank Armstrong via the internet. His e-mail address is easy to remember. It's simply Hank@Hank.com.

(*****
FCC BOOK ON THE INTERNET

The FCC Interference Handbook now is available on the Internet. The 22 page booklet, available from the Compliance and Information

Bureau via the FCC World Wide Web home page, includes the same information and illustrations contained in the recently published Interference to Home Electronic Entertainment Equipment Handbook. It includes information about equipment installation, identifying interference sources, curing interference problems, and filters. You'll also find a list of home electronic equipment manufacturers and telephone numbers. Pictures illustrate different TV interference problems, including ham or CB transmitter interference.

(*****
EAS DEADLINE EXTENDED

The FCC has extended the deadline for implementation of the new national Emergency Alert System to January of 1997. The original deadline was July 1st 1996, but the Commission gave into broadcast industry pressure and has granted the time extension. In filings before the FCC, broadcasters argued that the July date did not give them adequate time to equip all stations for the switchover. The EAS is the first alerting system crafted to include private communicators in its operations. The Emergency Alert System replaces the old Emergency Broadcast System or EBS which is a hold-over from the cold war days.

(*****
HANDI HAM CAMP DATE CHANGE

Newsline correspondent Linda Reader, N7HVF reports a date change for the 1996 Handi Ham California ham radio camp. Linda says the new date is March 3rd through the 10th. This is several weeks later than in past years and breaks a long standing early winter tradition for the camp. If you'd like more information on the camp out or the Handi Ham assistance program for the disabled, you can write to the Courage Handi Ham System, at the Courage Center, 3915 Golden Valley Road, Golden Valley, Minnesota 55422.

(*****
NORTH TEXAS BALLOON PROJECT QRT?

Has the North Texas high altitude ham radio balloon project come to an end? Doug Howard, KG5OA says via the Internet that it's unclear if or when another amateur radio balloon will be launched by the group. Doug says it appears the interest level has declined to a point where the project may indeed be complete. He notes that there is still a substantial audience around the country for the project, but adds that it takes a large, committed effort from a big group of people to actually make a mission succeed. Maybe we'll launch again, Howard says, maybe not.

(*****
DX

In DX, the old XZ1A equipment remains in place on Mayanmar with activity by OH1NYP and OH2BH expected in January. They will

concentrate on 160 and 80 meters. XZ1A cards are expected to be in the mail by early January.

And the European PacketCluster shows YA9XL in Afghanastan on 40 meters between 17:30 and 22:30z. The operator says to QSL via F5TCN. A station with the call sign A51JM claiming to be in Bhutan may be a pirate. He was only on once on C-W and those who worked him say they had to point beams to location other than toward Buthan.

And look for Kermedec Island on the air next year. ZL1AMO, and a group of other New Zealand operators plan to be active in May 1996. Landing permission has already been granted.

Finally, word that the new officers of the Northern California DX Foundation include Eric Edberg, W6DU as President Len Geraldi, K6ANP as Vice President Jack Troster, W6ISQ as Secretary and Bruce Butler, W6OSP as Treasurer. The Foundation is well known for its financial support of DXpeditions, worldwide.

(*****
MIR QSL NEWS

This quick note. Dave Larsen, N6JLH, is now the new QSL manager for the USA for all Mir space station QSL cards for the call sign R0MIR and R0MIR/1. All older call signs have to go to Russia.

(*****
GET WELL ART

If you have ever used a ham radio repeater, then you owe a debt of gratitude to a California ham named Arthur M. Gentry, W6MEP. Back in the late 1940's Art Gentry began experimenting with advanced receiver designs of that era that led to the development of the first practical ham radio repeater. His system, using the call sign K6MYK, came on the air in the early 1950's from atop Mt. Lee. That's the hill overlooking Los Angeles that is home to the famous Hollywood sign. Every repeater on the air today can literally trace its ancestry back to the early experiments of W6MEP. But time has taken its toll on Art's health. A few years ago, he turned over the day-to-day operation of the system to his longtime friend Bill Arens, N6NMC:

"Art just recently had surgery and since had to go into a rehabilition facility in order to try and get him to learn how to walk again. He is 89 years old. Let's face it, at that age we don't recover quite as quickly as when we are younger."

As Christmas approaches, it occurs to Bill Arens and to us here at Newsline that it might be a nice gesture for all of those hams who use repeaters for day to day hamming to take a moment to express their gratitude to W6MEP:

"If everybody who uses a repeater today would appreciate the fact that Art was one of the forefathers of ham radio repeaters. One of

the first in the world, commercial or otherwise, to put a repeater on the air. And all the red tape he had to go through with the FCC. The little beep tone you hear on a repeater, he is the one who invented that. Simple things, everyone out there using a repeater, if you would just send him a QSL card, a Christmas card, anything. He is good in the callbook. I'm sure it would mean a lot to him."

Please take a moment to jot down your wishes to art for his speedy recovery. Send your card to:

Art Gentry, W6MEP
7832 Jellico Avenue
Northridge, California
91325

We at Newsline join with Bill Arens, N6NMC and the user base of the

W6MEP repeater in wishing our longtime friend Art Gentry a speedy return to good health. We also will add that if Art had not invented the practical ham radio repeater, you probably would not be listening to Newsline right now.

(*****

And for this week, that's all from the Amateur Radio Newsline. You

can write to us at:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

For now, with Bill Pasternak, WA6ITF, at our editor's desk, we say
73
and thank you for listening, and the best of the holiday season.

SB DX @ ALLBBS $OPDX.234
Ohio/Penn DX Bulletin No. 234

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 234
BID: $OPDX.234
December 18, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB3JFS, KK6H, W6/G0AZT, K8UNV, NW8F, DF4RD, JA1IDY, LX1NO, PA3GBQ, PY7ZZ, R3/W0YR, G4BUE & DX NEWS SHEET, DL9GOA & DXNL and VS6WV the following DX information.

5H, TANZANIA. Giovanni, I5JHW, will be active from Zanzibar Island (IOTA AF-032) using the call 5H1HW from January 1-9th. He will be active on all bands (including the WARC bands), CW, SSB and RTTY. QSL via homecall.

9G, GHANA. Steve, PA3GBQ (a member of the contest group PI4COM), is going for a little holiday to Accra in Ghana from December 31st to January 15th (1996). He will be visiting 9G1BS and will be using his station. Steve will be active on all bands, but his main emphasis will not be ham radio. He also reported that his callsign will probably be 9G5BQ (but it has not been confirmed yet). QSL via his homecall, Steve van Lieburg, PO BOX 85090, 3009 MB Rotterdam, The Netherlands.

CE0, SAN FELIX. The DXNS report that CE3HJB and CE3CDV are planning an operation in 1996 and are seeking loans of equipment and financial support.

INDIAN OCEAN DXPEDITIONS. Akio, JA3JM, will be active December 18/-24th from Mauritius, as either 3B8/JA3JM or 3B8/AA5K. Activity will be CW/SSB, RTTY plus satellite operations on AO-10/13. Look for him on all bands including the WARC bands and 160 meters. Akio will also be active from Comoros (D6), between December 26th and January 1st as D68AS. There is a possibility for him to be active for a few days (December 28-30th) from Mayotte (FH) as FH/JA3JM. Also, look for Akio on Reunion Island (FR) between January 2nd and 5th, as FR/JA3JM). QSL via homecall.

JA1OEM AWARD. Mr. Mako Toyofuku, JA1OEM, issues "JA1OEM AWARD" which is commemorating his DXpeditions to 20 different countries since 1988. Mako started his first DXpeditions after 64 years, and is now 73 years old. During all his DXpedition, Mako has carried all the heavy

equipment and installed all the antennas for himself. To receive the award, the requirements are: 1) More than 3 country QSOs contacts. 2) A copy of QSLs (exclude WH6 and OX). 3) 1 IRC. Please send the appropriate QSO data to P.O.Box 9, Sawara-City 287 Japan. Mako will present 10 to 100 IRCs for applicants in order of QSOs. The deadline for application is February 20, 1996. The callsigns of his DXpeditions are as follows; A35EM, ZK1XP(ZK1XH) South, ZK1XP North, HV3SJ(HV4NAC), JT1/JA1OEM(JT2) 5R8DP, 3D2TO, FO0TOH, 8Q7HP, ZK2HP, S79HP, 9N1HP, 4U1ITU, 5W1HP, 4S7/JA1OEM, JD1/JA1OEM, H44/JA1OEM, FR/JA1OEM, WH6/JA1OEM, OX/JA1OEM

LU6, SOUTH ORKNEY ISLAND. LU6Z has been quite active on 40 and 80 meters. Look around 7005 kHz beginning around 0230z or 3505 kHz around 0500z (sometimes as early as 0245z). The LU6Z station is active from Argentinian Antarctic Base Navy Orcadas located on Laurie Isl. QSL via LU6EF.

NEW QSL MANGER. Cecil, NW8F, reports he is now the QSL Manager for Millie, 9L1MG. Millie is the wife of Paul, 9L1PG. They should be back in Freetown by the time you read this. Look for Paul and Millie on the bands on Monday, December 18th. Cecil also reports he is receiving cards with no return postage and states he will return there cards via the bureau.

NEW QSL ROUTE. Norby, LX1NO, states the new QSL route for Jamil, OD5PN, is via LX1NO. Norby reports that his address listed in the 1996 callbook is WRONG, but is listed correctly in previous callbooks. Any mail sent to the 1996 callbook address should be considered as being lost. The only correct mailing address is: Norbert Oberweis, 5, Cite Oricher-Hoehl, L-8036 Strassen, Luxemburg. Norby holds logs for the following station: LX1NO, LX9EG, LX4A, LX1JAZ, LX0SNJ (to be closed soon), KM6RY, LX50V, LX75LGS, LX95VEC, S5/LX1NO, R6/LX1NO, T94NE, and OD5PN.

PY0, FERNANDO DE NORONHA ISLAND. Fred, PY7ZZ, will be operating from here until December 20th as PY0FZ. He will be happy to give a new band country to as many as possible because he will be active on all bands including 160 meters. QSL via PY7ZZ, Fred Souto Maior, Rua Almeida Belo 241/302, Bairro Novo Olinda PE 53030-030, Brasil.

QSL CARD UPDATE. Eddie, W6/G0AZT, reports QSL cards for VK9LZ (RTTY), VK9LX (CW) and VK9NM (SSB) from Lord Howe Island should be in his hands by December 17th and he will begin sending QSL requests out on the 18th. SPECIAL NOTE from Eddie: Please do not send QSL requests for the September 1995 operation to W6XD. If you have already, no problem, they will be forwarded to him, so do not send duplicate requests. Cards via the bureau go to W6OTC. Any cards already sent via the bureau to W6XD, will also be re-directed. DIRECT MAILING address; Eddie Schneider, P.O. Box 5194, Richmond CA 94805. Please include an SASE or SAE with postage.

QSLS FOR IG9 OPERATIONS. (FROM Mike Lonneke R3/W0YR - Moscow) Mike spoke by phone with Andy Melanyan, UA3DPX, one of the operators on the IG9 operations. Andy says cards for the operation are being printed in Sicily and are being sent out to various bureaus world-wide. He said it is not necessary to send a card and that cards will automatically be sent out

when they are printed and processed.

VK0, MACQUARIE ISLAND (AN IMPORTANT UPDATE). There was an announcement this week that VK4ATS is no longer the QSL manager for VK0WH, but that his new QSL Manager would be VK9NS. Paul, KK6H, was able to confirm this information and has received a fax from Jim Smith, VK9NS, on December 16th at 0109z, were Jim states the following:" 1) True I am his manager with immediate effect. Expect to have cards printed in say about two weeks. Warren, VK0WH, will fax his log to me on a monthly basis. 2) I recommended that he change frequencies - there is no point him being on 14.130 as the states can't touch him there. Note he only has limited capability - he does not have a rig with him. I have suggested and he has agreed as follows: 7.010 CW, 14.040 CW (IOTA frequency) and 14.260 SSB (IOTA frequency). 3) I expect to be in close touch with him as I can telephone and fax him. He came up on sked last night (15 Dec) at 1000 UTC. 4) May I stress that Warren is not a DXer but it is a big plus that he can work CW - Macquarie is badly needed on this mode. He will need every bit of co-operation he can get from the DXers chasing him on SSB or CW. 5) QSLing rules are very simple - an SAE and return postage is a must and in return I promise a very quick turn around on cards. Do not re-QSL any QSOs it should not be necessary.
Oh yes another very simple rule - The only card(s) in the envelope should be for VK0WH - please, please spare me the multi-log routine."
HI de Jim VK9NS.

XU, CAMBODIA. Mike, VS6WV, expects to be in XU-land quite often in the future. His next trip will be the week of January 8/9th. Mike will be using the callsign XU6WV. He will announce more information a few days prior to his actual departure for Cambodia. During the January trip, he will probably be active mainly on 40/80 meters CW. 160 meters is a possiblity. Stay tuned.

ZF, CAYMAN ISLANDS. Carlo, I4ALU, will be active from here between December 25th and January 3rd. Listen for him 13 kHz from the band edge and on 10103, 18070 and 24893 kHz.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Sounds like a good way to promote packet and get support of the
amateur community to develop a network. I get sick and tired of
the attutude that it is going to be my way or no way. These
issues need to be worked out instead of cutting people off.

>of regs are more restrictive.

Does that mean that an European operator cannot use the repeaters on
146-148 MHz, or the repeaters on 440-450?
(neither of these frequencies are allocated in region 1)

I think that the wording is a little different..

Geert Jan

1.0 What is BASIC Stamp ?

```
-------------------------
```

This is being written for people who have no idea of what a BASIC Stamp is...

BASIC Stamps are small reprogramable single board computers (SBC) that run BASIC programs and are made by Parallax, Inc. in US. At first glance, they may seem fairly minimal - and in fact, they are. But with software that fully utilizes all available hardware, the Stamps give you powerful features - without the cost of hardware.

Their low cost and simplicity make the Stamps perfect for many prototyping and control applications. It's suitable for electronics hobbyists as well as electronics professionals in many different areas.

Typical application areas for BASIC Stamp's are...

- General electronics
- Home automation
- Robotics
- Mini PLC
- Education
- Prototyping
- HAM related applications
- Special effects in films

- Industri control
- Geological instruments
- Computer peripherals
- Scale model hobbyists

As an talent engineer and technical writer expressed it...

- BASIC Stamp is the 555 of the 90's !

1.1 What is L.O.S.A all about ?

I started to compile L.O.S.A because I know there are lots of great ideas and many problems that are solved with the BASIC Stamp and the main purpose of this list is to get an idea of what other people are using their BASIC Stamps for and maybe get some inspiration or hints.

Remeber it's up to all of us if this list are going to be any good and I'm looking forward to receive a description of your application.

1.2 How can I contribute to this list ?

If you have done something with the BASIC Stamp (big or small) that you are willing to tell others please use the form given below and write a short description, nothing fancy is needed just a simple explanation. If you have source code to share that's even better but it's not necessary.

Then e-mail the form to:

cj@algonet.se

With the following as the subject:

L.O.S.A Contribution

Or you could point your Web-browser to the following URL and fill in the L.O.S.A form on the Web-page...

http://www.algonet.se/~cj/losa.html

==========
Title : Robo-Cat [# 001]
==========
Date : 950807
Author: Gustavson Guy W.
E-mail: GWGUSTAVSO@mpg.norstan.com

Stamp model : BASIC Stamp Rev. D
Code available: N/A
Filename : N/A
URL : http://www.winternet.com/~bigfoot/cat.html

Description :

My cat, Kesha, was recently diagnosed with Heptic Lipodosis. Or
"Fatty Liver", basicly what this means is that for some reason he
stoped eating and his liver started converting body to useable
sugars. The fat deposists biuld up in the liver and cause severe

liver damage. Because the liver isn't working well the cat feels crappy and wants to eat even less. The treatment for this disease is to run a tube down down the cats nose into his stomach, or a PEG tube through the abomine wall into the stomach and feed the cat a liquid diet this way.

I love my cat, but I can't be there every three hours to feed him through the tube for a month. Something about work and deadlines and such. So I went to a local supplus house and got a tiny motor driven pump, a case, some switches, a micro switch, ect...

The micro switch is mounted such that the switch trips for every rotation of the pump shaft. The stamp turns on the pump for on a single rotation at intervels programable from the controll switches on top. An alarm buzzer and LED flash if the pump fails to run for any reason. The unit is programable for 9 differents deleviery rates.

Now he gets a slow continuious feeding and he seems to tolerate this better than the 100ml feeding every three hours.

==========
Title : Logic Rudder [# 002]
==========
Date : 950812
Author: Christer Johansson
E-mail: cj@algonet.se

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : LRUDDER.ZIP
URL : http://www.algonet.se/~cj/filelibrary/BS1-IC/

Description :

Many of the new and very realistic flight sims available today needs rudder to let you get full control. This one uses a digital pot from Xicor (X9104) and 10 other components. Connects to a standard IBM-PC game port and power is taken from the port.

It uses two micro switches for controlling the rudders left or right and to indicate when rudders move there is a red LED that lights up when you press the micro switches and to indicate center there is a green LED. If you press the both micro swithes the rudder will automaticly return to center position.

There is a trim pot to set the desired step rate from slow to very fast and the Xicor pot has 99 steps wich gives a fair resolution.

==========
Title : Interfacing MAX186 8 channel 12bit A/D [# 003]
==========
Date : 950925
Author: Helmut Fligge

E-mail: h.fligge@asco.nev.sub.de

Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : N/A

Description :

This Program interfaces the Stamp1 to the MAX186 A/D converter. Via RS232 2400bps the stamp is asked to measure channel numbern. After conversion the result will be returned to the host computer as an ascii string (0 .. 4096). Conversion rate is about 4 measures per second.

==========
Title : Scrolling LED Sign [# 004]
==========
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org

Stamp model : BASIC Stamp Rev. D
Code available: Maybe sometime
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html

Description :

Scrolling LED sign, 35 super-bright LEDs in a 5-by-7 matrix in the prototyping area of a Basic Stamp rev D. A scrolling alphanumeric message moves one pixel at a time, just like real scrolling LED signs, except this one only displays one full letter or portion of two letters at a time as the message moves by.

==========
Title : Tone Decoder [# 005]
==========
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org

Stamp model : BASIC Stamp Rev. D
Code available: Soon
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html

Description :

Listens for telephone touchtones, displays phone numbers on LCD screen and echos them out RS-232 port. Circuitry fits in prototyping area of rev D Basic Stamp:

Microphone preamplifier, touchtone decoder IC.

==========
Title : Pager [# 006]
==========
Date : 950928
Author: Don McKenzie
E-mail: donmck@tbsa.com.au

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : PAGER.BAS
URL : ftp://ftp.parallaxinc.com

Description :

This program for the Basic Stamp is used to monitor 4 hardware signals. If a change takes place, (after testing for a false trigger) then a cheap 2400 baud MODEM is used to dial into a Telecom Alpha-Numeric pager. It leaves a message which consists of a 2 digit I.D. (01 to 99) followed by the 4 signal levels of pins 3 to 0.

Status of the signal levels message: 0=Low, 1=High. EG: "011110" means Unit "01" has pins 3, 2, and 1 high, and pin 0 is low.

A "Ring-In" feature is also included. By ringing the MODEM for a short period, then hanging up, the Stamp will dial your Pager and report the current hardware status of these four signals.

This program uses about half of the available memory, so if the user wishes to add enchancements such as "Multiple Ring-In's" say within a minute, for a command selection, there is plenty of program space left.

==========
Title : HexWalker Mobile Robot [# 007]
==========
Date : 950929
Author: T. R. Thornton
E-mail: mandtsys@ix.netcom.com

Stamp model : BASIC Stamp Rev. D or BS1-IC
Code available: YES
Filename : WALK.BAS
URL : N/A

Description :

HexWalker is a six legged mobile robot that is controlled by a BASIC Stamp or BS1-IC, and driven by three servo motors (similar to Futaba S148). It is the simplest walking machine architecture that can walk forward, backward, and turn left or right.

```
=============================================================================
Title : Robo Bug [# 008]
=============================================================================
Date : 951003
Author: David Novick
E-mail: dkn@cimar.me.ufl.edu
-----------------------------------------------------------------------------
Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : http://www.me.ufl.edu/~dkn
-----------------------------------------------------------------------------
Description :

Using two stamps, a robot with six legs (2 degrees of freedom each)
was able to walk and turn (at this stage, not very gracefully).

=============================================================================
Title : EXPBOT Robot controlled by Stamp [# 009]
=============================================================================
Date : 951009
Author: Marvin Green
E-mail: marvin@agora.rdrop.com
-----------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : EXPBOT.BAS
URL : E-mail author and he will send it
-----------------------------------------------------------------------------
Description :

This program allows a cool robot to move abound a room in search of
light. Like a moth. Simple program changes can dramatically change
the robots behavior.

=============================================================================
Title : Andrews Ever Evolving Lego Robot [# 010]
=============================================================================
Date : 951119
Author: Andrew H. Hochheimer
E-mail: softarts@ciaccess.com
-----------------------------------------------------------------------------
Stamp model : BS2-IC
Code available: YES
Filename : N/A
URL : http://www.wincom.net/~softarts
-----------------------------------------------------------------------------
Description :

Currently the robot can only navigate to the brightest light source
in a room. It's current operation mode has four major steps: - Scan
a 180 Degree Field of "Vision" taking light level readings, and
determining the brightest direction of light. - Decide if it needs
```

to turn left, right, or continue moving forward. - Check for collision with an object while moving, if a collision occurs, display the total travel distance on the display - Move forward for 1.5 Seconds and then repeat the process.

Currently I am using Two Futaba FP-S128 Servos (any RC Car Servos would work) one to sweep it's "sensors" form left to right, and one to "stear" the robot.

You can see pictures and more information on my homepage, just follow the lego robot link.

==========
Title : Factory Monitoring System [# 012]
==========
Date : 951120
Author: Paul Willemse
E-mail: pjwill@merlion.singnet.com.sg

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : N/A
URL : E-mail author

Description :

The system presently consists of 4 Basic Stamp units. Each monitors up to 5 inputs. The inputs are 'digital' (switches) and/or analog (temp, airflow, current, etc using commercial sensors). All stamps communicate the results via serial mode to a Macintosh (Yes a Mac!) where the results are graphically displayed and monitored. Alarms are set for certain conditions.

The transmission is simple, one way only. Each stamp sends the info at a 'random' interval not exceeding 2 seconds. The message format is fixed, the Mac will throw away any conflicts in case two or more stamps transmit at the same time. BTW this happens very seldom. The max time any stamp can be 'absent' from the chain before an alarm is raised is six seconds (failure, transmission collisons, etc). This is controlled by the Mac.

The 'system' is presently in beta test, the client wishes to expand up to 20 stamps. At that point we will likely use the BS1-IC or BS2-IC on custom boards located around the facility.

Code is available upon request (e-mail) partial, some is proprietory to my client.

==========
Title : Wave to the Cats/Desk Temperature [# 013]
==========
Date : 951121
Author: Paul Haas

E-mail: paulh@hamjudo.com

Stamp model : BS1-IC
Code available: Yes
Filename : See web server
URL : http://hogwild.hamjudo.com/cgi-bin/stamp

Description :

The Stamp has a serial connection to web server, a cardboard hand, a servo motor to move the hand, and a DS1620 thermostat chip to measure the temperature. The web server can request the current temperature or start the hand waving. See the web page for the source code for the temp and the web server.

It's mostly useless. The cats ignore the hand. A few people find it entertaining.

==========
Title : Gamer's Die Roller [# 014]
==========
Date : 951122
Author: Larry Tremblay
E-mail: ltremblay@domus.com

Stamp model : BS2-IC
Code available: N/A
Filename : N/A
URL : N/A

Description :

The Gamer's Die roller is a little thing I am putting together as my first Stamp Project. The Roller allows cumulative rolls of n dice up to 256 sides, so long as the sum does not exceed 99,999,999(!)

It uses two 74HC161 4 bit counters cycling at 1MHz to draw random numbers off of. Input is achieved via a Grayhill model 38 keypad and a 74C922 keypad decoder. Display is on a Siemens PDSP-2111 8 character smart display (5x7 LED characters) fed by two 74HC164 serial to parallel shift registers cascaded so I can use Shiftout to feed 16 bits of control + data off of 2 pins.

The code is very simple, the most exotic part being the random number generation. In a nutshell, it is:

Begin Loop
S = 8 bit number drawn from the counter (random)
if S < (255/N) x N (integer divide, N is number of sides on die)
exit Loop
End Loop

This gets (pseudo) random numbers whose average is not skewed downwards by the counter's max of 256 (i.e. a 100 sided die is not affected by the extra 56 in the count maximum)

Using gamer's dice notation, (5d6 = sum of 5 six sided dice, 3d10 = sum of 3 ten sided dice), the user can input whatever combination they wish, including just 'd6' for one six sider. The keypad I have has removeable keycaps with legends, so I have 0-9 plus 'd' and '=' on them.

As noted earlier, since I am using an 8 bit counter, the maximum die size is 256, although that could be fixed easily by sampling two, three or more times for each die.

Anyhow, that's it. When the code is done and debugged, I'll be happy to e-mail it to any who want it.

```
==========================================================================
Title : Stamp II Serial I/O [# 015]
==========================================================================
Date : 951128
Author: John Hansknecht
E-mail: Hansknec@cebaf.gov
--------------------------------------------------------------------------
Stamp model : BS2-IC
Code available: Yes
Filename : HAL01.bs2 and HAL01.bas
URL : ftp.parallaxinc.com
--------------------------------------------------------------------------
Description :

A bare-bones demonstation of 2 way serial communications between a
PC running Qbasic and 1 or more Stamp II's.

==========================================================================
```

1.5 Credits and other things

Credits should go to all of you who makes this list possible I hope it suffices to say "Thank you to all who have contributed to L.O.S.A - we all appreciate it."

Special thanks to all of you at Parallax, Inc. who makes and support this great products !

If there is anything you think I've missed (or spelled wrong <g>) I would love to hear from you so we could make this list even better.

You could reach me at the following e-mail address: cj@algonet.se

Stay tuned,

/Christer

Why?

Becuase they say from their 13 years experience that 9612s are not true G3RUH
standards and suffer for it by very bad throughput.

The Bit Error Rate test with the KPC-9612 against G3RUH (which is used in the
Kantronics Data Engine) show this to be incorrect. I'm not sure what figures
"they" are quoting - if any - to support this claim. In the real world
networks using mixtures of KPC-9612, Net/ROM (in whatever tnc), G3RUH or K9NG,
there is NO SIGNIFICANT difference in throughput - assuming the user has
properly adjusted their equipment.

Gee, most of the contesters I know around here don't look like that at all. Not all young, many are though; they stay in reasonable shape, recognizing that you need to be in pretty good condiiton to work the 48 hours of a big contest. One local contester is a runner and enters a lot of the regional road races. They contest sitting down, of course, but in between they have lots of other things to do, often involving climbing one or two hundred feet of aluminum at a time to attempt yet another improvement in their station. Some of these guys are not just active contesters, but national or international winners.

I'm sure there are contesters like those you describe, but there aren't too many around here.

> My question is: How can you calculate the needed bandwidth by knowing
======
> only the baud rate?
====

If you are interested in the minimum _needed_ bandwidth, this restricts
the choice of modulation method to a few spectrally efficient methodes,
with quite similar figure-of-merrits.

> Could it be this: x baud = x Hz ? For example, transmission speed =
> 1200 baud, means badwidth of 1200 Hz?

The figure of merrit is usually 1.0 to 1.6 Hz/baud, so for a 1200 _baud_
system, the _needed_ bandwidth is something between 1200 Hz and 1920 Hz.

Note that if you are actually talking about 1200 bit/s systems, the figure
of merrit for 2 level systems are usually 1.0 to 1.6 Hz/bit/s and for
4 level systems 0.5 to 0.8 Hz/bit/s or in this case 600 to 960 Hz.
Usually, the figure-of-merrit is expressed in Hz/bit/s and not Hz/baud.

> Actually I don t know if my question is located in the right newsgroup
> here, but I think my question can be answered from a (PR) HAM operator.
> Essential knowledge only ... :)

However, if you are interested how much bandwidth is _used_ by the
current 1200 bit/s AFSK (F2E) packet radio system, then this is a
completely different question.

The modem in the TNC was originally designed for the 300 Hz to 3400 Hz
telephone circuit and when this audio signal is used to modulate the
FM-transmitter, the occupied bandwidth is practically the same as for
normal speech (about 16 kHz when 25 kHz channel spacing is used). Since
two level modulation is used, 1200 bit/s is 1200 bauds, the figure-of-
merrit is 13.3 Hz/baud or 13.3 Hz/bit/s.

This system uses about 10 times more bandwidth than is really needed
for 1200 baud transmission and since the receiver bandwidth is so wide,
10 times more transmitter power is required compared to the optimum case.

I do not know if you wanted to know how much bandwidth is really needed
or how much is actually used, but I hope that this has answered both cases.

Source record: 233767
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

A couple of folks have suggested here that the operator
"answering" a reverse-phone patch becomes the control
operator of the repeater and that the control link is
via the input frequency. If the repeater is on 2-meters,
this method doesn't pass muster with FCC. Here is why.
--
1. During third-party traffic, there must be a control
operator present at a control point. [97.115(b)(1)
and 97.109(e)]
2. The control point may be local (at the repeater)
or remote (via wireline or radio). [97.109(b) and (c)]
3. If the control link is via radio, the control link
must use an auxiliary station. [97.213(a)]
4. An auxiliary station must operate above 222.15MHz.
[97.201(b)]
5. The input frequency of a 2-meter repeater is
below 222.15MHz, thus it fails point 4, and the whole
idea falls apart.

I never said that I am looking for a handout. I just get sick of people looking down upon me simply because I have not upgraded yet. The reason I used to have the time to do things like study for my license is that at the time I was taking a year off from school. Not to mention that it was so easy that I did most of my studying in the passenger seat while we were on our way to the test. Of course it also helped that just a year before (2 years ago)I had helped my dad study for his tech+ license by quizing him, so I knew most of the questions anyways. (Yes, if you read all of the last post, he is Extra now)

I suppose that with my background I would have no problem learning the technical information needed to upgrade all the way to extra class. I just need to find time to sit down and practice code for an hour or so every day. I just don't like it when other operators look down on my because of my license class.

>73..Jim N2VNO
Within 1/4 mile of my home is a nightclub with live entertainment and
gigawatt outdoor speakers, that I can plainly hear in my basement.
The band uses all wireless microphones, on about 7 different
frequencies and several infrared devices to put on their show.

Using my scanner (with an attenuator), I have pinpointed each
frequency for each mike and have been purposly disrupting their show.
Why, because during their show, my 2-meter rigs are useless, our
cordless telephone is useless and our TV changes channels, the volume
goes up and down and several other settings keep changing. Like the
energizer bunny goes from pink to deep purple to green, from their
infrared devices!!!

They have altered and upped the power of their equipment, it is no
longer type accepted, the FCC could care less.

One of the frequencies they are using for their cordless microphones
falls in at 146.850 the output frequency of our local repeater. I
just live close enough to them, that I am able to override their mikes
signal by transmitting on the repeater output using about 50 watts and

swinging my beam right down their throat.

They finally quit using that mike at this gig. Mission accomplished!
Now to fry their speakers somehow!

Gary

FWIW: I for one replied to that post with an article taken right out
of the FAQ about the word HAM. It's possible origin and a few diverse
acceptable meanings.

I have no control over what posts eventually make it to the newsgroups
and which one's fail enroute.
There have been times when I have not seen replies to posts appear for
more than 8 days after the original reply was posted.
And, In addition, know of newsreaders that automatically do not accept
posts over a certain length and/or kill them.

There is one newsgroup in-particular that I post to on every single Friday, without fail.
Numerous readers who do get the newsgroup complain that they have never seen a single post in this newsgroup.

So before you start blaming fellow HAMS for not responding to a post, you might inquire as to whether anyone placed a post that the newsreaders did not pickup, first!

Your assuming the "control point" (as you outline in quotes 1, and 2) is
the same as the "control link" (as in quotes 3, and 4). This is not
correct.

73, and happy holidays.

If anyone needs PC contest logging software, you might try
ftp.iol.ie.

The files are sd.zip HF contests (Super-Duper)
sdi.zip IOTA contest (Islands On The Air)
sdv.zip VHF contests

They are in directory /users/okanep

They're also available from http://www.iol.ie/~okanep/

73,
Paul EI5DI

No, I regret to inform you that you now have heard the CORRECT bad news.

------Quote--------

97.107 Alien control operator privileges. -

(a) [snip a related to Canada only]

(b) The privileges available to a control operator holding
an FCC- issued reciprocal permit for alien amateur licensee are:

(1) The terms of the agreement between the alien's
government and the United States;

(2) The operating terms and conditions of the amateur
service license issued by the alien's government;

(3) The applicable provisions of the FCC Rules, but not
to exceed the control operator privileges of an FCC-issued Amateur Extra
Class operator license; and

(4) None, if the holder of the reciprocal permit has
obtained an FCC-issued operator/primary station license.

(c) At any time the FCC may, in its discretion, modify,
suspend, or cancel the amateur service privileges within or over any area
where radio services are regulated by the FCC of any Canadian amateur
service licensee or alien reciprocal permittee.

With an FCC reciprocal permit, you must operate both within the *frequency*
and *power* etc. privileges of your own home license (or licence if from
UK!!) and also within the privileges of the US Extra Class License.

And in regards to the question of callsign:

97.119 Station identification.

(f) When the station is transmitting under the authority of
a reciprocal permit for an alien amateur licensee, an indicator
consisting of the appropriate letter-numeral designating the station
location must be included before the call sign issued to the station by
the licensing country. [Snip Canadian section]

If you need more information, email me.

Not in my area. In my experience, Advanced and Extras are more inclined to get involved in technical tasks. While there are novices, techs, and generals that are very technically oriented, I don't agree with the wave of comments that techs rule the planet and are more technically capable. I'm a VE, and I see loads of folks fold on the advanced tests as compared to general, tech, and novice elements.

Check out the ftp site ftp:cica.indiana.edu (I think), or try http://www.shareware.com. I was browsing that site and found a windows pkt program. I downloaded it and tried it out. It did absolutely nothing. Maybe it is not compatible with the Kantronics KPC-3. I'm sure there are other ftp sites where windows packet programs are available. Try ftp: oak.oakland.edu as well.

There are also windows pkt programs available at most ham dealers.

>>>I'm not sure what figures "they" are quoting - if any - to support this claim.

They say it's just their experience. While not an expert there are many factors that can alter what you see in a lab - equipment, terrain, interferance etc all combine to make every situatin different.

The guys on my cluster are just giving their opinion based on what they have tried - for users to get up the fastest. They were just more stringent about no 9612's. They just couln't get them to work like the others given the same paramters (radio, power, antenna, etc).

I frankly was surprised myself at that too. While Kantronics (except for data engine series) is missing expandability (no tapr header or proprietary slots (except 2400 for the KAM)) and they use their own proprietary systems - they usually make up for it with superior operation (they more or less have to).

Hello Damien

I have a KAM-9612 connected to a Yaesu 2500m with the factory 9600 mods.
It works well and I have not had a problem with it.

I drive it with KaWins on the PC and MacAprs on the Mac.
(I work with both Macs & PC)

Hope this helps

Hi Jeff,

If your Tnc is one of the Kantronics product line, you should try KaWin. It's the only program available that fully exploits the capabilities of both your Tnc and the Windows environment. The full program (complete with nag meter ;-)) is available for download from the KaWin Home Page or FTP site (see below).

Message-ID: <4b2o0r$ncd@news.ios.com>
Source record: 233658

Greg:
I have a TS-690S without the antenna tuner. I am very satisfied with its performance. The TS850 is already an old model. My previous rig was a TS430S, and it worked flawlesly for 10 years. I used to work 6 meters in the 70s and also wanted to get back on 6. The band is now pretty dead, and will likely stay dead until summer returns.I would think that the TS850S is a better rig for HF than the TS690S is. The 850 is a better radio, just without 6 meters. I do not think that you will be able to find many 6 meter transverters around, either; so if you really want to have 6 meter capability get a rig that has it or get a separate one such as an Alinco. I have also heard a local ham with the new Icom OC-706 which has all HF bands, plus 6M and 2 M. It sounded great, so why not look at that one, too. This should confuse you enough.

73s and good luck

Frankly, Gary, I sympathize with the tough situation that you are in.
However, intentional and malicious interference is not the answer.
Just because this nightclub is breaking the law that is no excuse for
you to do the same.

I believe that your intentional QRM is not only unethical, but also
illegal. You might want to consider that before posting on the
internet next time.

It's a great little rig, Joel. Receiver sensitivity is up there with sets costing twice as much. Break-in keying is a bit less impressive than advertised. When I ordered mine, (18 months ago) I was told it would be six weeks; it was four months. All in all, worth the price (and wait!)

I would say exactly the same for VHF and UHF. Believe it or not some of us
are happy there. What I can not understand is why there are some who aren't
happy with us being happy where we are?

I listen to HF and realize that there are good and bad HF'rs, but I don't
stereotype them all as being one way or another.

P.S. some folks have commented that my sig lines are not revelant. If you
were there you understand why it is used, if you werent there it may not
mean as much, and therefore have less importance. The line, not the freedom.

: I called Index Labs, and they sent me the manual. The manual is nothing to
: write home about - and makes most Asian HT manuals look like the Rosetta Stone.

I got one a few days ago from a friend.
It is amazing. The receiver is excellent, and has a very good SCAF filter.
It only opens up to 2.4, and there is no AM mode.
Transmit on SSB is poor. It only puts out 2.5 watts and does not have very
good audio quality, BUT on CW it is wonderful. A full 5 watts and it
sounds great. Excellent reports.
My friend used it on his log periodic in the last contest, and had no
trouble working all over Europe on SSB. (kinda overkill)
Hope this helps.

3915. Icom Repeater Question?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-18 00:00:00 UTC
From: murphy@conch.aa.msen.com
Message-ID: <4b4k7u$dck@recepsen.aa.msen.com>
Source record: 233666

Help,

One of the pins in the external controller jack on the ICOM1220 repeater (and I assume other Icom repeaters) is COR. i.e. when the squelch opens the pin does something to tell an optional external repeater controller.

The Icom repeater has built in CTCSS decoding (which I want to use).

My problem is that when if the Icom CTCSS is enabled the COR pin is still only affected by on the squelch opening or closing, even if the incorrect CTCSS is being received.

I Need the Icom repeater to only change the state of the COR pin if squelch is open AND the correct CTCSS tone is received.

I know I can add an additional CTCSS decoder in line with the audio but has anyone modified their ICOM repeater to do the decoding and have the COR pin indicate if squelch and the correct CTCSS tone is being received?

Thank you very much. - Chris N8UDK

I don't know of any access via the web, but the FCC operates a PAL system
(Public Access Link) which allows you to look up data given the FCC ID.
All you get, basically, is the date the application was submitted, date
approved, and such, plus the name and address of the applicant.

I don't have the phone number handy (standard telephone modem call), but
I'm sure you can get it with a quick call to the local FCC field office,
or, if needed, drop me e-mail and I can look it up.

I am a tech+ and about to take my 13wpm general test. It takes
ALOT of time to work up to 13wpm. Consistancy is a must.
Preparing for written tests is MUCH less time consuming than
preparing for code tests. Code test preparation takes 10X more time.

In this busy world, its difficult or impossible for most to find
the consistant time to study for code.

I happen to be unemployed and have the luxury to waste time
learning code. I don't like or dislike code. But do think
the wpm should be lowered to allow the busy 1990's working masses
a chance to upgrade.

Just to give some perspective -
According to an article I just read, radio astronomers recover signals
a -80db S/N. Of course they integrate for a long time.

In theory there is no limit to the amount of spreading you put on the signal,
it is just refolded back into baseband-bandwidth on receive

>How
>high can the so-called 'processing-gain' be? Will it be possible to
>recover signals that are just under the receiver noise-floor?

The signal from GPS satellites is spread and is received below the noise
floor (how much I don't know)

You neglected to state the chopping frequency. If the
chopping effect is fairly slow, i.e. on the order of a
second or so, I would suggest that you look at the current
carrying capacity of the battery and its connecting wires.
You could be dragging the battery voltage down below the
point where the relays in the radio will hold in. When they
drop out, the load is removed and the voltage recovers. The
relay then energizes and the cycle repeats. Suggest you
monitor the 12VDC at the radio. The 12VDC output jack is a
good place to connect a meter. 73

I live in China most of the time and when I was there I picked up some hams on my radio receiver. I wanted to write them to find out what kind of equipment there are using.

The call signs are KA3CZY, BV2FI, VS6WO, VS6BG, JH5FXP, JA3ZOH, and JA7BXS.

3927. LARC: Gay Ham Club Activities

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-18 00:00:00 UTC
From: an465828@anon.penet.fi
Message-ID: <230417Z18121995@anon.penet.fi>
Source record: 233678

The Lambda Amateur Radio Club (LARC), a U.S.-based international club for G/L/B/T ham radio operators, computer hobbyists and electronics enthusiasts and their friends and supporters, gay AND straight, welcomes new members. For more information about membership and the club's various activities check out LARC's Web homepage:

http://www.netaxs.com/people/skeptic/larc

or send an email to LambdaClub@aol.com

What kinds of things do we do?

Fun things (like monthly newsletters, an email reflector, local meetings, and trips abroad), meaningful public service, and much, much more!!

For example, LARC recently established a disaster relief fund to help two of its members who live on the Caribbean island of Anguilla after they sustained damage during the recent hurricane season. Contributions from LARC members made it possible to acquire and quickly move some essential items for ham shack repair, home repair, and even a few of the little things that bring sustenance and comfort A quick list of what LARC made possible includes drill bits, new wood and masonry blades for saws; a heavy-duty tile cutter; grinder tool supports and a good supply of grinding wheels; tools for repairing and replacing windows; a 12v air compressor; a small drill press; a vise for straightening out bent metal; replacement parts for power tools; fuel line filters for the generators to help them hold up under dirty fuel conditions; some needed health supplies and household items; and items for the health and welfare of a much-loved animal companion.

Join LARC, an open, proud G/L/B/T/ organization which promotes friendship and good fellowship while actively and visibly working for the rights of sexual minorities within and without the amateur radio, computer and electronics hobbies. Membership is open to _all_ regardless of sexual orientation. A ham radio license is not required for membership.

..and this is where Mr. Stark was wrong. One cannot apply a restriction to the individual where indeed the restriction is not embodied in law. When you are in Canada, the Canadain regulations are the applicable authority for the operation of amateur stations - US regulations have no value or standing with respect to the operation of Canadian stations.

A more concrete example may better illustrate. If a US amateur from New York was driving on Highway 401, what speed limit would be applicable? In accordance with Mr. Stark's theory, this individual would be limited to 88 kph (55 mph). However, we know that this is not the case because, as a general statement of the applicability of law, one's behaviour is dictated by the tenets of the appropriate juristiction, not from where the individual originates.

To look at the obverse, I don't think that there would be any question that if a Canadian were pulled over for doing 100 kph on the New York State Thruway, the state trooper would not be impressed with the theory that this was a Canadian vehicle and that it is allowed to go 100 kph in Canada.

>the more restrictive regulation.
>

You would never recieve a notice of operating irregularity, as a Canadian amateur, from an FCC monitoring station. From an operational point of view, the FCC monitoring technician would not issue such a violation to a Canadian ham because, to further illustrate this point, the operation of Canadian amateur stations is regulated by Canadian law and not those issued by the US. Therefore, it would be inappropriate for him to issue such a notice of violation when indeed the Canadian station is not subject to those US regulations. Furthermore, in accordance with the procedures laid down by the ITU, notices of operational infractions to stations outside the juristiction of the monitoring agency are routed to the appropriate regulating agency of the offending station. In this case, Industry Canada would review the notice and send bach a reply that this station is permitted such operation and the notice would be tossed in the garbage, never to be seen by you. Therefore, your hypothetical situation would not require anreply on your part because you would never recieve the notice of violoation. Thus the scenario is moot.

>Also consider this: I hold a Canadian license which allows me A3 on 14.125
>but I am prohibited from using this mode on this frequency in the U.S.
>
>How would you reply to this?
>

Quite simply. The first being is that your licence does not permit you to operate phone on 14.125 MHz. Your licence is a document which simply states that you are allowed to posess, install and operate a station in the amateur service. See section 4 of the Radiocommunication Act. However, in accordance with Schedule II of the General Radio Regulations, Part II, since you are duly authorized to operate an amateur station, in accordance with sections 52 and 53, you may operate with a bandwidth not to exceed 6 kHz (which includes 'phone) on 14.125 MHz while operating in Canada or in the international airspace or waters of ITU Region 2.

If you decide to exercise your privilege to operate in the United States, you are subject to their laws and I believe that this mode of emission is forbidden on this frequency in the United States.

>>Radiocommunication Information Circular 25 (RIC-25) contains the laws and
>>regulations with respect to amateur operation, including those that regulate

Yes. See section 45 of the General Radio Regulations, Part II entitled "Foreign Amateur Operation in Canada." It states by which schedules are appropriate for operation of amateurs who operate in Canada on a temporary basis in Canada.

>Since my radio interests, mainly boatanchors, does
>not usually fit in with these operators I seldom have any contact with
>them. I will not air my personal opinion of the "no-code" class license.
>I do know that all Amateur certificate holders were "grand-fathered"to
>top level licensees without actually having to earn them.
>

Then your information was mistaken. Only those who had the Amateur Radio Operator's Certificate were accorded phone privileges on the 80, 40, 20 and 15 metre bands over and above what they had prior to restructuring. There did not seem to be any justifiable reason for mandating further examination for the operation of radiotelephone on these bands. Moreover, no objections were received in response to this proposed policy during the consultation phase of the restructuring proposal. Otherwise, there was no changes to the operational capabilities of holders of the former certificates.

>Now, here is a question for you. I hold dual nationality - Canada and U.S.A.
>Do I have reciprocal operating rights in Canada?

In order to be accorded reciprocal operating privileges, the individual has to hold "an amteur operator's licence issued by the Government of the United Station, where the holder is a citizen and resident of the United States" (quoted from paragraph 45(1)(a) of the General Radio Regulations, Part II.) Although you may very well indeed be a US citizen, you would not be eligible for a reciprocal operation if you are resident in Canada.

>What about when I was
>a Canadian citizen living in the U.S. as a Permanent Resident Alien and
>had a U.S. license?

I have no idea. Those are US laws and so you will have to query someone in the FCC.

>Would I be allowed to use the U.S. license in Canada
>even though I am eligible to hold a Canadian license?
>

See my comment above. As long as you are not resident in the US, you would not be eligible to operate in Canada in accordance with your US licence.

And also is there posted anywhere the final "rule" -- what
combinations of prefixes are available (i.e. can we have not only the
regular old W and K prefixes but the A and the N...), can a person
living in 3-land apply for a 5-land call, and all the rest of it. NOT
HEARSAY, but the actual rules.

Also, is there a site somewhere with the currently available USED
calls so that we can do a search for calls that we want?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 DECEMBER AND FORECAST FOR 19 DECEMBER - 21 DECEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 17 Dec
Daily Proton Fluence >1 MeV: 2.0E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.3E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 Dec 20 Dec 21 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 Dec: 69/3

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 17 Dec
Learmonth 4 2112 1111
Fredericksburg 3 10
Planetary 5 8

Observed Kp for 17 Dec: 2133 2321
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
19 Dec 8 Quiet to unsettled
20 Dec 5 Quiet
21 Dec 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

18 Dec Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Dec Normal Normal Normal
20 Dec Normal Normal Normal
21 Dec Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
18 Dec -12

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values with sporadic E often
blanketing the F region after 09 UT.
Townsville: Near predicted monthly values with 20% depressions
02-03 UT. Sporadic E was observed 00 and 03 UT. No data after
06 UT.
Sydney: Near predicted monthly values with 20-30% depressions
02, 05-06, 11 and 13 UT. Sporadic E was present throughout the
period and at times obscured the F region.
Hobart: The F region was mostly obscured by sporadic E. F region
frequencies, when observed, were near predicted monthly values
with 20% depressions at 01 and 06 UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
19 Dec 5 Near predicted monthly values. Sporadic E is
likely in the Australian region.
20 Dec 10 Near predicted monthly values
21 Dec 10 Near predicted monthly values

I don't know what kind of modem is in the 9612, but it is very clear that
on "9600 baud ready" radios (which really aren't) the bit error rate is
better when using a real G3RUH modem than it is with an AEA PK-96 (which
uses some modified K9NG modem).
The G3RUH modem results in less intersymbol interference, and combined with
the bad low-frequency response of some radios it apparently has a positive
effect on the results...

>KPC 9612's are not allowed on our Packet Cluster. The ops says even further
>that if they find out you have one they will cut you off.
>
>They recommend true G3RUH's from Paccomm or MFJ.

Why would that be?

We have a whole slew of 9612s and a whole slew of MFJs.
We have had a great deal of trouble with the MFJs.
The 9612s work fine. Plug 'em in, they run.
We just recently replaced some MFJs with 9612s at one
site, just to avoid the continuing problems with the MFJs.

Much cleaner eye patterns with the 9612 demod, whether the
transmitter uses MFJ or 9612 ...

However, we have many links which use the MFJs and have never
shown any problems. These have been short haul links with very
solid signals. 9612s have worked better on our longer / marginal
links ... probably because of the cleaner demod.

Do you have some adverse experience with the 9612s you can share?
Or is it just a matter of brand name bigotry involved?

... Hank

wording and reposted)

3938. Re: Index Labs QRP Radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-18 00:00:00 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanDJsytq.ACD@netcom.com>
Source record: 233689

Joel Malman (malman@poblano.near.net) wrote:

: Has anyone tried the "QRP PLUS" TXcvr from Index Labs? It looks like it
: might be a nice QRP rig, but I would like to hear from other QRP'ers
: re the RCVR quality. On TX, 5 watts seems about right.

: I called Index Labs, and they sent me the manual. The manual is nothing to
: write home about - and makes most Asian HT manuals look like the Rosetta Stone.

: Comments, Please!

It is quite a radio for the price. The only one I had considered other than the QRP+ was the latest QRP offering from Ten-Tec. Nice rig, but I was not impressed with the idea of having to change modules when going from one band to another.

The QRP+ is a full-featured xcvr: complete CW/SSB coverage on all bands 160-10m, including 12, 17 and 30 meters. Some of the rigs that are popular with the QRP enthusiasts offer only limited coverage of the band. Granted, there are preferred QRP calling frequencies on each band, but I did not want the
restriction.

Before buying, you may want to subscribe to the QRP-L mailing list. This is an active list and a bunch of good people. To subscribe, send e-mail to:

listserv@lehigh.edu

and, in the body of the text, type:

subscribe QRP-L YourName

It is not uncommon to get 30-50 messages per day from this list. They also have archives that could be searched for comments on the QRP+

BTW, the QRP+ is also a general coverage receiver, if that interests you. Not too hot on AM, though, because of the 2.4 kHz max on the SCAF filter.

There is no longer any wait for the units. Some time ago, Index Labs offered a group-purchase discount, and it was at this time that there were the long waits for delivery. The latest units also have a new chip so that keyer speed can be varied in one-wpm increments.

Good luck with your purchase...Jim

This can't be a ham newsgroup. It is a back biting, bitching,
belly aching and soap boxing group.

A true ham newsgroup would be ready to assist any new or
potential ham to achieve better and greater things instead of
seeing how low they can be cut down.

>regulations, so I should be excused" ?

They should be tested on 1990's technology more thoroughly, and slack
off on the 1800's technology. Hams should know code, but 5wpm would
be more appropriate to get liscense on HF voice bands. Reserve
the CW bands for higher class licenses at 13wpm and 20wpm.

I think the current written tests are very a joke. Written tests
should encompass more in-depth technical questions and more of them.
The code requirement is useless to those who never intend to operate
in this mode. If there is going to be a filter, at least force people
to learn something useful in the process.

>
>

I'm afraid I have to disagree. I, too, have a busy schedule. However, 5 friends and I (all TECH+, including one who had been liscensed for 37 years) decided that the time to upgrade was at hand (several years ago). We got together each night at 10pm, well after the kids were in bed and asleep and practiced on the air for 15-30 minutes each day for 5 weeks straight. We all starrted off slowly so that all could get up to speed and continued from there.

On february 6, 1993, 6 people took the tests...5 walked out with Advanced, 1 with Extra class licenses.

The moral...we all have extremely busy schedules....and as the commercial sez..there's always room for jello

In order to be eligible to hold a Canadian amateur licence, you have to be the holder of at least the Basic Qualification of an Amateur Radio Operator's Certificate. Since there are no citizenship restrictions to hold this certificate, anyone, regardless of citizenship, may subsequently apply for and hold a Canadian radio licence in the amateur service. The short answer to your question is yes, you may be the holder of a Canadian amateur licence.

Back in 1987, I (a) worked too hard and (b) didn't own a television,
so I had little idea of who the current TV celebs were. One night
I was getting gas in my RZ350 in Westwood (part of Los Angeles), and
there was this very hot red 911SC on the other side of the pump.
The owner of the car came walking up, and my friend (who was
also getting gas in his bike) started exclaiming "That's Garry
Shandling! That's Garry Shandling!". Without really thinking,
I said something like "Settle down! Who's Garry Shandling anyway?"

I really had no clue who Garry Shandling was at the time.

I found out a few years later that Garry is a ham... too bad I
didn't know that then and could have done the geeky "Hi Garry! Wow!
You're a ham and I'm a ham!! Wow!" bit.

Now there's a really intelligent response to a posting. It's crap like this that boosts radio.amateur.misc into the verbal zoo it seems to be turning into. Too bad. There's a lot of very useful information to be found between the postings of the loonies and the ravers. The LARC group has every right in the world to post its message.
If you don't agree with it, no problem -- ignore it. But there's absolutely no need to resort to this kind of base scurility. It's bad enough the social misfits use this group to rave on about whatever it is they rave on about, but people should not be confronted with this sort of garbage when they
check in here.

To Every ham:

Exciting news, I found one company that carry battary at very low price . Kenwoord, Icom, Yaesu, Motorola. The company is MAHA COMMUNICATION. They are also looking for regional dealer. Contact them at 8183334497 in LA,CA. (They don't like a single quantity order, combine your club order for a special price, *Shipping free for club!). They also got TS (Taiwan Serene) Antenna, and ADI Radio!

SB QST ARL ARLB111
ARLB111 New 2300 MHz uses

An October report by the National Telecommunications and Information Administration (NTIA), entitled Land Mobile Spectrum Planning Options, suggests a new use for the band 2300-2310 MHz, now allocated to the Amateur Service on a secondary basis. The report states that the band has potential for new, non-Federal radiolocation, fixed and mobile communication technologies. The report also notes that constraints are necessary for the protection of NASA's Deep Space Network and Planetary Radar operations in an adjacent band. A table in the report describes a possible future use of the band as Wide Area Land Mobile.

The 2300-2310 MHz band is expected to be the subject of an FCC allocation proceeding as a follow-on to ET Docket No. 94-32, which dealt with 2390-2400 and 2402-2417 MHz.

ARLB112 Spread spectrum changes

ZCZC AG79
QST de W1AW
ARRL Bulletin 112 ARLB112
From ARRL Headquarters
Newington CT December 19, 1995
To all radio amateurs

SB QST ARL ARLB112
ARLB112 Spread spectrum changes

The ARRL has asked the Federal Communications Commission to relax its spread-spectrum regulations to give Amateur Radio more opportunity to contribute to spread-spectrum development. The League's petition for rulemaking, filed in December, seeks relaxed restrictions on spreading sequences and greater flexibility in spreading modulation. The spread-spectrum technique, which distributes information among several synchronized frequencies within a band at the transmitter and reassembles the information at the receiver, was first approved for Amateur Radio in 1985 for bands above 225 MHz, and there has been some experimental amateur operation since then.

The petition proposes that the FCC permit brief test spread-spectrum transmissions and allow international spread-spectrum communications between amateurs in the US and those in countries that permit hams to use spread-spectrum techniques. The current rules allow only domestic communication. The petition also asks for automatic power-control provisions to insure use of minimum necessary power to conduct spread-spectrum communication and limit the potential for interference to narrowband modes. The petition does not ask for any changes in frequency restrictions on SS emissions, the 100 watt power limit or logging and identification requirements.

In urging the FCC to adopt the changes, the League's petition calls the proposals the minimum necessary changes in order to foster SS experimentation in the Amateur Service.

Michael Crestohl (mc@shore.net) wrote:

: Say I operated A3 in the 40m "Canadian Phone Band" from a Canadian location
: and was heard my a F.C.C. Monitoring station. I could receive a Notice of
: Violation for an infraction of Part 97 in the U.S. radio regs which prohibits
: me from using A3 in that part of the band. How would I reply to it?

Assuming you signed properly as a reciprocal operator in Canada, you simply say that the FCC has no jurisdiction over radio emissions from Canada and cite Appendix 1 to Part 97. Of course, if you use a Canadian license, you're quite safe. If you forget the reciprocal ID, I suppose you deserve the pink slip, but you'll probably be able to prove you were outside US jurisdiction by testimony, but in that case, Canada could clearly cite you for improper ID.

: Also consider this: I hold a Canadian license which allows me A3 on 14.125
: but I am prohibited from using this mode on this frequency in the U.S.

: How would you reply to this?

In the US, of course, you are subject to FCC jurisdiction and cannot use phone on 14.125, no matter what your operator authorization. See 97.107(a)(3).

: Now, here is a question for you. I hold dual nationality - Canada and U.S.A.
: Do I have reciprocal operating rights in Canada? What about when I was
: a Canadian citizen living in the U.S. as a Permanent Resident Alien and
: had a U.S. license? Would I be allowed to use the U.S. license in Canada
: even though I am eligible to hold a Canadian license?

Canada: GR2 45(1)(a) requires you to be a citizen and resident of the US for reciprocal privileges. Since that seems to be true, your US license is valid in Canada. I see nothing that strips you of privileges if you also have a Canadian license, still less if you are "eligible." (Actually, the Canadian gov't officials I talked to seem to have better things to do than worry about your citizenship and residence, but there it is.)

US: This one is tricky. US citizens are not eligible for a reciprocal permit by 97.5(d)(5). Holders of FCC amateur licenses are also barred from receiving a reciprocal permit (well, actually, it merely provides no privileges) by 97.107(b). *However,* Canadian licensees do not need reciprocal operating permits (see 97.5(b)(6)) and apparently aren't deemed to have them, since their privilege grant is entirely separate in the rules (97.107(a)) and their station authority (97.5(b)(6)) is entirely separate from those who do hold those permits. The only requirement for Canadian license reciprocity is

that the licensee be a citizen of Canada (Id.), perhaps because of the way the treaty is written (see TIAS 2508, Article III). So, in my opinion, the letter of the law *does allow* dual US-Canadian citizens to use a Canadian license in the US. It's not really the spirit, though. (If you have an Extra, why bother?) (P.S. does the FCC care quite so much, either?)

If you are looking for higher data rates then you will need to sit tight and wait for the new PCS rollouts and you will see some 2 Ghz + spread spectrum equipment that will handle the higher data rates. Microwave is currently very expensive for the necessary radios. Even at 900 Mhz you are talking about some very expensive equipment!

PASSIVE SOLAR DESIGN USING COMPUTER GENERATED SUNCHARTS

The sunchart is an interesting and useful solar energy design tool. Basically it is a map of the sun's path across the sky during the year. It can be used as a basic solar energy design tool to aid solar designers in efficiently and easily designing and positionally optimizing solar collectors, solar electrical panels, passive solar homes, greenhouses, and other solar devices.

Optical Physics Technologies has placed an html article, "PASSIVE SOLAR DESIGN USING COMPUTER GENERATED SUNCHARTS," on the internet which provides information in using suncharts in passive solar design. It also provides a source of sunchart generating software and other solar energy design tools. This article can be found at:

http://www.srv.net/~tm_crw4d/sunchrt.html

For those without Netscape access, send me an e-mail message, and I will e-mail basically the same information to you. Unfortunately it won't have the same quality, but it should be useful. You can e-mail me at:

tm_crw4d@srv.net (note - my server is case sensitive)

As a last resort, I can also snail-mail a booklet with the same information, but I will need to recover my costs for postage, handling, and copying. If you want a hard copy snail-mailed, send $6.00 to cover postage, handling, and copying expenses. If you are outside the USA, send $7.00 in US currency. Send this request to:

Dave, I can only speak for the UK. Here there are moves to get a
VLF/LF amateur allocation. Frequencies around 73kHz have been
mentioned as has 160-190kHz. I believe there are allocations at the
latter frequencies in the USA, Australia and NZ. Below 10kHz there has
been activity using "Earth Mode" i.e. sending signals through the
ground by conduction fields. Ham range is limited to about 1-2 miles
at very best with signals attenuated in an inverse cubed law with
distance. The military has been using something similar for submarine
links (Project Sanguine et al.) and nuclear hardened sub-surface
links. Below 10kHz you can hear whistlers, tweeks and other wonders
with quite simple gear. Whistlers are caused by dispersion of
ligntening pulses along magnetic field lines. The best book to read is
by Helliwell written in 1964 called "Whistlers and Related Ionospheric
Phenomena". Read my article in Radio Communications (RSGB) April 1975
for a list of other references on the subject and a bit on "earth
mode". I also did a further article in the early 1980s on a VLF

converter but there are better solutions now.

There are several windows based packet programs out there that are good some much better than others. The best I have seen is the Winpack, it works great and has several advanced features like 7plus compression and automated message retrieval. It is freeware and can be downloaded from Compuserve's Hamnet forum and several ftp sites.

In article <DJpMs9.IFr@sunsrvr6.cci.com> jdc@cci.com (James D. Cronin) writes:
-On page 3 of the new Ramsey catalog, check out the "FM-6 Crystal Controlled
-FM Wireless Mike Kit...$39.95." To quote the catalog:
-
-"For super stable drift free transmission, the FM-6 is the ticket! Most
-low cost FM mikes are tuneable... The FM-6 frequency is set by a crystal
-of 144.00 MHz, easily picked up on any scanner radio."

I called them about this and let them know that it was illegal. At least
the receptionist took notes. It does look like it may be useful for small
foxes. Actually, this transmitter (or one very much like it) has been
advertized by Xandi Electronics in Pop Tronics for a while now. Except
theirs are on 143 MHz! Then again it'll be interesting to put one on
an analyzer...

-For more
-Stupid Ramsey Tricks, check page 26, 'Yagi Antennas'... Covers 140-300 (!)
-or 300-500 (!!) MHz.

As the box describes it, you cut the elements to the right freq at
assembly. It doesn't say that it will do 140-300 all at once...

I don't believe it. I am actually saying some good things about Ramsey?
Nah; can't be...

/\

ADMINISTRATIVE BULLETIN

NEW WWW RADIO PROPAGATION AND IONOSPHERIC
SERVICES AVAILABLE

/\

NEW WWW RADIO PROPAGATION AND IONOSPHERIC SERVICES ARE NOW AVAILABLE

http://solar.uleth.ca/solar

Our main homepage has been supplemented with several new ionospheric services that should be of wide interest to radio communicators (amateur and professional).

Every hour, approximately 15 to 20 minutes past each hour, our system regenerates five real-time globally contoured maps of various important and useful quantities:

1. Global Maximum Usable Frequency Maps.
(http://solar.uleth.ca/solar/www/realtime.html)

2. Global Maps of the F2-Layer Critical (Penetration) Frequency.
(http://solar.uleth.ca/solar/www/fof2.html)

3. Global Maps of the E-Layer Critical (Penetration) Frequency (foE).
(http://solar.uleth.ca/solar/www/foe.html)

4. Global Maps showing the Height Maximum of the F2 Layer (or the altitude above the surface of the Earth where the ionospheric electron density is highest). Information regarding the likelihood of non-great-circle propagation can also be determined.
(http://solar.uleth.ca/solar/www/hmf2.html)

5. Global Maps of Solar Zenith Angles, or the distance of the Sun away from the zenith (the point in the sky that is exactly overhead). Shows the elevation angle of the Sun above or below the horizon for any location on the Earth.
(http://solar.uleth.ca/solar/www/zenith.html)

Each map includes the plotted solar terminator (sunrise/sunset line), the gray-line corridor where the Sun is up to 12-degrees below the horizon, the location where the Sun is directly overhead, and the locations of the auroral ovals based on the latest 24-hour planetary A-index (updated every 3 hours).

To our knowledge, these services form one of the most extensive set of near-real-time maps pertinent to radio propagation and radio navigation on the Internet.

The ARRL has sent out FCC=601-V forms, but the gates have not yet been announced and are not expected to be announced earlier than 1Q96. The forms cannot be mailed to the FCC until the opening dates in the appropriate gates.

I disagree!!! Gary has a license to use 146.850. These people do not.
If Gary wants to he can transmit all day long on 146.85 as long as he
legally identifies every 10 minutes. There isn't a thing the wireless mike
user can do about it because he does not even have a license to use
a measley milliwatt!! The law plainly states that unlicensed stations shall
not be recognized, so Gary's transmissions could not be malicious,
since the unlicensed station is not recognized to begin with. Once again,
AS LONG AS HE IDENTIFIES!!

I had a similar situation back in 1985. Bruce Springsteen was setting
up at Veteran's stadium in Philadelphia. I used to monitor 446.00 Mhz
all night long, while working in my shack. I had a 6 dbd antenna at 75
feet, which allowed me to work HTs in a 15 mile radius. Springsteen's
stage crew was using amateur HTs on 446.00!! At first I did not know
what was going on, but I figured it out. I broke in and said my call sign.
After about 15 seconds of silence, somebody said, "What the hell is
WX2z@@#$!!!". I came back again and said, "This is WA3RVT, what
is your call sign?" They said, "Fuck you asshole, I don't need a call
sign, so get off our channel." I explained to them that they were using
an amateur radio frequency illegally and that they needed a license
to operate their transmitters. This was met with more profanity. I had
already discovered that even though I was 5 air miles away that my
100 watt transmitter got over their handie talkies, so for the next hour
I legally called all of my friends, one right after the other. The result?
They stopped using the radios!!

I thought someone would have answered the question "what is ham"
Guess I should have spoken up sooner.

This is a condensed version of an article in a local Hamclub
Newsletter:

THE ORIGIN OF "HAM"

The word ham was first applied in 1908 and was the call letters of the
first amateur radio club. Albert Hyman, Bob Almy and Peggy Murray
first called thier staion HYMAN-ALMY-MURRAY but in code it was tedious
so it was shortened to HYALMU. Confusion resulted between signals
from HYALMU and a Mexican ship, MYALMO. They decided to use the first
letters of each name and identify as HAM. That's where the term
originated or so the story goes.

I don't know the authenticity of this and the article does go into
more detail. Anyways it was interesting reading. If there is enough
interest I will post the entire article.

>Gary
I sympathize. I know what it is like to have neighbors who aren't always considerate neighbors.

However, at this point you haven't been any more considerate than what they have. Knocking them off the repeater output frequency is one thing, destroying their equipment is another. Remember, these musicians aren't playing this club because they have multi-million dollar record contracts. They're working slugs like you and me.

At this point you have the option of introducing yourself as somebody with some knowledge of the interference they are having with their wireless equipment. Its quite probable they don't know they're interfering with you, but you obviously know you're interfering with them. It may take 8 or 10 site surveys to properly diagnose the problem, without cover charge of course. You could also suggest that the output level of their outdoor speakers be reduced to prevent damage in case of RF interference.

I know, its the bees and honey thing but darned if it doesn't work once in a while.

Strange how you equate school with welfare.

I'm an Advanced class operator. When I've finished school (Clark College) I plan to upgrade to Amateur Extra. Here's the deal though, I had time to become an amateur radio operator because I wasn't going to school full time and working part-time. Maybe that was the case with the person you left your thoughtful message to.

You can't force someone to become a ham radio operator, and you can't force a ham radio operator to upgrade. I have plenty of friends who are Tech-Plus operators and have been for years. I don't believe that most will ever upgrade. One of the men who gave me my Novice test in 1990 is a General class operator and has been for more than 20 years.

Okey, I'll get off my soap box now.

The following is a form I originally devised for New York City
Amateur Radio Emergency Service, but could easily be adapted for
other HF or VHF nets. Enjoy.

I seem to recall reading something some time ago about some experimenters playing with QRP DX'ing in the 49 mHz Part 15 allocation. I think there was even a newsletter being published on the subject.

Does this ring a bell with anyone?

ARLD063 DX news

The ARRL Membership Services Committee (MSC, a standing committee of the Board of Directors), having reviewed documentation from the DX Advisory Committee (DXAC) and the Awards Committee, has voted 5 to 2 to recommend the addition of Scarborough Reef to the ARRL DXCC Countries List.

The DXAC and the Awards Committee had come to opposite conclusions regarding the eligibility of Scarborough Reef for separate DXCC status. Under new procedures adopted by the ARRL Board in July, 1995, when these committees do not agree the question is referred to the MSC for review and recommendation to the full Board.

The recommendation that Scarborough Reef be added to the DXCC List will be considered by the ARRL Board of Directors at its January meeting.

ARLX074 Ham radio on parade

The Edison Amateur Radio Network in Southern California will bring ham radio to the Tournament of Roses Parade in Pasadena January 1. The group plans to operate on 20 meters from the Southern California Edison parade float using the club's call sign, WA6USD.

In exchange for the opportunity to operate from the float, and to possibly get some national publicity for Amateur Radio in the process, club members agreed to help build the float. In addition to parade day, WA6USD will be on the air daily after December 26 as the float is under construction. Jim Walls, WB6WMW, will be at the controls January 1.

3993. Re: Anyone work w/ RADAR ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-19 00:00:00 UTC
From: Dave Phillips <dphillips@ips.iac.honeywell.com>
Message-ID: <4b7j3f$dhr@cst715.iac.honeywell.com>
Source record: 233728

Hugh

It's been a few years, but I worked for several years as a Airborne Intercept Radar Systems specialist (Also known as "Fire Control") on the McDonnel F-4 C/D/E series of aircraft. This radar package was supplied by Westinghouse as the AN/APQ100 (F-4C), AN/APQ109 (F-4D) and the AN/APQ120 (F-4E).

The functional characteristics of this system included two transmitters. One was a variable pulse rate search/track system, the other was a CW illumination transmitter (1KW) used to provide illumination and tracking range/rate (via doppler) for the AIM-7 E/F Sparrow Missle.

The main system components are housed in a package that conforms to the aircraft nose section forward of the cockpit, and slides out on a rail for servicing once the radome has been opened and swung aside on its hinge. The only components housed in the cockpit area are the control boxes, display generator and the scopes. A conventional weapons delivery computer and a gyro stabilized lead computing gunsight components were stored in a bay behind the cockpit (F-4D/E only). Although the computers used were Analog not Digital, this radar system provided very accurate airborne search and ground mapping capabilities, and in the late 1960's was the state of the art in airborne systems.

The primary function of the pulse radar was search and track. This was performed by generating a variable frequency and rate pulsed transmission (variable is much harder to jam) which was radiated by a rotating feed horn on the antenna. The antenna has a sweep of 120 degrees azimuth and 85 degrees in elevation. The feed horn rotatation is eliptical ("nutated") in order to provide a wider dispersion of the radiated signal when illuminating small fighter size targets at max range when aquiring and locking on to a target. Effective search range of this radar is approximately 100 miles, and accurate airborne track is approximately 30 miles. The system also aquired information from other aircraft systems (primarily the Air Data Computer and Inertial Nav systems) to determine the alititude, speed, course and attitude of the host aircraft. This information was in turn used to calculate the optimum range and steering information for weapons such as the Sparrow, as well as a number of semi-smart conventional air/mud weapons. When I worked on the systems at the USAF Weapons Center at Nellis, the radar system was integrated to provide aiming and target tracking information for the Wallye glide bomb and the AGM-45 Shrike anti-radar strike weapons. Later, it was also integrated with the first laser designator system. In both cases, the radar displays were used a television displays showing true target image.

Basicaly, a pulse from the transmitter travels through free space at approximately 1 mile every 6.3 microseconds. This is close to the speed of light, and is the same basic velocity used for all radio wave propogation calculations. A pulse that travels a distance of one mile, strikes a target and is reflected back, is recieved back at the transmitting site 12.6 microseconds after it was transmitted. This time increment is known as the standard "radar mile" and governs the design of all radar tracking systems. For example, most wide area sweep radars which are designed to provide 100 mile coverage have a rotation period of their antenna set to 12.6 seconds.

In a fighter aircraft like the F-4, the primary reason for having the radar on board is search/track/attack of airborne and ground targets. Navigation and weather observation are a secondary use.

The radar reciever utilized a range gate tracking technique to determine provide range information. When a target was illuminated, the weapons control pilot in the rear cockpit could move a range gate aquisition strobe over the target and "lock on". This set the tracking range gate which would provide steering and range information for the target. A synchronizer computer (Analog) would then command the radar antenna to track the target. Once locked on, the CW illuminating radar was turned on to provide a continuous beam which would be "ridden" by the sparrow missile. The missle used two antennas, one forward and one aft, which prior to launch were fed with the target reflected doppler shifted signal (forward) and the transmitted signal (aft). The missile contained a klystron tuned oscillator which tuned automaticaly to keep these two signals in reference. The difference of these two reference signals represented range to target. When launched, the missile followed the beam by keeping the fwd/aft antenna aligned by measuring signal strength in flight and adjusting to keep the beam centered. As the missile closed on the target, the aft antenna would sense a increase in the reflected signal frequency due to doppler shift, and the aft antenna would sense a decrease. When the difference between these two frequencies reversed, the missile was "at target" and the wardhead (28 feet of folded beryllium rod wrapped around 64 pounds of high explosive) was detonated. Nasty little beast. Should the illumination signal be lost while the missile was in flight, the on-board klystron would continue to slew at the last known rate and act as if the signal was still being recieved. Known as a "home on jam" feature, this allowed the missile to remain committed. Since it flew at Mach 3.5 plus, it was very difficult to jam and dodge this missile. Unfortunately, it was designed to intercept bombers at ranges in excess of 15 miles and was not very useful in a fighter versus fighter engagement where ranges tend to be less than 2 miles. Since the missile can not maneuver while its rocket motor is burning (3.5 seconds), this close range would often result in the missile going "balistic".

This radar system is a simple one target at a time tracking/attack system. More modern system today use pulse doppler and digitaly scanned antennas and can track multiple targets, but the basic priciples are still the same.

This little brain dump should get you started. I had forgotten how much I knew about this beast until I started typing. Hopefully, I haven't bored you to tears.

Happy Hollidays

Dave Phillips

>Sigh. Everyone else jumping off the Empire State Building still wouldn't
>compel me to do so.

I, for one, am glad that magazines send renewal notices early and often.
I subscribe to Linn's stamp-collecting newsletter and it is really pot
luck as to whether I will respond to the first or last renewal notice.
If they only sent one, 30 days before the renewal date, chances are real
good I would forget to renew and not notice until I missed a few
issues.

I am just guessing, but I would bet that the biggest reason ARRL starts 4
months early is that giving people as much time as possible to renew
decreases the number of people who lapse for a month or two between
renewals.

Code is a personal issue -- sometimes it takes people no time at all
to get to 20WPM, others it takes forever.

>In this busy world, its difficult or impossible for most to find
>the consistant time to study for code.

So because people are "busy" they should be excused from the
requirements? What next? "Sorry, I don't have time to read the
regulations, so I should be excused" ?

If you can find time to pick up the microphone and yak on 2 meters,
or bitch and whine in r.r.a.m/p, you have the time to make one or two
CW contacts during the day.

22 Dec Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
19 Dec -11

Observed Australian Regional MUFs:
Darwin: Mostly near predicted monthly values. Sporadic E was
observed 07-11 and 18-21 UT and occasionally obscured the F
region.
Townsville: Near predicted monthly values with 15-20%
depressions 00-04, 10-13 and 18 UT. Strong sporadic E was
observed 05-09 UT.
Sydney: Near predicted monthly values. Sporadic E was present
00-02, 04-05, 07-14 and 19-23 UT and occasionally obscured
the F region.
Hobart: Near predicted monthly values with 20% depressions
14-17 UT. Sporadic E was present for most of the period and
often obscured the F region.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
20 Dec 0 Near predicted monthly values to 15% depressed.
Sporadic E is likely in the Australian region.
21 Dec 5 Near predicted monthly values
22 Dec 5 Near predicted monthly values

Sounds like a problem I encountered with a street light about a decade ago. Noise occurs while the light was warming up to full brightness. As soon as it went full bright it cycled off, cooled off and started over. Called the local street light people, they did their thing and the problem didn't go away...called again, got the mumbo-jumbo that they couldn't do anything. I mentioned it was interfering with Ham radio operation and they were out within the hour and stayed on it till it was fixed. Make sure you tell them it is causing RFI.

Packet radio is the proverbial pasture that most IC2-ATs are living out their
retirement in. It's probably the most popular radio there is for packet. Have
fun.

Message-ID: <4ba7bq$9j8$2@mhadg.production.compuserve.com>
Source record: 233552

Actually Hans,

A control op MUST be able to CONTROL the rptr and patch....

Even above 222.15, the "control" op cannot be the user!!! Unless
the user has the codes to CONTROL the rptr...

BUT even then, they still cant answer it ON THE air...it must be
answered OFF the air per FCC Rules, comments, etc over the
years...too many out there do NOT want to read the rules and even
if they do, they tend to ignore it....

ALSO AVAILABLE ON TVRO SATELLITE on Spacenet 3, Transponder 9, 6.8 Audio.
##########
Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show
can really work.

Also, be sure to check out our WWW Home Page. It has information on
upcoming shows,reviews of past shows, and even theme music. It is
updated courtesy of the Boston Amateur Radio Club. Access it at:

http://www.barc.org/barc/ham-more.html

You may be able to make a serial-to-parallel converter. But, I guess you
might have good solution after you go through your printer manual. It
probably has a serial interface option or already have one.

>>them....

I like and use several of the MCC RC-100's. No phone patch, but will support one remote out of the box. They can be used with multiple remotes as long as the audio mixing is done outside of the controller. It has loads of aux cntrl outputs and can be configured for BCD. I use a $8 Hallmark greeting card 10 second voice storage module wired to the RC-100's external ID port for outstanding voice ID quality on a budget.

I have several controllers of other brands incl. homebrew stuff, and feel I get the max bang/buck with the MCC stuff. I also have some of their RC-1000's and a VS-100 for ATV.

Just my $.02

[ANARTS - Australian National Amateur Radio Teletype Society]

[Don't blame ME for the shouting; and I swear, if they double-space
their stuff again, it goes out as is... Dave]

A.N.A.R.T.S. News Bulletin 889 17th December 1995

ANARTS BROADCAST DATES

ANARTS WILL HAVE ITS LAST 1995 BROADCAST ON 17TH DECEMBER, AND
WILL RESUME ON 21ST JANUARY 1996, GIVING ALL CONCERNED A WELL-
EARNED BREAK. PSE NOTE CASTS RESUME ON 21ST JAN AND 7TH AS
STATED IN LAST WEEKS BROADCAST.

WE HAVE HAVE A GUEST EDITOR TODAY - COL VK2CTD.

FROM COL VK2CTD TO ALL IN RTTY - LAND ESPECIALLY THOSE WHO HAVE
TAKEN OUR BROADCAST THROUGHOUT 1995.

ANOTHER YEAR IS COMING TO AN END AND I TAKE THIS OPPORTUNITY IN
WISHING EVERYONE A VERY MERRY CHRISTMAS AND A HAPPY NEW YEAR.
OR TO PUT IT THE WAY SOMEONE AT WORK SAID TO ME ON MY FIRST
CHRISTMAS IN AUSTRALIA 30 YEARS AGO, HAVE A BEAUT CHRISSIE AND
A BONZA NEW YEAR. I TAKE THIS OPPORTUNITY TO THANK ALL THOSE
WHO HAVE HELPED IN BRINGING THE BROADCAST TO YOU EACH WEEK, JIM
VK2BQS NOW RETIRED AND LIVING A FEW KILOMETRES NTH OF NEWCASTLE
NSW, A SPECIAL THANKS JIM FOR THE GREAT EFFORT YOU MADE OVER
THE YEARS SENDING THE CAST ON 20 AND 80 METRES. ALAN VK2DPM OUR
TREASURER FOR 20 AND 2 METRES. JOHN VK2BAT 40 AND 80 METRES.
CLEM VK6CW FOR RELAYING THE CAST OVER IN WA AND FOR SENDING THE
DXNOTES TO PAT EACH WEEK.

WELL DONE, I THANK YOU ALL ON BEHALF OF ALL WHO TAKE THE CAST.

UNFORTUNATELY THERE IS NO IPS REPORT THIS WEEK BUT I THOUGHT
A FEW NEWS ITEMS MAY DO JUST AS WELL FOR A CHANGE.

SARTG WW RTTY CONTEST HELD EARLIER THIS YEAR.
I HAVE THE LIST OF RESULTS OF THIS CONTEST IN MY HOT LITTLE
HANDS. ITS QUITE A LONG LIST SO I THOUGHT I WOULD JUST GIVE
THE FIRST, SECOND AND THIRD SINGLE OPERATOR CLASS FOLLOWED BY
BY A SPECIAL MENTION.

FIRST K1IU, 837660 POINTS, 496 QSO'S.
SECOND SM5FUG, 756280 POINTS, 453 QSO'S.
THIRD OK1DX, 719670 POINTS, 411 QSO'S.

SPECIAL MENTION FOR VK6GOM NORMAN GOMM WHO CAME 8TH WORLDWIDE IN THE MULTI OPERATOR CLASS 121765 POINTS, 120 QSO'S.

NORMANS CO-OPERATOR WAS PETER VK6APW.

CONGRATULATIONS FROM ANARTS TO BOTH, I REMIND EVERYONE THAT THIS TEAM CAME FIRST IN THE MULTI OPERATOR CLASS OF THE ANARTS WW RTTY CONTEST EARLIER THIS YEAR WINNING ONE OF THE THREE PLAQUES AWARDED BY ANARTS. HOW ABOUT VK1 2 3 4 5 7 AND 8 GIVE IT A TRY NEXT YEAR.

BY THE WAY BO OHLSSON SM4CMG, CONTEST MANAGER OF THE SARTG ADVISES THAT THE SARTG ARE NOT RUNNING AN AMTOR CONTEST NEXT YEAR. IT IS NOT CLEAR IF THIS IS A PERMANENT DECISION.

THE BROADCAST IS BEING RELAYED IN W.A. AT 75 BAUDS IN LIEU OF THE 45 BAUDS BEING USED IN THE EASTERN STATES. I BELIEVE THAT A LOT OF THE STATIONS THERE RECEIVE THE CAST ON 2 METRES WHICH IS IDEAL FOR A HIGHER BAUD RATE. CLEM VK6CW HAS SENT THE DETAILS TO JIM VK2BQS AND WE HOPE TO INCLUDE THEM IN A CAST AFTER CHRISTMAS. I WONDER IF THE HF STATIONS ARE HAVING MUCH SUCCESS AT THE HIGHER SPEED?. IT SEEMS SENSIBLE TO ME IN THIS INFORMATION AGE TO GO FOR A HIGHER RATE, PERHAPS WE OVER THIS SIDE OF AUSTRALIA MAY HAVE TO WAIT TILL CONDITIONS IMPROVE.

WHILE ON THE SUBJECT OF CONDITIONS, I THINK WE MUST SURELY BE CLOSE TO THE BOTTOM OF THE SUN SPOT CYCLE. HAVE HEARD THAT IT SHOULD OCCUR ABOUT HALFWAY THROUGH NEXT YEAR, DESPITE REPORTS THAT WE ARE ALREADY IN THE NEW CYCLE. IT IS ALSO REPORTED THAT ONCE THE CYCLE COMMENCES THAT CONDITIONS WILL IMPROVE QUITE QUICKLY. WELL IF THEY DO YOU CAN SAY YOU HEARD IT HERE BUT IF NOT THEN I DENY ALL KNOWLEDGE OF ANY SUCH COMMENT. HOWEVER I WOULD LIKE TO THANK THE STALWART STATIONS THAT SEEM TO MAKE IT MOST WEEKS. NOT TO SAY THAT THE OTHER DONT TRY, FOR INSTANCE MOST WEEKS I CANNOT HEAR JOHN VK2BAT RELAYING THE 40 METRE CAST FROM JUST NORTH OF NEWCASTLE NSW, I SOMETIMES HEAR VICTOR VK3BVJ AND OCASSIONALY A CANBERRA STATION. BUT ALL THE VK3'S VK4'S AND THE OTHER VK2'S ARE NOT HEARD AT THE MOMENT. WILL KEEP MY FINGERS CROSSED THAT IN A FEW MONTHS TIME WE WILL HAVE FORGOTTEN ALL ABOUT SUCH PROBLEMS.

HOME LICENCES FOR CHINA AMATEURS

INDIVIDUALS CAN NOW OBTAIN AMATEUR LICENCES FOR HOME STATION OPERATION IN CHINA WHERE PREVIOUSLY ONLY CLUB STATION OPERATION WAS PERMITTED. EXAMINATIONS HAVE ALREADY BEEN HELD AND THE FIRST HOME LICENCES ISSUED.

THERE ARE FOUR LICENCE GRADES, DISTINGUISHED BY THE CALLSIGN PREFIX. THE TOP GRADE HAS THE BA PREFIX AND LICENCEES CAN USE FIVE HUNDRED WATTS ON ALL BANDS PERMITTED BY THE CHINESE AUTHORITIES. THE NEXT GRADE CAN USE 100 WATTS ON ALL BANDS AND HAS THE BD PREFIX. NO LICENCES HAVE BEEN ISSUED AS YET. THE THIRD GRADE IS ALLOWED 10 WATTS AND OPERATION IS PERMITTED ON SOME BANDS ONLY. THE FOURTH GRADE REQUIRES NO EXAMINATION BUT CAN ONLY OPERATE ON THE ONE FREQUENCY AND MODE - 29.5 MHZ FM WITH HOME-MADE EQUIPMENT. THEY USE THE BH PREFIX AND THE LICENCE IS FOR TWELVE MONTHS ONLY AFTER WHICH OPERATORS MUST UPGRADE. WELL KNOWN CHINESE AMATEUR CHENG PING NOW SPORTS THE CALLSIGN BA1HAN.THE BY PREFIX IS STILL USED BY CHINESE RADIO SPORTS CLUBS WHILE THE BZ PREFIX IS USED BY INDIVIDUALS AND OPERATION IS ONLY PERMITTED FROM CLUB STATIONS. THE BT PREFIX IS RESERVED FOR OFFICIAL EVENTS STATIONS. FOR THIS INFORMATION WE ARE INDEBTED TO WALLY WATKINS VK4DO.

NOTES OF INTEREST:

S.M.O.M. 1A0. From December 8 until December 17th 1A0KM will be on the air. Operations will be in SBB CW and RTTY from 160-10 meters inclunding warc. From December 12 Andre ON1AIG will also start activity on both AO13 and AO10 around 890. QSL to IK0FVC.

MACQUAIRE VK0. Bob NM7M, reports that Warren Hull, VK0WH, last 18 November arrived in Macquarie Island to stay a whole year. The frequencies are fixed due to a commercial equipment without VFO and are the following : SSB 14130 and 3570 KHz CW 7010 KHz >From 10 Decembr sked with VK4ATS are planned on 14130KHz around 10.00 UTC looking for other stations contacts. Warren reports that during the stay on the island he cant send QSL, than it is necessary to wait for some months. Bob will help Warren to make some RTTY QSO as this country is highly requested.

CROZET FT5W. Jean-Jacques F5SZK and Samuel F5IJT will be active from Dec 95 until February 97 from Crozet Island, respectively as FT5WF and FT5WE. The operators, who will leave France 7 Dec will arrive to Possession Island the 14 Dec to start the activity as soon as possible, with the two separate stations.

Operation will be in CW SSB, probably in RTTY/PACKET/SSTV. They will use a TS690 for 50 MHz and a beacon will be activated on 6 meters using the FT5WE call. The HF frequencies as following:
CW 3505 7005 10105 10115 14005 18075 21005 24895 28005KHz
SSB 3792 7045 14145 14245 18145 21245 24945 28445KHz
QSL for FT5WE (Samuel) via F5GTW Claude Touyeras, 23 rue des Chardonnais, Cite de la Diete, F-86130 Jaunay Clan, France.
QSL for FT5WF (Jean-Jacques) via F5IZK Andre Loiseau, Ecole de Garrabet, F-09400 Garrabet, France.

WAKE KH9. From 24 to 31 January 96 AL7EL WB2DND KC7V and K4HQI will activate this Island with major emphasis on RTTY and Satellite operation. To minimize pirate activity the callsign will be annonced shortly before operations begin. An Internet home page will be set up. and e-mail to Wake will be available. Pilot stations in Europe, Africa and the East Coast USA will be used to maximize contacts with those hard to reach locations. QSL to AL7EL.

The VK2SG RTTY DXNOTES are also available on Internet at reflectors dx(at)ve7tcp.ampr.org, an digital-dx(at)st.rim.or.jp

The Ohio/Penn Dx PacketCluster DX Bulletin No. 233

December 11, 1995. Editor Tedd Mirgliotta KB8NW.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2DND, WB3JFS, K4UTE K6OZL, DF4RD, CT1ENQ, F6AJA, JJ2QXI, NPDXG Bulletin G4BUE & DX NEWS SHEET, DL9GOA & DXNL and VK5IE the following DX information.

ANTARCTICA STATIONS.....
Palmer Station KC4AAC Mark makes phone patches and operates every every Thurs night anytime after 0000z. He is more than willing to hand out QSOs between phone patches and after he has completed them all.

MAWSON BASE. It has been reported that Graeme Currie VK0GC will be stationed there for the season. No QSN's have been reported on the Ohio/Penn Cluster Network as of yet.

EM1KA is active from the Ukrainian research base Vernadsky around 14195 or 14265 kHz after 0300z. This station has also been heard on 1832 kHz around 0350z.

5N NIGERIA. 5N0OBA 5N0PYL 5N0T 5N3ALE 5N9WKO will use 5N4OTB call sign from Bonny Island (which may count for a new IOTA) from Dec 23-28th. They will be active on all bands SSB and CW. QSL via F2YT.

KH2 GUAM. Ray WH6ASW who works as a teacher on Guam and will be there for the next two years. Begin looking for him on the bands as WH6ASW/KH2 very soon. QSL via G3EZZ.

KH9 WAKE ISLAND. The Dateline DX Association is pleased to announce its plans to activate Wake Island January 24-31st (1996). This will be a one week operation by four experienced operators with the intention of taking KH9 off the DX Bulletin's most needed 100 list and satisfying the large European demand. The callsign to be used will be announced shortly before commencing operations to minimize pirate activity.Operators announced are AL7EL WB2DND KC7V and K4HQI Activity will be on all bands including the WARC bands. There will be a major emphasis on RTTY and satellite as these modes have never been activated from Wake. QSL via AL7EL, Tom Harrell, 27257 Nellis Road, Evans Mills, NY 13637

OX GREENLAND. The DXNS report that OX3XR tries to be active every Wednesday on 1825 kHz between 2200 and 2300z. Also, check 3503 kHz around 1030z. QSL via OZ3PZ.

OX GREENLAND. The DXNS report that OX3XR tries to be active every Wednesday on 1825 kHz between 2200 and 2300z. Also, check 3503 kHz around 1030z. QSL via OZ3PZ.

SPECIAL PREFIX. Austrian stations during 1996 will be allowed to use the special prefix OEM, on a voluntary basis to celebrate their 1000th anniversary.

SEND YOUR QSLS TO....The PVRC was active as K3VOA from the Voice of America HQ during the ARRL 10 Meter Contest. QSL via K3IXD.... Pete AH3C, who was active from Cyprus as C4A in the CQ CW Contest, reports his new mail address as follows Pete Grillo, AH3C, 2150 E. 6200 South, Salt Lake City, UT 84121... Steve, KU9C, is now the new QSL Manager for for Leonce, FM5DN.......

VP5 TURKS & CAICOS. Koji JJ2QEH and Mack JJ2QXI will be active FROM February 3-9th at VP5JM's rental shack. QSL JJ2QEH to Koji Iida, 1866-2, Oota, Minokamo, Gifu 505 Japan. QSL JJ2QXI, Masahiro Mori, 1268, Atobe, Mugegawa, Mugi, Gifu 501-26 Japan.

VP8 SOUTH GEORGIA ISLAND. The NPDXG reports that VP8CGE and VP8CID will return soon to this island.

XQ0 EASTER ISLAND. The DX News Letter reports JA7AYE and JA7XQV who were recently active from Paraguay, will make a stopover on Easter Island on their way home back to Japan. They will be active mainly CW as XQ0/JA7AYE between December 30th and January 3rd 1996. QSL via JA7AYE.

YA, AFGHANISTAN (UPDATE). Dick, K4UTE, talked with Yan F5TCN who is the QSL Manager for YA9XL, and Yan states that at this time he has no logs but will let Dick know when he receives them. The operator of YA9XL is Oleg UT9XL and is in Kabul. Oleg appears to like 7005 kHz around 0100z and has been heard on 20 meters CW between 1400 and 1500z. Yan gives the following address to QSL which in not the one in 1996 callbook Yannick Chilliau, 14 Route d'Harnes, F-62880 Annan sous lens, France.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit.

PLEASE SEND ALL YOUR NEWS TO THE BROADCAST OFFICER PAT VK2JPA AT VK2DAA OR VIA MAIL TO PO BOX 60 BLACKTOWN NSW 2148.

IF YOU SEE SOMETHING INTERESTING ON PACKET OR OTHER SOURCES SEND IT ALONG, OTHER AMATEURS WILL BE INTERESTED TO SEE IT TOO.

PLEASE SEND ALL YOUR GENERAL ENQUIRIES SUCH AS MEMBERSHIP OR OTHER QUERIES TO EITHER PAT VK2JPA OR COL VK2CTD BOTH AT VK2DAA, AGAIN

YOU CAN SEND IT BY MAIL TO PO BOX 60 BLACKTOWN.

THIS ENDS THE CAST FOR THIS WEEK, AGAIN I WISH EVERYONE A VERY
MERRY CHRISTMAS AND A HAPPY NEW YEAR. HOPE TO SEE YOU NEXT YEAR
73S FOR NOW DE COL VK2CTD BROADCAST OFFICER FOR ONE WEEK.

4025. Looking for US Counties QSLs

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-20 00:00:00 UTC
From: kwp@rai.ping.at
Message-ID: <5-FAyX$V-jB@rai.ping.at>
Source record: 233611

Hi there,
Our three previous pleas for help yielded a total of six reactions and, so far, three QSLs to add to our collection. That's not too bad, considering tat a campaign by, say, packet radio in Liechtenstein HB0, would yield not more than half as much, :-)) So here we go with the fourth and final part of US counties missing in the files of QSL COLLECTION. Those of you who do not only use this newsgroup for vulgar communication and discussion of trash but happen to be hams might risk a look into their personal collection - if you have a QSL from one of the following counties to spare, please send it to: QSL COLLECTION, POB 2, A-1112 Vienna, Austria. And if you'd like to know more about the biggest QSL COLLECTION worldwide, drop me a line.
Seasons greetings
Wolf OE1WHC
Hon. Curator, QSL COLLECTION

hi all
anybody done work with a tait t520 that uses a multi channel
swithching unit it comprises of 2 x bcd's feeding the board where the
diode matrix board was
the 2 chips {14/16 devices forgot which} are missing hence i cant
dissasemble the chips for the programme
A:have you got any info on the chips
b:have you got any info on the programme that goes into these chips

i believe that they are ttl proms ie as used in the mx290 series etc
any help much app

Mike: For a comprehensive logger try "LOGIC", advertised in QST.
They have a demo version. In recent issue of QST there was a
product review of logging programs you might find interesting.

For packet, it depends on your TNC; I have an AEA PK232 TNC and
use AEA's PcPakratt program (2.0) for Windows. It's great! It
has a simple VHF logger included.

I would have to agree with this..... In August of 1994 I passed the no-code tech testing. In January 1995 I started studying the code, (20-60 mins every day) and in July passed 20wpm. One or two 20 minute sessions a day should not be too difficult for anyone.....

I had that problem a year or so ago. It was a street light a few hundred
yards away with a bad bulb. The noise would cycle on and off every
few minutes as the bulb lit and went out. A call to the street light
bulb changing S.W.A.T. team, and the problem was gone.

I have one of the original Kantronics Packet communicaotrs and can't seem to figure it out. I want to just monitor packet activity first before I wire up my radio. I have already hooked up the audio out to the audio in of the packet communicator and have the link from computer to packet working. I am not able to get the thing to go into minitor mode to see if it can pick up pacets going by. I hear them onthe audio and I can see the RECV light go on.... Tried COMM mode and tried TRANSP mode...

Any ideas, Mike WB2TBQ

4041. Contesting, ad nauseum

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-20 00:00:00 UTC
From: tigger@prairienet.org
Message-ID: <4b82vd$oqb@vixen.cso.uiuc.edu>
Source record: 233627

Seeing as this newsgroup has deteriorated to nothing more than
mudslinging, I'm somewhat reluctant to post this. Nevertheless...

As a contester, I find it saddening that some people on this newsgroup
think that it's a cakewalk. All that tells me is that you haven't tried
it. Maybe you're not interested in contesting... Fine, whatever fills
your Twinkie. But it's still in INCREDIBLY bad taste to condemn something
and the people who enjoy that activity simply because YOU don't like it.
Are you so certain of your opinions that you never question them?

I've said this before on this group, and I'll say it again: Contesting is
FUN, folks, and it's quite difficult to pull off a major event. If you
think it's so easy, give it an honest try and see if you still feel the
same way. Contesting requires lots of skill, mental prowess, strong
knowledge of propagation, and a hell of a good ear. There is a lot more
to it than simply screaming into a microphone.

If you're an operator that has thought about trying contesting, feel free to
drop me a line. I'd be happy to entertain your questions/comments, etc.
If you're just gonna flame me, don't waste your time or mine.

73 and happy holidays to all,

Sean

>I had time to become an amateur radio operator because I wasn't going
>to school full time and working part-time. Maybe that was the case
>with the person you left your thoughtful message to.

Pretty close. When I took my tech exam I was taking a year off from
school and working full time. Now I am back in school (on break right now)
and just can't find a time of the day that I feel like studying to waste on
practicing code. Not that code is a waste of time, but I have much more
important things to study. My day starts around 10:00 am and does not end
till 3 - 4 am. I am sure that you understand this being a student yourself.
Sure, if I was working instead of going to school I could make a portion of
each evening free to study code, but with my workload in and out of classes
it just does not happen.

As far as having time to get on the air, I am able to listen to my 2 meter rig
while studying since there is very little action at my school. (Kind of odd
considering how many fellow students I have met that are also Hams.) The only
time that I really get to use my radio is on the hour and a half drive from my
school to my parent's house when I go home for a weekend.

4043. The Origin of "HAM" (complete article)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-20 00:00:00 UTC
From: cstimson@hookup.net
Message-ID: <4b832f$4j2@noc.tor.hookup.net>
Source record: 233629

Got a few replys about the article The Origin of "HAM". So we decided to post it. The article was found in the TFM Newletter of Summer '94 and was written by Marty Shaw VE3TJ.

THE ORIGIN OF "HAM"...it goes something like this:

The word "HAM was applied in 1908 and was the call letters of the first amateur radio club. Albert Hyman, Bob Almy and Peggy Murray first called their station HYMAN-ALMY-MURRAY, but in code it was tedious so they changed it to HYALMU. But confusion resulted between signals from HYALMU and a Mexican ship, MYALMO. They decided to use only the first letters of each name and identify as HAM. In those early unregulated days, amateurs picked their own frequencies and calls. Then as now some amateurs had better signals than some commercial stations. The resulting interference finally came to the attention of Washington, who proposed legislation critically limiting amateur activity.

In 1911, Albert Hyman chose the controversial Wireless Regulaton Bill as the topic of his thesis at Harvard. His instructor insisted a copy be sent to Senator David Walsh, a member of the committee hearing the bill. Walsh was so impressed that he sent for Hyman who went on the stand and described how the little station HAM was built, and he almost cried when he told the crowded committee room that if the bill succeeded they would have to shut down because they could not afford the license fees and other requirements set up in the bill. The debate started and the little station HAM became a symbol of all the amateur stations in the country that were crying out to be saved from the menace and greed of the big commercial stations who didn't want them around. Finally the bill got to the floor of Congress, and every speaker talked about the little station HAM.

That's how it all got started. You can find the whole story in the USA Congressional Record. Nationwide publicity identified the station HAM with amateurs. From that time to this, and probably to the end of time, in radio..."Every amateur is a HAM"

END

Well there it is folks. For those who have not read it already it might make an interesting contribution to your local Amateur Club newsletter.

4044. Strange RFI

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-20 00:00:00 UTC
From: rmolloy@ibm.net
Message-ID: <4b8qgb$185c@news-s01.ny.us.ibm.net>
Source record: 233630

I am trying to nail down a source of RFI that I hear on 3990KHz early in the morning local time.
I get a loud (20db over S9) noise that lasts for 30 seconds. After 2 mins. 10 secs. it starts again. The
noise seems to stop at sunrise, although this may only be that it's being covered by strong signals when
the band opens. The noise seems to be coming thru the antenna since I can also hear it on a battery
operated receiver.

Does anyone have any idea what might be causing this noise or operating on this cycle?

: : Comrade,

: : If CW was so much fun why do you have to force people to learn it? If it'a fun
: : then you can eliminate the test and people will still keep doing it.
: : The test become irrellevant. Your thinking reminds me of the old Soviet Union.

: And your thinking reminds me of a school-child complaining about
: learning the alphabet. After all, being able to read, write, and even
: post to usenet is sure fun...so why should we keep forcing those kids
: to learn the alphabet? They'll surely pick it up on their own, won't
: they?

The alphabet is a fundamental building block for all education vis-a-vis
ones ability to read...and no, not everyone will do it just because it
is fun. In contrast, CW is no longer a required stepping stone to anything
in contemporary radio technology. It may be fun, but it sure isn't
required of anyone involved in technology of today.

: There are dozens of things in life we'd rather avoid doing or learning
: because they seem unpleasant or unnecessary at the time.

Counldn't agree more with that.

: Ironically,
: they're often quite important, and sometimes lead to some very pleasant
: results.

True again, but certainly not of being able to operate CW at speeds above
5wpm. True, it may become enjoyable, but there's nothing related to
the importance of learning CW that has been justified by anything posted
in the last few years of debate on this area.

: Long-term benefits are often hard to sell to short-sighted
: humans on a voluntary basis.

True again, and it has yet to be shown that there's any specific long
term benefits that today justify CW as an entry requirement (beyond
minimum international treaty requirements) for access to the vast
majority of HF amateur spectrum.

From: awinterb@du.edu
Message-ID: <4b96np$k37@mercury.cair.du.edu>
Source record: 233635

The rig works quite well. I've had mine for over a year and am impressed. The switched capacitor audio filter goes down to 100 Hz and helps you isolate a signal easily. I use my txcvr in a townhome with an attic wire loop and have managed to work Asia, Europe, and South America when the appropriate band is open.

The CW offset might be a bit too far off (I think the manual says 700 Hz, but mine might be 750 or so). The built-in keyer's speed can only be adjusted in 5 wpm increments (15, 20, 25, etc.). And, although I have made SSB contacts with it, power peaks are quite low (1 watt?) and there is no speech processing as far as I know.

Output can be adjusted very low, making it a good rig for QRPp operation and probably for use with VHF/UHF transverters.

Index Labs was pretty slow on delivery for a while, and I don't know how committed they are to technical support should something go wrong with the rig.

And that's my 2 cents worth.

Darwin: Near predicted monthly values.
Townsville: About 15% depressed with sporadic E 5-8UT.
Sydney: Depressed 15% until 8UT then near predicted monthly values.
Sporadic E was present throughout the day.
Hobart: Near predicted monthly values to 30% depressed with sporadic
E 1-8UT, 20-23 UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
22 Dec -5 Near predicted monthly values to 10% depressed
with sporadic E.
23 Dec -5 about 10% below predicted monthly values
24 Dec -15 about 15% below predicted monthly values

COMMENT: Slightly degraded conditions are possible from 24 December
for high latitudes due to a week recurrent geomagnetic disturbance.

Wow, yeah, there's something like *10* Items actually for sale.

Geez, I'm tired from all the browsing! ;)

I agree with the new PCS, but I thought (FCC rules and regs) part 15
made some restrictions on operating range??? 60 miles???

Aren't we talking two very tall towers??? to achieve line of sight?

I don't think he wants to put up a ship in the middle for a
repeater:-)

Might want to look and see if Ma Bell or anybody else is jumping that
span with a terrestial microwave that you can either hop a ride on
(for a fee of course) or borrow some tower space (probably also for a
fee) and bounce from your office to the tower then to the tower on the
opposite beach and on to your other office.

BTW if you are trying to connect two networks? go for more bandwidth,
you'll need it almost as soon as you get the two nodes connected
(voice of experience:-)

>power, antenna, etc).

Aside from that, I need to ask a question. If they "cut you off",
which is, in other words, interfering with your transmission, aren't
they violating FCC regulations in doing so? Let's move the analogy to
voice. Let's say that everyone that *I* talk to that used an HTX-202
had what I considered excess noise on their signal, and I refused to
talk to them, and if I heard someone on that I knew used an HTX-202
and I keyed over their signal, or cut them off at the autopatch,
someone would be sic'ing the FCC on me. If I tried to tell someone
that they could only use certain brands of radios to talk, I think the
ACLU would be volunteering to take my case. How can they get away
with this kind of behavior?

Any enlightenment on the issue would be appreciated.

Hi Ron,
Greetings from Tortola Island, British Virgin Islands.

Sorry about Fort Collins. Now that you mention it, I do
remember, from my dim past in the USA, the voice announcement.

Can't hear WWV very well here, most of the locals use CHU.
However, a 1000' hill is immediately between me and WWV!

I'm going to plead "nolo" on the Boulder Gaffe; I'm an old
timer with a fading memory.

73, and Happy Holidays. VP2VBL & KP2BL

4065. Like during the Gulf War some Ham help is needed.

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-21 00:00:00 UTC
From: nacec@winternet.com
Message-ID: <4ba9j5$sa7@blackice.winternet.com>
Source record: 233563

You may remember our communications project during the Gulf War called "The Desert Voices Project", which handled thousands of messages and phone patched, with the help of over 100 volunteers from the Amateur Radio community.

We have just started another military family support project named " Mission Bosnian Bridge". The communications center being developed for this project will be perminant where as the Desert Voices project was constructed on leased government land.

This mission is again to help provide communications support this time between our military serving in Bosnia and their families bach here at home.

This mission, started November 29th, has been covered by CNN and AP thus far.

I sure could use the help of some of you in supporting our troops and their families. It is a huge undertaking.

Please let me know if you or your Amateur Radio Club would be interested help us give the gift of military family communications.

More information can be found on "Mission Bosnian Bridge" in our web site at:

http://www.nacec.org/bosnia.html

Our Main Page is: http://www.nacec.org

Please contact me by E-mail if you feel you can help.
I can be reached by E-mail at: eaddy@nacec.org

Thanks in advance for caring enough to come forward to help.

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
cd/rom's soon and TNC/PACKET DOOR IS UP & RUNNING !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
5,800 FILES IN 115 FILE AREA'S..so far !
GOOD NEWS THE LANDLINE TO HAM PACKET DOOR IS UP AND RUNNING*******
ARE YOU ON THE HAM USERS LIST ???????

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.

4070. Re: LARC: Gay Ham Club Activities

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-21 00:00:00 UTC
From: wa6ube@aol.com
Message-ID: <4bapmk$5bt@newsbf02.news.aol.com>
Source record: 233568

John L. Rouse writes:
>this that boosts radio.amateur.misc into the verbal zoo it seems to be
>turning into. Too bad. There's a lot of very useful information to be
>found between the postings of the loonies and the ravers. The LARC group

>has every right in the world to post its message.
>If you don't agree with it, no problem -- ignore it. But there's
>absolutely no need to resort to this kind of base scurility. It's bad
>enough the social misfits use this group to rave on about whatever it is
>they rave on about, but people should not be confronted with this sort of

>garbage when they
>check in here.

Thank you John, for your reply regarding offensive posters and language
here.
There is too much divisive rhetoric of the "us versus them" catagory. I
also agree
that LARC, as any other amateur radio group should not be harassed by
others

I found it in fonts "Souvenir" and "SymbolProp" using the
Character Map feature of Windows 3.1. I know it's in at least
one other font that I've seen. VP2VBL

>>>Granted, the wording isn't exactly what I would use, but have you >>checked out the renewal requests from some of the other magazi=
>nes? I >>sometimes get them up to six months before my subscriptions expire. If >>you don't subscribe to another magazine, ask you=
>r wife! I am sure she >>has seen the same pattern.

I don't think the ARRL circulation department is behaving any differently than any other publisher. Lots of things to process, etc., and these things take time. There are lots of ARRL members to serve, and I think they do a great job. I appreciate the ARRL sending my renewal notice early so I don't forget to do so, wait too late, etc., and miss an issue.

>>Sigh. Everyone else jumping off the Empire State Building still wouldn't >>compel me to do so.

I see this cup as half full, not half empty...

>I, for one, am glad that magazines send renewal notices early and often.
>I subscribe to Linn's stamp-collecting newsletter and it is really pot >luck as to whether I will respond to the first or last renewal notice.
>If they only sent one, 30 days before the renewal date, chances are real >good I would forget to renew and not notice until I missed a few >issues.

Same here...I'm a true procrastinator :-)

Merry Christmas!

Mark, I recall back in the late 70's early 80's there was a small movement
for this
but with cordless phones no occupyong those frequencies it killed that
market real quick!

>Does anybody know what font has the slash through the zero?<

If you're talking about Windows, almost all of them have
it. Hold down the <alt> key, and type "0216" (without
quotes) on the number pad.

It turns out, you can subscribe to QEX for more than a year at a time.
I currently have more than 9 years left before I need to renew.

4078. Re: VANITY CALLSIGN PGM - UPDATE PLEASE?????

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-21 00:00:00 UTC
From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <4bclld$5k9$1@mhade.production.compuserve.com>
Source record: 233576

The rules are:

--You may apply for any call format (including prefix) that
you are eligible for, including combinations that have never
been issued. For example, a Novice could apply for WM4AAA.
A General could apply for any 1x3, starting with K, N, or
W.

--The call you request does NOT need to correspond with your
geographic area. For example, a licensee in California can
apply for a W2 call.

--If you live in the "lower 48" you are NOT eligible for an
"off-shore" prefix such as KH#, KP#, or KL#.

Happy Holidays,
de Hans, K0HB

DX Bulletin 64 ARLD064
From ARRL Headquarters
Newington CT December 21, 1995
To all radio amateurs

SB DX ARL ARLD064
ARLD064 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, Akio, JA3JM, Karl, PS7KM, Rony, PS7AB, the PY-DX Bulletin, Dick, K7BTW, and Steve, WB8IMY. Thanks to all.

CAMBODIA, XU. Mike, VS6WV, expects to be in XU-land frequently. His next visit will be January 8 and 9, when he will sign XU6WV. Activity will be mostly CW on 40, 80 and perhaps 160 meters.

GHANA, 9G. Steve, PA3GBQ, will vacation in Accra December 31 to January 15. He will operate from the station of 9G1BS, probably signing 9G5BQ. QSL via PA3GBQ.

SAN FELIX ISLANDS, CE0. CE3HJB and CE3CDV are in the early stages of planning a DXpedition for 1996.

SOUTH ORKNEY ISLANDS, LU6. LU6Z is at the Argentinian Naval Antarctic Base located on Laurie Island. Check 7005 kHz beginning around 0230z or 3505 kHz around 0500z. Sometimes LU6Z is on the air as early as 0245z. QSL via LU6EF.

TANZANIA, 5H. Giovanni, I5JHW, will be signing 5H1HW January 1 to 9 from Zanzibar Island, IOTA AF-032. He will be on all bands and use CW, SSB and RTTY. QSL via I5JHW.

MAURITIUS, 3B8. 3B8/JA3JM is active until December 26 on all bands, including A010 and 13. QSL to Akio Shimizu, 3-6-22 Kasugaoka, Jujiidera, Osaka 583, Japan.

MAYOTTE, FH. Akio then moves on to Mayotte as FH/JA3JM from December 27 to 31.

REUNION, FR. Before going home, Akio stops in Reunion from January 1 to 6 as FR/JA3JM.

ITU HEADQUARTERS GENEVA. Luc, I1YRL, will be operating 4U1ITU in January, February and March. QSL via I1YRL.
MONACO. Listen for Luc signing 3A/I1YRL during the first three months of 1996. QSL via I1YRL.

CAYMAN ISLANDS, ZF. Listen on the air for Carlo, I4ALU, between Christmas Day and January 3. Check 13 kHz up from the band edge on most bands, as well as 10103, 18070 and 24893 kHz.

PIRATES COVE. Rony, PS7AB, reports that the station signing ZY0PT and supposedly operating from Saint Peter and Paul Rocks during December is a pirate.

ADDRESS CHANGE/QSLING HINT. QSL Manager Karl, PS7KM, has a new address. It is Karl M Leite, Rua Estacio de Sa 1838, 59054-580 NATAL, RN - Brasil South America. Karl reminds us to NOT write any call signs on the envelopes. This helps get the mail delivered unmolested.

>73, doug

And your money is in their bank account! I think this is one of the motivations to bill so early. All magazines are alike in this respect, so no fingers pointed in particular at the ARRL.

But.... I'll get a notice 4 months before my subscription expires, pay it, and then forget about it. Then, just prior to when my subscription would have expired, I get another notice that my subscription is about to expire. If I pay it again, I'll notice somewhere down the line in the fine print that my subscription expires in 2 years. They seem to ignore the fact that I have already renewed my subscription! Or have suffered a convenient memory lapse. A four month processing delay? I don't think so.

Now, bear in mind that I don't have a 2 year subscription - I now have two one year subscriptions. (If they're smart they won't send them concurrently.) When the first is about to expire they'll begin sending out notices again, even though I still have another year left to go. If I make the same mistake again, I'll have three one year subscriptions. An so on, ad infinitum.

I really think this is what they want you to do, because it seems they try so hard to get you to do it. It's harmless, and they have all kinds of other reasons with which to justify it!

The subscription renewal business is big - how elso could they afford to pay Ed McMahon?

4082. HELP!! Need Schematics for Repeater

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-21 00:00:00 UTC
From: plpath@ucrac1.ucr.edu
Message-ID: <4bca7m$f00@galaxy.ucr.edu>
Source record: 233580

Apparently the company that manufacturered our local club repeater has gone belly up and we need schematics and
any other info that can be obtained as backup. If anyone has info regarding schematics, sources for on FTP sites, etc., please contact me at my e-mail address (plpath@ucrac1.ucr.edu). Your responses are greatly appreciated.

The company was: Advanced Computer Controls
2356 Walsh Av., Santa Clara, CA 95051

We need info for a RC-85 repeater controller. If you need more specifics than this let me know.

Yes, I like it too.

However, while I was evaluating it, I discovered that the faster computers (such as the Pentium 100) appears to be too fast for the code speed setup.

The program seems to get confused.

I am going to attempt to contact the author to see if a modification is available.

There are quite a few people that are General Class or greater,
that are just as "illiterate" as those no-codes they bash. I myself
am a Tech-Plus, don't use CW, but I do keep up my speed to 8-10wpm.
For those that chose to upgrade beyond No-Code AND bash those who
chose not to... I'm sure you'd agree with me that they BEST know and
understand that theory, rather than go to a club class, and get the
answers spoon-fed to them. I know an Advance who passed her tests
by that exact method. She's still as stupid as she was when she was
a Tech-Plus.

To close.... your license class DOES NOT have anything to do with
your status of "smarts". You can teach a monkey to talk using
sign-language, yet it doesn't mean that the monkey is smarter than you.

Merry Christmas, Happy Yule, Honaka (sp) ect ect ect...

4088. Re: Advice Plse: TS-690 vs TS-850

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-21 00:00:00 UTC
From: Brian Gilhuly VE3BGB <brian@synapse.net>
Message-ID: <30DA1E58.2780@synapse.net>
Source record: 233586

I chose the 850 after a lot of indecision, and I haven't been sorry. The receiver in the 850 is much better than that in the 450/690, which makes a major difference for DXing. Likewise the more extensive filter options, especially if you work CW or narrowband digital modes. And the automatic antenna tuner works very well.

Now, if I could just get around to building/buying a 6 m transverter... :-)

Lots of operators in the Lowfer band (160-190 Khz)..
Restrictions still apply:

50 ft MAX antenna PLUS feedline length (both together not
seperate)
1watt MAX power
ANY mode as long as it fits in the 30Khz bandwidth
MOst use CW or even SOME SSB now...

There is an active lowfer msg area on FIDONET and I think in the
Compuserve HAMNET area...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 DECEMBER AND FORECAST FOR 23 DECEMBER - 25 DECEMBER
Note: Services will be provided at normal weekend levels for
23-27 December.

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 21 Dec
Daily Proton Fluence >1 MeV: 3.4E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.1E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Dec 24 Dec 25 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Dec: 71/6

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 21 Dec
Learmonth 12 2322 3243
Fredericksburg 14 6
Planetary 12 4

Observed Kp for 21 Dec: 0011 1222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
23 Dec 10 unsettled
24 Dec 15 unsettled
25 Dec 10 unsettled

COMMENT: The recurrent disturbace expected to start 24 December
may have arrived early, unsettled conditions are expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Dec Normal Normal Fair-Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Dec Normal Normal Fair
24 Dec Normal Normal Fair
25 Dec Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
22 Dec -20

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values until 15UT then 40% depressed
with sporadic E 18-22UT.
Townsville: Near predicted to 20% depressed.
Sydney: 15% depressed with sporadic E 0-9UT and spread F 13-18UT.
Hobart: 30% depressed with sporadic E 0-5UT and spread F 9-15UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
23 Dec -10 about 15% below predicted monthly values
24 Dec -5 about 10% below predicted monthly values
25 Dec -5 about 10% below predicted monthly values

COMMENT: Slightly degraded conditions are possible for high latitudes
due to a week recurrent geomagnetic disturbance.

>Any enlightenment on the issue would be appreciated.

Well in packet, the term "cut you off" doesnt mean "interfering". Your
node, mailbox, BBS, station, ect. can be set not to accept certain callsigns.
You store the 'list' of calls either in the operating firmware of the TNC, or
the controlling software. This doesnt stop and/or interfere with that station,
just doesnt let that person from useing your equipment.

The only call I keep in my list is "NOCALL". This is the default 'callsign'
of a TNC when its powered up, and the user doesnt put his call in.

Other than purposful and malicious illegal transmissions, I would try to
work the problem out with the station, rather than 'lock' them out.

Happy holidays :)

4099. TELEMETRY: need info

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-22 00:00:00 UTC
From: Michelle Nicolls <mnicolls@snowcrest.net>
Message-ID: <4bdlbn$dbb@news.snowcrest.net>
Source record: 233500

Does anyone have any information on building telemetry transmitters?
216 mhz preferably but 2m or 70cm ok. Is telemetry tx on amateur band legal
(licensed of course)? Will a scanner with a attenuator work as a receiver?
Any info welcome!
tnx, Troy KE6QMX

4100. Re: No Code Solution

: : : Comrade,

: : : If CW was so much fun why do you have to force people to learn it? If it'a fun
: : : then you can eliminate the test and people will still keep doing it.
: : : The test become irrellevant. Your thinking reminds me of the old Soviet Union.

: : And your thinking reminds me of a school-child complaining about
: : learning the alphabet. After all, being able to read, write, and even
: : post to usenet is sure fun...so why should we keep forcing those kids
: : to learn the alphabet? They'll surely pick it up on their own, won't
: : they?

: The alphabet is a fundamental building block for all education vis-a-vis
: ones ability to read...and no, not everyone will do it just because it
: is fun. In contrast, CW is no longer a required stepping stone to anything
: in contemporary radio technology. It may be fun, but it sure isn't
: required of anyone involved in technology of today.

Bill, the comment you made said nothing about importance or utility,
only that "if something is fun (after you learn it), you don't need to
force people to learn it." That is bunk. Whether or not it is
important is another argument altogether, and that boils down to a
matter of perspective and opinion, not empirical right or wrong. In
any event, your basic premise is still wrong..."Comrade".

4101. Hams with Macintosh Database

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-22 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-2212950540310001@wd1v.mv.com>
Source record: 233502

"Macnet Roster" (ver. 725) has just been updated and is now a stand-alone application! The version number = the number of hams using Macs.

"Macnet Roster" lists:

o CALL SIGN @ HOME PBBS
o FULL NAME
o ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

of every known amateur radio operator in the world that uses a Mac computer.

You can use "Macnet Roster" to find other Mac users that you can then communicate with directly. Compare notes on software, applications, ideas, hints and kinks, and make new ham friends that use the same computer you do. (You already know how cool you are - imagine accessing "the rest of us"!)

If you'd like the latest "Macnet Roster":

Send me a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER".

Or connect to my home page via the WWW

http://www.mv.com/ipusers/wd1v

Put YOUR INFO (via EMAIL or disk using TEACH TEXT) if you'd like to be included in the "Macnet Roster" or send an update to your stats to me via pkt or email anytime.

73,

FYI: The latest version of Digital Scope.FAQ <304> is on my WWW Home Page.
(All opinions are my own, including Digital Storage Scope.FAQ)

Best Holiday Wishes!

Jack,

There is also software (shareware) availble to 'slow' your computer down.
It is a TSR, but works fine on any program. I use it all the time on my
100 MHz machine when I run my very old programs. I even set it up in a
batch file that loads the TSR, run the desired program, then unloads it
when Im done.

Im at work right now, and cant remember the name of the one I got...but there
are lots of 'em out there. If you would like a follow up...just e-mail. :)

Happy holidays, & 73.

.....and later

> --If you live in the "lower 48" you are NOT eligible for an
> "off-shore" prefix such as KH#, KP#, or KL#.

I studied the 2x1 callsigns and noticed the A* calls stop
at AL. Does anyone know just what exactly are the acceptable
two letter prefixes?

Is it like this for the lower 48?
Wa-z, except h,l,p
Na-z, except h,l,p
Ka-z, except h,l,p
Aa-i,except h

Clearly WP4 is offshore (e.g. Puerto Rico), but is WL4 OK
for the lower 48? (WL7 would not be...)

4106. GB2RS News 24th December 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-22 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <819668949snx@llondel.demon.co.uk>
Source record: 233507
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 24th of December and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners. And Season's Greetings to all listeners to this GB2RS broadcast.

Following the news, we will be bringing you the first of a two-part "GB2RS News Review of the Year", which has been prepared by GB2RS newsreader Vic Kusin, GM4HCO. That will be followed by the solar factual data and forecast, and then the regional news. The second part of the review of the year can be heard in next week's bulletin, on New Year's Eve. We will be broadcasting a review of propagation in 1995 in the first GB2RS next year, on the 7th of January.

In the January edition of RadCom it was announced that new RLOs had been appointed within Zones C and G with effect from the 1st of January 1996. This statement was incorrect. The persons listed are in fact nominees for the position of RLO within these zones, and will be appointed if acceptable some time after the 1st of January. The newly-elected Council members for Zones C and G have been informed of the situation.

A new GB2RS broadcast on 70 centimetres began recently in the West Herts and Aylesbury area. It is broadcast from the station of G3MEH on channel SU21, simultaneously with his existing 6 metre and 2 metre FM broadcasts at 1200 local time. Reports would be very welcome to establish the coverage area.

And another new 70 centimetre GB2RS service will commence on Sunday the 7th of January. It will be an evening broadcast from Portland in Dorset on channel SU21. It will be transmitted at 1930 local time from the station of G1OCN, with G7OLW as reserve newsreader. Good coverage is expected of the south coast area and reports - especially from Novices - will be welcomed.

A new 2 metre beacon was brought into service last week. GB3NGI on 144.942 MHz is situated in the north-east of County Antrim at locator IO65VB, beaming Northeast and Southeast. So far reports have been received from IO80 and JO02 squares and further reports would be welcomed by beacon keepers GI6ATZ and GI4TAP, whose addresses are both in the RSGB Call book. Further VHF and UHF beacons are planned, so that a major set of propagation indicators will be available from this site in the far northwest of Europe.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From the Aland Islands, a group of seven Finnish operators will be using their OH0 callsigns from Wednesday the 27th of December until Tuesday the 2nd of January. Activity will be on all bands, on CW, SSB and RTTY. Special callsign OI0MEP will be used on the 1st and 2nd of January, including on 160 metres, using a vertical antenna supported from a helium balloon.

From the Cayman Islands, ZF, I4ALU will be active from Christmas Day until the 3rd of January on all bands 80 to 10 metres, CW only. Check 13 kHz up from the band edge, and around 10103, 18070 and 24893 kHz.

And a group of Nigerian licensees are planning to be active as 5N4OTB from Bonny Island, which will be a new island for the RSGB IOTA awards, from the 23rd to the 28th of December, SSB only on all bands.

The 2 metre repeater near Stoke-on-Trent, GB3VT, which operates on channel R5, returned to service on the 10th of December, having been off the air due to faulty control logic.

Now the contest news, and we know of no HF contests either this weekend or next weekend.

The RSGB VHF / UHF "Christmas Fun Contest" takes place on 70, 144 and 432 MHz between Tuesday the 26th and Friday the 29th of December inclusive. The rules are in the August RadCom.

Now here is the first part of the "GB2RS News Review of the Year", prepared by GB2RS newsreader Vic Kusin, GM4HCO:

In January 1995, Ron Broadbent, G3AAJ, was awarded an MBE in the New Year Honours list, in recognition of his services to amateur radio. Ron is secretary of the amateur satellite organisation AMSAT-UK and editor of the monthly magazine OSCAR News.

A team from BBC Radio Five's Sibyl Roscoe Show visited the RSGB Headquarters and recorded a programme about packet radio, which featured interviews with Neil Lasher, G6HIU, and RSGB General Manager, Peter Kirby, G0TWW. The programme was broadcast on the 9th of January.

Clive Trotman, GW4YKL, was officially installed as the RSGB's President at Bridgend, Mid Glamorgan, on the 14th of January. In attendance were representatives of the French, Belgian, Dutch, German and Irish national societies. The society's Founders Trophy was presented to Hilary Claytonsmith, G4JKS.

1995 was the centenary of the first practical demonstration of radio by Guglielmo Marconi and a number of events were held throughout the year to commemorate this. A new permanent special event station GB2GMM, which stands for Guglielmo Marconi Memorial, became active. Operated by members of the West Wight Radio Society, the station is located in Alum Bay on the Isle of Wight, on the actual site used by Marconi. The West Wight Radio Society has been awarded a grant of over 2,000 by the Isle of Wight Community Council to help towards the establishment of a museum on the site of the world's first permanent wireless station.

On a sad note, Jack Hum, G5UM, passed away in January. Known to most radio amateurs, Jack was a Vice-President of the RSGB and a prolific writer on amateur radio subjects - particularly VHF. Jack's widow, Grace, gave permission for his callsign to be re-issued to the Leicester Radio Society Contest Group, which gave it its first airing during the VHF National Field Day in July.

The first of the RSGB's major events of the year was the VHF Convention, held at the Sandown Exhibition Centre on the 19th of February. This, the 40th VHF convention, was attended by over 2600 visitors and was well supported by traders and exhibitors, who all reported brisk business. The RSGB bookstall was busy throughout the day and all three lecture streams were well attended, with the VHF Contesting and DXpedition to Jordan talks attracting particularly large audiences.

The 19th of February was also Thinking Day on the Air, when Guides throughout the world were able to communicate using amateur radio. Well over 200 UK stations were operational using the GB callsign prefix, as well as many using the special club prefixes.

The 23rd of February marked an important anniversary in the world of radio. It was on that day in 1895 that Guglielmo Marconi in Italy successfully transmitted for the first time. A new beacon marking the centenary and using the callsign I1M is now transmitting on 21.151 MHz.

The British Geological Survey in Nottingham and the Merseyside Maritime Museum in Liverpool were hosts to special event stations GB0JAS, GB2JAS and GB6JAS, which were part of the JASON project "Expedition Island Earth", an annual scientific expedition of scientists and students. NASA technology was used to look back at Earth from space and daily satellite broadcasts brought the project live to centres in the USA, Canada and the UK, where schools, colleges and the public were able to see science in action. The special event stations set up skeds with research vessels, remote research stations and other JASON project participants. A special aim of the JASON Special Event stations was to encourage a greater interest in the UK Novice Licence scheme.

The Driver and Vehicle Licensing Agency informed the Society that they were not able to release the "G" registration prefix early and exclusively to radio amateurs. They were fully aware of the radio amateurs' desire to acquire such marks and protect them from exploitation by unscrupulous dealers and they confirmed that, as and when they were ready to consider the release of the "G" prefix marks, they will be in touch with the Society again to discuss how best the legitimate interests of radio amateurs may be served.

The International Marconi Day takes place each year on the Saturday nearest Marconi's birthday. Held this year on the 22nd of April was the 8th I.M.D. and by far the biggest yet. Over 40 special event stations took part from locations around the world, with 12 of them in the UK. The RSGB headquarters station was using the callsign GB100IMD for the first time and made 850 contacts, many with other Marconi Day stations. This coincided with the RSGB HQ annual Open Day, which had a record

attendance of visitors as well as representatives from the Radiocommunications Agency, SSL and major amateur radio equipment retailers.

Over the weekend of the 6th and 7th of May, over fifty British special event stations commemorated VE day - the end of the Second World War. The RSGB Council has agreed to support the issue of the special prefix "GR" in remembrance of all those who lost their lives and to commemorate the start of peace. The RSGB also participated in the massive VE Day celebrations in Hyde Park by sharing a stand with the Air Training Corps, where visitors were introduced to amateur radio and given copies of D-i-Y Radio and RadCom, as well as information on how to become licensed. A million people attended the show over the three days.

The 16th of May was St Brendan's day, named after the 5th century Irish explorer who travelled widely in the North Atlantic region. The Brendan Trophies are a pair of Waterford Crystal vases which will be awarded by the Irish Radio Transmitters Society to the first stations to establish two-way radio communication across the Atlantic on the 2 metre band. The rules of this intriguing "2 metre Transatlantic Challenge" were published in the June 1995 edition of RadCom.

The RSGB DX News Sheet is a weekly publication which provides the most up-to-date news about DX stations, Islands On The Air operations and contest news. In June this year Chris Page, G4BUE, took over as the new editor of the DX News Sheet and inaugurated the new monthly DX News Magazine. Contributions to both publications should be sent to Chris, whose address is correct in the RSGB Call Book. For a free sample copy of the DX News Sheet, please write to the RSGB Headquarters. The address and telephone number will be given at the end of this broadcast.

At the Drayton Mobile Rally on the 14th of May, the Worked All Britain organisation presented a cheque for 12,500 to the Royal National Lifeboat Institution. The donation is the result of the Worked All Britain Silver Jubilee Appeal which ran for the last three years, raising funds by selling WAB books, raffles, sale of surplus equipment and other activities. The money provided a D-class lifeboat, a semi-rigid inflatable craft used for inshore rescue. The lifeboat was named "C John Morris DFM, G3ABG" in memory of the founder of the Worked All Britain Organisation at a ceremony at the RNLI Headquarters in Poole later in the year.

On Friday the 2nd of June an excellent sporadic E opening took place, with double hop Es propagation to Israel and the Cape Verde Islands. G4FVP in County Durham reported that the opening started quietly with an aurora on the afternoon of the 1st, but 50 MHz recovered by mid-evening with intense sporadic E, and the Crete beacon was still being heard after midnight. On the 2nd, GM0CLN in East Lothian found the 2 metre band open to Italy from 1507 to 1545 hours. Sporadic E tends to be more intense during sunspot minimum years, due to the higher levels of electron fluence that take place at this time.

In a Gazette Notice published on the 23rd of June, the Radiocommunications Agency announced changes to the amateur radio licence. These allow the RA to publish the callsigns of amateurs who have requested that their particulars be withheld, thus ensuring that callbooks can show a comprehensive list of callsigns issued. In addition, the RA can publish the names and callsigns of amateurs who have had their licence revoked. This should help counter piracy and spectrum abuse. The full text of the Gazette notice was printed in the July edition of RadCom.

The DTI announced an increase in Morse Test fees, effective from June 1995, to 18 for the 12 words per minute Morse test and 13 for the Novice 5 words per minute test.

The end of June saw a major tropospheric opening, affecting all bands from VHF to microwave. G4NVD had a contact with DG0BBL on 2 metres over a distance of 557 kilometres, running less than 200 milliwatts on FM. G4FVP in County Durham experienced a sporadic E opening into the Mediterranean and several GM stations worked into the Netherlands on 2.3 GHz. On the 29th of June, G4DDK in Ipswich worked PA0EZ on 24 GHz. The distance was 268 kilometres, with G4DDK running 125 milliwatts and PA0EZ only 80 milliwatts. This was a new UK record for the 24 GHz band.

That was the first part of the News Review of the Year, prepared by GB2RS newsreader Vic Kusin, GM4HCO. The second and concluding part will be broadcast next week.

And now the solar factual data:

The period from the 10th to the 17th of December has seen solar activity at very low levels. No active regions are on the disc, no flare activity was reported, and geomagnetic activity has remained quiet. Sunspot counts declined every day from 29 on the 11th, to zero by the 16th, giving a mean of 14. As expected, solar flux levels declined from 73 to 70 units by the 16th, with the quieter side of the sun looking our way. The average was 71.5 units. X-Ray flux has remained very low and was at A1.0 every day. The 90-day mean solar flux remains at 75 units, and the electron fluence remains at low levels.

The geomagnetic activity has been quiet, with Ap levels down to only 1 on the 13th, but becoming unsettled by the 16th, with a level of 10, and an average Ap of 5 units. The daily aa indices, as supplied by the British Geological Survey for the 5th to 11th of December, averaged 10.3 nanoTeslas, which is about K2, or quiet.

I'll repeat the figures: Spots - 14, Flux - 71.5, Ap index - 5, X-Ray flux - A1.0.

Due to the continuing unrest in France we have not been able to get any ionospheric data. However, the smoothed sunspot count for May 1995 was RI 19.4.

And finally the solar forecast:

This week the slightly more active side of the sun will be looking our way and solar flux levels are expected to rise to 72 units. Recurrent coronal hole effects are expected to produce geomagnetically active conditions from the 24th to the 29th. Ionospheric levels are expected to be depressed particularly on the 26th, with storm conditions at higher latitudes. MUFs in the south during the day are expected to be 17 MHz, and the darkness hour lows about 7.0 MHz. The northern levels will be down on these by at least 2 MHz.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Sierra and G7 Victor Yankee series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

>One or two 20 minute sessions a day should not be too difficult for anyone...

I'd agree with that. I set a cassette recorder next to a PC, made random code tapes at various speeds with a code program, and brought 'em in to work. 15 minutes of practice with the headphones on while munching my sandwich. To get to 20 WPM, I put the program on a PC in the lab, where I wouldn't disturb anyone, and munched my sandwich there.

Commute? Got a cassette player in the car? You have time to do code. Twice a day, even. Use a battery-powered cassette machine if you don't have one in the dash.

While the NEED to know code is pretty much gone, the license requirements are still there, and you're still going to have to meet them. Time isn't really an excuse.

See above re: homosexuals vs. homosexual acts. I suppose you'd get all
grossed out about non-missionary-style sex between men and women (also
sodomy). You also don't have to describe homosexual acts -- no one is
holding a gun to your head.

Message-ID: <4berot$cl3$1@mhafm.production.compuserve.com>
Source record: 233513

I've seen young hams who had a real case of mike fright sit down to work their first contest, practically needing to be talked through their first few contacts, then be running a frequency and working two dozen stations while I went in for a cup of coffee. Contesting provides an environment in which contacts are numerous and in which there's an excitement, born of competition, that helps many operators become more confident on the air and more proficient in getting the most out of their rigs and out of what may not be ideal band conditions. Contests are not my main interest in ham radio, but I sure do enjoy them.

>>> CW is no longer a required stepping stone to anything in
>>> contemporary radio technology

Ummm. This is a carrier. It says, "I can oscillate."

This is a modulated carrier. It says anything you want it to say.
Morse Code is the international standard for modulation of a carrier
by means of on-off keying. FM is the only mode that does not require
the ability to control carrier amplitude as a prerequisite to conveying
information. And satellites, moonbounce, and QRP operation (all areas
in which hams are doing interesting technical innovation) all have
power budgets, phase shift characteristics, and/or path losses that make
FM entirely impractical and maintain the utility of Morse Code.

On balance, the purposes of the Amateur Radio Service are advanced much
more than they are held back by the influx of VHF/UHF operators that has
taken place due to a license with no Morse requirement. And if hams
with other types of license would treat Technician Class licensees as
folks who are halfway there, instead of treating them more rudely than
they treat interested people with no license at all, then the whole
atmosphere of the service would be improved. But Morse is still valuable,
just as riding a buicycle is still a valuable skill no matter how cheap
cars may be compared to what they cost (in terms of purchasing power)
twenty years ago. Commercial services move to other modes based on
costs of training and operator time -- but for us, those factors are
by definition irrelevant. We do this because it's fun.

4116. Re: Why Morse Code Today?

Sending of Morse is vastly underused in most efforts to teach the code.
I have seen many people who were struggling at 4 wpm jump to 8 wpm
with remarkable speed after they started sending as well as listening.

: Not flame bait at all. Just my experience with the local contesters.
: They all look like poster boys for the American Heart Association
: with their enormous beer guts, quadruple chins, and fat butts.

I'd say this is more of a blanket statement of hams in general or of
packet types. I have seen some extremely large individuals; many
of whom appear to have at least three or four HTs around their
belts. Since most contesters devote their radio time to HF operation,
the afore mentioned examples of flab could only be the VHF types.

Not to say that there aren't overweight contest ops, but most of the
300 contest ops that I know are quite thin; the type who have to climb
a 125/200 foot tower every time the wind knocks one of their phased
stacks out of phase.

Also sadly typical of the "pro-coder" mentality. The (mistaken) belief
that the ham bands belong to them and that anyone who cannot justify
devoting a great deal of energy and time to learning something of which
they have no use for, other than fufilling an "initiation rite", is not
worthy of having the right to transmit on "their" frequencies.

>a Tech-Plus.

I'd agree wholeheartedly with this premise. The issue that many
"no code bashers" have isn't the fact that you cannot copy/send
morse, but rather deals with the fact that the licensing standards
are continuously being lowered, in an attempt to be "all inclusive"
so anyone who wants to be a ham can be a ham with little or no
effort.

There are the "no-clues" as well as the "instant Extras". Perhaps
the no-code license is taking the brunt of the heat associated with
this issue, because its the most recent sigificant event in
amateur radio that illustrates this fact. If you go back in time
you'll see that a similar occurances have happened before, for example
the novice enhancement and incentive licensing.

I have a great deal more respect for a "no-code" who shows up at a
local club meeting and will sit at the table with me pouring over
a schematic of my repeater so we can determine how to best integrate
the new controller than I do for the "extra" who simply sits there
and babbles about how to make a di-pole.

ARRL DXAC and Awards Committee Agree
Pratas Island goes on ARRL DXCC Countries List

The ARRL DX Advisory Committee (DXAC) has voted 12 to 4, and the Awards Committee, has voted unanimously to add Pratas Island, BV9P, for contacts made January 1, 1994 and after. This is based on DXCC Rules Section II, Point 2(a) (Separation by Water). Pratas Island, located in the South China Sea, is administered by Taiwan.

QSL cards will be received by the DXCC Desk starting April 1, 1996. Cards received before that date will be returned without action.

Because of QSLing irregularities, it will be necessary for anyone who has a picture card from the January or March 1994 operation to obtain a replacement card from QSL manager KU9C. The picture cards are not acceptable for DXCC credit.

do so.

: Commercial services move to other modes based on
: costs of training and operator time -- but for us, those factors are
: by definition irrelevant. We do this because it's fun.

Testing for MORSE should not be baded on any rational other than a
well defined need to do so. The fun or enjoyable aspect of any mode
does not and should not mandate it's use or knowledge. In fact, if CW
is so much fun, than there will always be a segment of amateurs that
continue to use CW as well as a percentage of new amateurs that
will VOLUNTARILY learn CW and use it. If fun is the only justification
(and I have not seen one credible argument to the contrary) then
(1) test only 5wpm to satisfy the international treaty (2) create CW only
subbands in each HF band and (3) reuire some higher than 5wpm CW
test element to operate in those CW only HF segments.

Announcing the DXtreme Amateur Radio Station Log System(tm) Version 2.0

Designed for HF DXers, this affordable logging program lets you enter your contacts and track the DXCC performance of your station. DXtreme(tm) features attractive, easy-to-use screens, and a full range of inquiries and reports.

PC/AT-compatibles, 80386DX+, MS-DOS 5.0+. Write for a copy of the data sheet and more information, including prices and availability.

A Demo version of DXtreme is now available! It's free over the Internet or for a nominal charge via regular mail. To obtain the Internet Demo version of DXtreme, contact me and I'll send the zipped DXtreme Demo file to you via e-mail.

Thanks and 73,

Bob Raymond, NE1I

4132. Re: The Origin of "HAM" (complete article)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-22 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <pNHF9pY.sanderman@delphi.com>
Source record: 233533

One problem...
There is NOTHING in the Congressional Record to support this "story". Has anyone else done any research into this? Apparently, the original writer never did, and this is another popular fable that has no basis in fact.

4133. This Week in Amateur Radio #143 (for air through 12/29/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-22 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <pzIkN5d.sanderman@delphi.com>
Source record: 233534

Here is a summary of news items covered on edition #143 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 29-Dec:
-
1. NTIA Proposes "Wide Area Land Mobile" Use for 2300 MHz Band
2. ARRL Asks the FCC to Relax Amateur Spread Spectrum Rules
3. Ham Radio to be Aboard "Tournament of Roses" Parade Float
4. Amateurs Worldwide to Hear Christmas Greetings from Space
5. SAFEX II Equipment Sent to Russia for Launch to MIR
6. "Radio Canada International" to Leave SW Bands in March
7. "The RAIN Dial-up" from Chicago
8. Photos of Phase 3D GPS Experiment Equipment on Posted on WWW
9. "This Week" Expects Move to Telesat Anik E2 Satellite
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. Weekly Propagation Forecast with George Bowen, N2LQS
12. Upcoming Special Event Stations
13. "Amateur Radio Newsline" - Edition #958 from Los Angeles
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EST) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
courtesy of the Niagara-Mohawk Amateur Radio Club. The program is
repeated Mondays at 8:00 PM.
-
Due to the loss of satellite facilities, the service is being
carried exclusively on 160 meters and on the local 145.33 repeater.
The "Tech Talk Network" expects to complete negotiations with a new
satellite uplink carrier by the beginning of January. "This Week
in Amateur Radio" will return at that time. Details will be posted
as conditions warrant. All affiliates are requested to contact the
producers for further information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach

them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

A while ago Write-Log, a Windows-based contest logging program, was available by FTP.

Is it still? Would you know where?

Tnx, Bob WN3K

4136. IPS Daily Report - 23 December 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-23 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <4bi2n7$3kr@flare.syd.ips.oz.au>
Source record: 233389
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 DECEMBER AND FORECAST FOR 24 DECEMBER - 26 DECEMBER
Note: Services will be provided at normal weekend levels until
27 December.

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 22 Dec
Daily Proton Fluence >1 MeV: 3.1E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.8E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Dec 25 Dec 26 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Dec: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 22 Dec
Learmonth 10 3223 2322
Fredericksburg 9 17
Planetary 15 16

Observed Kp for 22 Dec: 3334 3243
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Dec 15 unsettled to active
25 Dec 12 unsettled
26 Dec 10 unsettled

COMMENT: A weak recurrent disturbace is expected to start today,
unsettled conditions are expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Dec Normal Normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Dec Normal Normal Fair
25 Dec Normal Normal Fair
26 Dec Normal Normal Fair
COMMENT: Slightly degraded conditions expected for high latitudes due
to a week recurrent geomagnetic disturbance expected 24 December.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
23 Dec -30

Observed Australian Regional MUFs:
Darwin: 15-30% depressed with sporadic E 0-3UT, 7-8UT.
Townsville: Near predicted monthly values until 7UT then 15%
depressed with sporadic E 0-1UT, 20-22UT.
Sydney: 15-30% depressed with spread F 7-13UT.
Hobart: 15-30% depressed with spread F 12-18UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
24 Dec -20 15% depressed with sporadic E.
25 Dec -10 about 10% below predicted monthly values
26 Dec -10 about 10% below predicted monthly values

COMMENT: Slightly degraded conditions are possible for high latitudes
due to a week recurrent geomagnetic disturbance.

Excuses, excuses. "I don't know how to read. I should be exempt from
taking the theory too". Waaaaa...

> How does the quality of HAMS on VHF compare to say 80 meters?
> Everywhere in the country I've been VHF is full of well behaved
> polite respectable people.

You don't get to Rhode Island or South-Central LA much, huh?

> So no-code did not reduce VHF to CB standards as you old-timers
> were ringer your hands worrying about.

You forgot the "In my very inexperienced opinion" at the beginning
of your sentence.

> With stringent
> written tests

History has demonstrated that over time licensing requirements
are relaxed as more and more people want a hand-out from the
government.

> and no-code HF lisense, I'm sure the quality
> of VHF will be mirrored in no-code HF HAMS.

Oh, that's just >Wonderful<. Just yesterday I heard this bimbo on
the local 2 meter good-buddy box:

Bimbo (to friend): "I dunno, my raid-dee-oh seems to get really hot"
Friend: "Did you check the SWR on the antenna"
Bimbo: "Come on, you know I don't know anything about that kind of stuff".

Such a wonderful pool of trained radio operators the no-clue license
has given us.

His DRIVEL has reached an all time low! AIDS affects and aflicts many
people...staight, gay, male, female...it doesnt matter who or WHAT you
are! I know 2 people who contracted AIDS from blood transfusions...
would drew now say that that "causes" AIDS? I will agree that AIDS is
prominet in the male gay community...but for someone to say that gays
"cause' AIDS, is not only ignorant beyond imagine and innappropriate...
but also in the wrong group for discussion on the matter.

I know that drew will recieve a lot of flames because of this, but if we
all get together and ignore him, he WILL go away. (notice his frequency
of posts of late?)

Happy holidays to all.

More than enough, than you. Your "fact" may be true in North Carolina.
But anyone who understands that the world is somewhat larger even than
Mecklenburg County will know very differently from such nonsense.

4152. AM/Military Radio/AWA Hams On The Internet

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-23 00:00:00 UTC
From: "Christopher A. Bowne" <radiobwn@q.continuum.net>
Message-ID: <4bh60e$n7s@news.continuum.net>
Source record: 233405

Just wondering who of us are out here in cyberspace as well as on 75 and 160 meters? Please let me know of any Web Sites or news groups on the following subjects:

AM operation, military radio collecting and restoration, vintage and antique radio collecting and restoration.

See you all on the AMI 160 Meter Event on December 26th! Hope Santa leaves lots of heavy gray, green, and/or black boxes under the tree!

73,

Chris, AJ1G
Stonington, CT

You can get form 610V directly from the FCC's ftp sight, ftp.fcc.gov
Sorry I don't remember the exact directory, but look for something to
do with forms. It's in JPEG format, so if you don't have a JPEG
viewer, they've got one in the same directory you can also download.

I sure hope this works - I'm a newsgroup newbie and this is my first
time responding to a message.

Can anyone tell me how to print BLANK QSL's on a Laser Printer?

I have a box of continuous-form 3X5" cards intended to be tractor-fed on dot-matrix printers. I have worked up some nifty QSL designs, but am too cheap to have them printed. I'd like to use the continuous-form cards if possible. VP2VBL.

Craig Stimson (cstimson@hookup.net) wrote:

(Text omitted, but it contains the Hyman/Almy/Murray story about the origin of the word ham.)

The story is FALSE. John Huntoon, W1RW, once General Manager of the ARRL, researched this story after in first appeared back in 1947. Among the problems with the story, Senator Walsh was never a member of the committee hearing the wireless bill, and in fact he wasn't even a senator until 1922. Huntoon obtained transcripts of the Congressional Record covering the period in question, and the episode is not there. Huntoon contacted the president of the Harvard Radio Club, and the president stated that he had never heard of the incident or of the three individuals who were purportedly members of the club in the early days.

This story keeps coming up. Huntoon, for many years, kept trying to push it back, but it has a life of its own.

Dear Drew,

We had our local boy scout and cup scout troop over last night for
their Christmas party and they had a message for you that I thought
was not really acceptable considering it's Christmas and all...They
just completed code courses and out of 11 of them, 9 have their
novices and 2 have their generals and operate CW on 40 and 80 with
boatanchors and homebrews..The generals enjoy both a mix of CW
and SSB. These kids say that you are clueless..They feel that CW is
the most basic form of communication that can be used in the
worst case situation..whether it be with flashlights, mirrors, or
banging on tree trunks...The kids feel that CW is a symbolic entry
into the world of advanced communication...anybody with a ham
ticket should be able to build a simple oscillator and key it with a
couple wires..

Because it is Christmas, all "I" can say to you is, "Merry Christmas"

Steve, WA2NHZ

The following is a QST

The FCC orders two dozen retests in New Jersey, hams in Northern
California face a two day storm and the latest on Southern California
2 meter politics. All this and more on Newsline report number 958 for
Christmas week 1995 coming your way right now!

(*****
NEW JERSEY LICENSE PROBE

Is another California-like licensing scandal developing on the east

coast? The FCC is silent on the issue but it does appear as if they have discovered some testing irregularities in Northern New Jersey. According to information obtained by Newsline, the commission has sent retest demand notices to about two dozen New Jersey hams. The notices tell these radio amateurs that they must stand for retesting by early February. They also reportedly say that if the person notified refuse to take a retest or fails it, that he or she will have his or licenses downgraded to whatever it was before the test sessions currently under FCC scrutiny. For those with entry level tickets, this means being ousted from ham radio if they decide not to appear or if they fail the exam.
According to on air comments in the area, the first letters arrived

over the weekend of December 9th, catching those notified by surprise. The problems seem to center around amateurs tested in the Plainfeild, NJ area since September of 1994. As is usually the case, the FCC has not yet released the identities of those ordered to be retested. Nor has it even given any information indicating which V.E.C. or what Volunteer Examination Team might be involved.

(*****
NORCAL STORM

Ham radio operators responded to the onslaught of a two day storm that pummeled Northern California with hurricane-force winds and torrential rain. The storm that hit on Monday, December 11th and continued through Tuesday the 12th was responsible for at least three deaths. It also felled trees, destroyed several structures and knocked out power to hundreds of thousands northern California residents.
During the height of the storm more than 600,000 homes and businesses were without power. This put many AC mains powered ham stations off the air at a time when some were activated to assist emergency services. In more than one instance this meant abandoning the high frequency bands emergency nets in favor of battery powered 2 meter mobiles, hand helds and packet stations.
News reports say that wind gusts in excess of 100 mph were recorded

in the San Francisco Bay area and on several Sierra Nevada mountaintops. This combined with twenty-one inches of rain spelled disaster for many hams who relied on wire type antennas. Many of them were simply blown away by the ferocity of the storm. Even a 205 foot commercial radio tower that had stood for many years atop Mount San Bruno south of San Francisco was knocked over by the gale force winds.

Even under these conditions hams continued to provide a variety of services. Some were used to alert emergency planners of flooding conditions. Others worked on alerting the citizenry of highway and school closures throughout the northern part of the state. The total number of hams who volunteered their time and their stations in the wake of this emergency was substantial, but the exact total may never be known.
Ironically, the storm hit the area less than 48 hours after the

Oakland Amateur Radio Emergency Service and Oakland Radio Amateur Civil Emergency service had scheduled to a special recruitment meeting. Oakland is a San Francisco suburb. It wants to sign up more of the areas Amateur Radio operators to become emergency communications volunteers. Among their varied tasks, Oakland ARES and RACES communications personnel support the American Red Cross, conducts fire patrols, and otherwise provides emergency communications during times of disaster, including storm related communications emergencies such as this.

(*****
TMRCC

Will the new Two Meter Repeater Coordinating Committee of Southern California be the replacement for the almost two decade old Two Meter Area Spectrum Management Association or is TMRCC simply another mouse that roars? If you judge only by the small turnout at the first open TMRCC general meeting, you would say that TASMA has little to worry about. But numbers can be very deceiving.
Only thirty-two people who showed up at the Los Angeles County Sheriff's communications center for the December 9th meeting. The big difference was that almost every one of them was a repeater owner operator. Bill Arens, N6NMC who owns the W6MEP repeater was there because he says that the old coordinator no longer serves the needs of repeater owners:

"We've been a supporter of TASMA and this gentleman, Art was one of the founding members of TASMA. It was put together by repeater owners in order to avoid the conflicts with the benefit of ham radio at large. I sincerely believe that the people who have been with TASMA. In fact, can I see a show of hands how many people who have been in some capacity with TASMA in the past. When I see the show of hands this pretty well exemplifies, the people that are here are, who have done this before. Are trying to say, You know, we've got a problem and unfortunately we can't get TASMA. I really sad to say, it sounds like it is broken beyond repair." N6NMC

The biggest complaint being aired against TASMA is that it has fallen into the hands of repeater users. Repeater owners say that users are transitory. They are on one repeater today and another tomorrow. That they have no real commitment to any repeater and cannot possibly understand the problems of operating a repeater. But even if TASMA is broken beyond repair as Bill Arens says, there

is no guarantee that TMRCC will be able to provide repeater owners with a fix. Its interim chairman Steve Jensen, W6RHM, is among those who freely admits it:

"In order for this group to be in a position to make recommendations,
for frequency coordination or anything else relative to that. We are going to have to solicit or elicit a showing of support from the

repeater owners and operators in this area. Which by our last count, is somewhere between 300 and 400 repeaters. We are not exactly sure, but it is a large number for repeaters. As I stand here talking to you today, we do not have a majority of representatives. A lot of people have written me letters, which if you are interested in, I would be happy to share some of them. But we stand at somewhere in the 60 to 80 area. So, we are shy of being a majority, being able to stand here legitimately and say we represent a majority." W6RHM

To date there has been no official comment from TASMA concerning the
challenge from TMRCC.
TMRCC bylaws limit voting to repeater system owners only. Repeater

users can join the new organization but only as non-voting Associates.

JIM CAIN LEAVES ARRL

QST Magazine Senior Editor Jim Cain, K1TN, perhaps better known as the editor of the ARRL Letter is leaving League service effective January the 1st. Jim learned on December 1st, that his position had been eliminated.
In a letter to his many friends and associates, Cain noted that he had worked with many of them on articles and projects over the years, and that to him, helping others get published is the most rewarding work around.
Cain says that he feels very fortunate that he has been able to do so
much of it, for nearly all of his working life. He says that he hopes to be able to continue to do so once a new place of employment is found.

(*****
COAST GUARD NET

N6LQ reports via packet that the U.S. Coast Guard Net is finally a reality. The purpose of this weekly net is on-the-air meeting for anyone with interest or ties to the U.S. Coast Guard. The frequency is 14.300 MHZ, Saturday 18:00 GMT. If you don't have HF capabilities send your comment or request via packet or to N6LQ at his call book address.

(*****
ARRL ANTENNA WORKSHOP

You can improve your antenna system by signing up for the ARRL sponsored Computer Aided Antenna Design workshop slated for the Miami Airport Marriott on Friday, February 2nd. This, in conjunction with the Miami Tropical Hamboree.
The five hour session will be conducted by ARRL Senior Assistant Technical Editor Dean Straw, N6BV. There is a fee to attend. To get details, call Educational Activities Department Manager Rosalie White,

WA1STO, at (860) 594-0237.
Space is limited, so please call before January 24th.

(*****
ARRL PHONES

If you have trouble getting through on the telephone to ARRL HQ with the new 860 area code, tell your local phone company. A few callers have experienced difficulty. The old 203 area code still works, too.

(*****
Rochester Hamfest Web Site

Harold Smith, K2HC, reports that The Rochester Hamfest now has a site
on the World Wide Web. Its address is very long but you can get it by sending e-mail to rochfst@vivanet.com.
Harold, who is the general chairman of the Rochester Hamfest says that their web page contains an expanded version of the show brochure.

(*****
FRANK JONES - W6AJF, SK

The changing of the guard in ham radio continues with word that author and inventor Frank C. Jones, W6AJF, died November 5th, 1995, in Sonoma, California.
Jones wrote a number of books for amateurs published by the Pacific

Radio Publishing Company. According to the Sonoma Index Tribune, he is also credited with designing and building the first ac and dc powered radio.
Jones was 91. Among his survivors is his wife of 70 years.

(*****
PHILIP RAND - W1DBM, SK

And Philip S. Rand, W1DBM, died on November 27th, at age 89. Rand was an electronics engineer at Remington Rand Corporation in the late 1940's when the Amateur Radio service faced its very first TVI crisis. This in the form of interference to early VHF television sets that used an intermediate frequency at 21 MHZ. Rand worked with the American Radio Relay League to develop TVI suppression techniques for channels 2 through 6. This made it possible for George Grammar, W1DF to design a high pass filter for these rather primitive tv sets. Rand then turned his attention to developing new methods of shielding Amateur Radio transmitters to further minimize TVI.
Later on in his career, Philip Rand was elected Director of the ARRL
New England Division. Last year he was bestowed the Presidents Award by the Quarter Century Wireless Association.

(*****
NEW SATELLITE COORDINATOR

Australia's Graham Ratcliff, VK5AGR has been appointed as the new IARU AMSAT Frequency Coordinator. Ratcliff was selected from a number of nominations made by international AMSAT Groups. He was selected based on his long association with the Amateur Satellite program and his excellent performance as a ground command station controller for AMSAT OSCAR 13. Ratcliff's appointment was announced by Hans van de Groenendaal, ZS5AKV who is the IARU Satellite Advisor.

(*****
The VHF/UHF DX Book is Back

From the United Kingdom comes word that the Radio Society of Great Britain's VHF / UHF DX Book is back. The second printing includes some minor typographical revisions and an includes an updated version of G4DDK's Suffolk 2 meter transverter.
The RSGB says that it will be handling all of the distribution and to expect delays of some months before the book is available from national distributors such as ARRL in the United States. For more information please contact RSGB, Lambda House, Cranborne Road, Potters Bar EN6 3JE, England.

(*****
U.K. SURVEY

Also from the U.K., the RSGB's Licensing Advisory Committee says that
it will be supervising a survey of all radio amateurs in Great Britain. This says the committed is to ascertain their views on the qualifications and licensing structure necessary for the United Kingdom Amateur Service. The survey will also be open to British shortwave listeners and other interested parties, and will not be confined to RSGB members.

DX

In DX, Martti Laine, OH2BH, reports in The DX News Sheet that negotiations for North Korean operations as P51BH and P51XX operations are well underway. A formal announcement is expected shortly.
And, DL8YHR, plans to be active from Tunisia from March 1st to the 10th from 3V8BB. Frank plans to operate the AO-10 and 13 satellites, as well as 144 MHZ EME. The EME set up will run 600 watts to four 17 element Yagis.
And reports are circulating that LZ1WR, plans on operating from Libya 5A1A sometime in March. He hopes to augment low band antennas with monobanders for the higher bands.
Lastly, 5V7MD has returned to Togo. Dave operates mostly SSB and a

bit of CW. Try 14.165 MHZ daily at 21:30 UTC. QSL with an SASE via AB7BB, direct.

(*****
ZL1PAM

And finally, talk about vanity callsigns. Newslines Jim Meachen, ZL2BHF reports from down under that the New Zealand young amateur of the year Pamela Blackett, ZL1WPB, who you recently heard about in a Newsline story, has now passed her CW test. As a result, Pamela also has a new callsign. Are you ready? Pamela's new call is ZL1PAM. Not bad huh.

WPx, NPx, KPx are reserved for Atlantic (Carribean) off-shore areas.
AL7, KL7, NL7, WL7 are reserved for Alaska.
AHx, KHx, NHx, WHx are reserved for Pacific off-shore areas.
KG4 is reserved for Guantanamo Bay.
KC4 (2x3 format) calls are reserved for the Antarctic.
KC6 (2x2 format) calls *may* still be reserved for the Republic of Belau (I
don't remember if they have been assigned a prefix block from the ITU but
for some time they continued to use the former American calls).

)Any RTTY operations on 10 meters? I used to have an old Model 15 and loved to
)run RTTY way long ago.

Plenty of RTTY on the bands. Not much on 10 meters. For the most part, 10 meters is not open. Try 20 meters, between 14.080 and 14.090 most evenings and you'll hear activity. Try the first full weekend in January and you'll hear a LOT of RTTY, maybe even on 10 meters, from the ARRL RTTY Roundup contest.

)
)I recently got the RTTY bug again, and am unable to hear any RTTY on 10.
)Packet, yes, RTTY no.

The common hangout is on 20 meters, except for contest times.

)
)Anyone know of any RTTY nets on 10?

Not aware of any on 10. There are a few on 40 meters.

I just purchased an MFJ-1270C TNC. It has HF weather FAX
capability, but the user manual says virtually nothing about how
to use this feature. Does anybody know how to command the unit
for WEFAX reception and the tuning offset to use with my HF
receiver?

Title pretty much says it all. Need a schematic for a DTMF decoder using the SSI202P chip (I picked up three of the chips at a swap meet for a buck each, they were still sealed in their Rat Shack packaging).

I need a unit that is handheld, uses an LCD screen, and is not connected to a computer.

Thanks!!

Yes, NIST is in the Peoples Republic of Boulder and maintains the clock. However, the WWV transmitter site is north of Fort Collins, Colorad0 - roughly 50 miles n-n-e of Boulder.

And, by the way, Fort Collins is developing somewhat similar "peoples republic" characteristics by corruption from Boulder.

I'm in Berthoud, Colorado - roughly 1/2 way in between - where we refuse to accept the peoples republic influence of either Fort Collins or Boulder ;)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 DECEMBER AND FORECAST FOR 25 DECEMBER - 27 DECEMBER
MERRY CHRISTMAS
Note: Services will be provided at normal weekend levels until
27 December.

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 23 Dec
Daily Proton Fluence >1 MeV: 3.7E+04
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.6E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Dec 26 Dec 27 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Dec: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Minor storm with sudden commencement
at 06UT and continuing until 15UT, unsettled conditions have followed.

Estimated Indices : A K Observed A Index 23 Dec
Learmonth 28 3455 5333
Fredericksburg 18 8
Planetary 21 7

Observed Kp for 23 Dec: 3212 2221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
25 Dec 14 unsettled
26 Dec 12 unsettled
27 Dec 10 unsettled

COMMENT: The recurrent disturbace started when expected but with
higher initial levels.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Dec Normal Normal Fair-Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Dec Normal Normal Fair
26 Dec Normal Normal Fair
27 Dec Normal Normal Fair
COMMENT: Slightly degraded conditions expected for high latitudes due
to tail of the recurrent geomagnetic disturbance which started
on 24 December.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
24 Dec 8

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values.
Townsville: Near predicted monthly values until 15UT then 30%
depressed.
Sydney: Near predicted monthly values to 15% depressed with sporadic
E 0-7UT, 19-23UT.
Hobart: 15% depressed with spread F 12-18UT and sproadic E 18-23UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
25 Dec -5 Near predicted monthly values to 10% depressed
with sporadic E.
26 Dec 5 near predicted monthly values
27 Dec 5 near predicted monthly values

COMMENT: Degraded conditions are possible for high latitudes due
to the recurrent geomagnetic disturbance.

>>Any enlightenment on the issue would be appreciated.

Using your example - it's more like refusing to talk to someone who is, in your opinion, has a foul mouth on the repeater. THERE IS NO LAW THAT SAYS YOU MUST RESPOND TO EACH CALLER ON THE REPEATER IS THERE?

Sorry - you can not manufacture any legal wrongdoing here whatsoever. It does go against the spirit of ham radio though - but it is simply their choice.

FYI -

Sounds like the person reporting this less than pleasant
experience with Austin Amateur Radio was in the minority
of customers doing business with this dealer.Most of these
ham stores employ individuals who are paid
near minimum wages with little or no fringes. As a result,
you may encounter a salesperson who doesn't give a "da_n" because they know
they're just putting in time until something better comes along.
If I received this type of "arrogant, surly" treatment I
would definitely notify the manager who may not be aware
this individual is treating customers this way.If enough
people complain, chances are he won't be there next time
you frequent this store. There are
too many chain ham stores who will gladly take your money
and give you excellent service. Its a buyer's market and
you deserve to be treated with the same respect you would
get as a customer in any other business.

My 2c, from someone who's bought a lot of gear over the
years,
Bob Needleman, KD4ZN

You can lookup a callsign and it has provisions for hams to add their
e-mail address to the CALL SERVER....
While you are there you can add your e-mail address...
Or look up a call and see if that license holder added there E-Mail address
I just entered mine 4 minutes ago

Dear Mama's Boy,

Again and again your overwhelming ignorance shines through...
These kids are all advanced students..three of them are in a
gifted program and can run circles around you even on one
of your rare good days..eight of them took intermediate computer
courses this past summer at the local college..

I read some of your comments on another thread about HIV/AIDS..
you are one ignorant ass hole..I have no tolerance for homosexuals,
but AIDS/HIV is way beyond that now..I guess you can't be taken
seriously..I now feel that it's great that Morse Code can be a filter
to keep a fool like you off of HF..See you later loser...

Oh yes.."Merry Christmas" ..

Steve, WA2NHZ

Hello Guys,
I have a AEA pk-12 tnc and would like to use it in windows...

I have download a few programs which are windows base and none
of them could speak to the tnc.. Can someone recommend a good
shareware/freeware program I could download either on aol or via ftp..

Thanks...

Please write back to me via email, since I WILL get lost on the newsgroups
:).

Thanks again,

>I now feel that it's great that Morse Code can be a filter
>to keep a fool like you off of HF.

I think you better learn how to access a callsign server. I passed my code; I have access to HF. A common (mis) assumption by you no-coder types who (mistakenly) believe that you own the bands is that all those who are opposed to mandatory CW requirements are no-code techs who "are just too lazy to learn the code." Wrong

>See you later loser...

Much later, I hope. And only when you get your facts straight.

-Drew in Charlotte-
KF4DDM

PS...If you want to see first-hand how effective of a filter Morse Code is "to keep (fools) off of HF", try 75-meters on any given night.

Again, if you could only learn how to read a callsign server, you would know the answer to your question. But what difference does it make? None, unless you're one of those types who believes that the worth of an amateur radio operator is determined primarily by the length of time that he has been licensed. Most of these folks are also adamant pro-coders who (mistakenly) believe that the amateur bands belong to them.

Ham radio is not a priivate little "club" for you and your friends. Ham radio is a hobby, open and available to all who can (and do) pass the tests and receive their licenses. This is by virtue of the fact that the amateur radio service utilizes publicly-owned radio frequencies. There are quite a few of you who are still bellyaching about the no-code license, commenting to each other about what a "mistake" it was. Too bad. You don't own the bands and you don't make the rules. Ditto for no-code HF access. At some time in the future, the raw numbers of those requesting access will become politically-sufficient to allow the rules to be changed. The question is not "if" but, rather, "when." When it happens, there's nothing you or your friends will be able to do about it.

When buying New/Used equip from Frank be sure you
perform an operational check on the equip. Be sure
and verify that ALL of the options that he says are
"installed" are actually in the equip in question.

I bought a Icom V68 HT in which he told me the CTCSS
tone board was installed. I took his word as a fellow
ham. To my dismay, I later discovered that NO CTCSS was
installed!!!

When I contacted Frank he was very rude and told me that I
should have known better and that CTCSS was an option, not
standard. I knew that it was an option and specifically
asked if it was installed as the radio was useless to me
without the option. He told me it was installed!!!

Franks told me that If I wanted any refund that would have
meet him in Burnaby BC, a 6hr drive from my location. Not much
of a solution, eh?

So,take this into consideration if you are thinking about making
a purchase from Frank.

Drew, believe it or not, there actually is a real-world place for all of those
modes of communication. I'm a leader in a Boy Scout troop, and we are
teaching a number of "antiquated technologies" to the boys, including both
morse and semaphore (not smoke signals though, not yet) as part of their
communications requirements. And, believe it or not, it was NOT my idea
to do that...it came from some non-ham scout leaders, a couple of whom
make their livings programming computers! Your modern technology will
not do you a lot of good when you're in the wilderness somewhere, out
of range of a cell-phone tower or with a dead battery because you fell out
of your canoe into the water and it got wet. Whether to require people to
learn older methods as requirements for a license (or Scout rank advance-
ment) is a separate issue, that really isn't being addressed in this thread
anymore, but I don't think you should run people down because they choose
to spend some of their time learning modes you think are obsolete.

You are truly an ass!..The callsign server only lists the dates of
the last change to a license and the expiration not necessarily
when that person upgraded...yes I read a post of your claiming to
have worked all this DX..and the flame you got about being a
big "know-it-all" and after only being licensed for 3 months!!!
Ha Ha Ha Ha!.....No you don't have HF access..you hate code
remember? So you might as well have no access...Three months?
Here I thought maybe you have been licensed for a few years!!
Ha Ha Ha! Now I have even less respect for you than I did before,
and that's difficult, because I didn't have any respect for you in the
first place..Little wannabe "ham radio infant"..Ha Ha Ha!..3 months
and he knows all there is to know! Well I guess I have to look at
your stupidity in a different light now..I pretty much have you
figured out now..."a chronic loser, a whiner, a malcontent, a mere
spoiled pouting brat that has to have it his way..one that believes
the only rules are his rules and crap on everyone else." Well
mama's boy forget it...3MONTHS AND HE'S AN EXPERT!!!!
HA HA HA HA HA HA HA HA HA HA HA HA HA HA HA HA!!!!!!!!!!!!!

Have a Merry Christmas

Steve, WA2NHZ
.
ps I have been using call servers for several years....my own CD's
plus packet bbs servers...So tell me about it "pupa boy". I'll match
my digital knowledge and experience against you any second of the
day...

Hi Alan,
Nice to meet another Scout leader. It's really a waste of time trying
to have a rational discussion with Drew...He has proven it time and
time again no matter what the subject .He is just a lazy, self
centered lout that takes pride in tearing down wholesome institutions.
Give him time and he'd even want to destroy scouting..Gone would
be the campouts--unnecessary because more practical to have
the scouts lease a condo....forget first-aid---911 is easier--don't
wear a uniform--leisure suits are in...cookouts--no way..room
service..He would change Webelos scouts from being curious,
interested, enthusiastic, and active to why bother, who cares,
I can't, I need my nap now..

Merry Christmas to you and
your scouts from Cub Scout Pack 515

and Girl Scout Troop 862

Steve, WA2NHZ

1. This is in no way a great hobby (maybe before 1960 but no more).
2. I am the loser? I am not the ass calling CQ Contest and passing totally
useless traffic and having carbon copy contacts by the thousands.
3. In this hobby I am indeed twisted.
4. The worst insult anyone can call me is a "typical ham."

Merry Christmas to you too Chris..

Yes I agree...mail I have received from others also reflects this.
He in no way resembles other hams on their upward direction
in the hobby/service..Upgrading as one's interest grows can be
fun..no one has to rush..It's a life-long interest, but he tends to
cover it with a dark pessimistic cloud that can corrode a new
amateur's morale.

73's

SB DX @ ALLBBS $OPDX.235
Ohio/Penn DX Bulletin No. 235

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 235
BID: $OPDX.235
December 25, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KC4ELO, K5FUV & DXCC DESK, W4RIM, WA8MEM & CBARC, WE9V, 9M2TO, DF4RD, F6AJA, PT2BW, TG9IKE, VK2SG RTTY Notes, G4BUE & DX NEWS SHEET and DL9GOA & DXNL the following DX information.

5R, MADAGASCAR. Gerard, F2JD, will be returning to France before heading to 5R-land. He just finished up his S79JD operation where he logged 2200 QSOs. With his planned trip to Madagascar still on, Gerard will be leaving France on January 11th. He plans to stay in 5R-land for at least 6 months. He will try to be active on all bands, including the WARCs.

9K2, KUWAIT. Derek, KC4ELO, reports that Tom, 9K2ZC, and his wife Donna, 9K2YY, will be leaving Kuwait sometime in March of 1996. Donna, 9K2YY, is still the only licensed YL in Kuwait, so she would be a nice catch if you collect YLs. They both can be found on 20 meters SSB (14195-14220 +/- kHz) usally about 1500-16:00z during this time of year. KC4ELO who is their QSL Manager states he will start doing bureau cards when they are out of Kuwait. He plans to keep their logs open until the end of 1996. QSL via KC4ELO, Raymond H. McClure, 674 Crestlyn Drive, North Augusta, S.C. 29841

9M2, PENANG ISLAND (WEST MALAYSIA). Tex, 9M2TO, is currently active from IOTA AS-015 located in the Pinang State Group. Tex reported to OPDX that he will be looking for stateside stations on 17, 30, 40 and 80 meters (no times given). QSL to direct to:
Tex Izumo, Bukit Dumbar Apt. 9-4, 97 Jalan Thomas 11700, Gelugor, Penang, Malaysia or via the bureau to his home call JA0DMV thru JARL.

D6, COMOROS. The DXNS report that Michel, FR5HG, is on an assignment here and is waiting for a D68 callsign. Also, remember to start looking for Akio, JA3JM, as D68AS between December 26th and January 1st (details in OPDX.234).

H4, SOLOMON ISLAND. Bernhard, DL2GAC, will be active from here (After his India operation. See VU) in February as H44MS and also be an entry in the CQWW SSB 160 Meter Contest. He plans to be active mainly on 80 and 40 meters operating SSB and Pactor (NO CW). While in H44-land he will try to activate a new IOTA from Sikaiana Island (if transportation can be arranged. QSL via CBA.

HK0, SANTA CATALINA ISLAND. Wolfgang, DF4UW, plans to be active from this small island near Providencia (NA-049) from January 9-24th. The call will be HK0/DF4UW. QSL via homecall.

KH2, GUAM. Garth Hamilton (DXAC Chairman), VE3HO, will be here from January 5th to the 12th of January, 1996. He will be there mainly on business, but would like to meet with some of the hams there and maybe do some operating on the weekend or evenings. If you can help, Garth can be contacted via his InterNet: garthh@cdx.net

NEED QSL MANAGER. Scott Neader, KA9FOX, is looking for a QSL Manager. The manager would be responsible for answering the backlog of PJ8Z, PJ7/KA9FOX, KP4/KA9FOX, TG/KA9FOX, and TG0AA (ARRL DX SSB 1995 only) QSL requests, plus his upcoming planned TG operations in 1996 for CQWW 160 SSB and ARRL DX SSB contests. All of the logs are available on computer disk and Scott would pay all expenses not covered by donations. If you would be willing to help Scott, please send him an e-mail at his new E-mail address: neader@centuryinter.net

TG, GUATEMALA. Manfred, TG9IKE, reports that David, K4TT, will be active as TG9IDK from the 1st of January up to the 10th. He will work all bands from 10 to 40 meters, mostly CW, 5 up from the edge of the band, as propagation allows. QSLs go to K4TT CBA.

VU, INDIA. Bernhard, DL2GAC, will be active as VU2BMS during the month of January. Activity will be mainly on 80 and 40 meters operating SSB and Pactor (NO CW). QSL via CBA.

ZF, CAYMAN ISLANDS. Al, W4RIM, will be operating as ZF2ON from Grand Cayman Island between December 26 and January 1st. QSL via KN4F. He plans to operate mostly CW on 80, 40, 30 and 20 meters at the low end of band. Al reports this will be a family trip, so he will be operating casually.

ZL8, KERMADEC ISLAND (UPDATE). The VK2SG RTTY Notes report Ron, ZL1AMO, that he will NOT be going along with the group of ZLs going to ZL8 in May. They also report that Ken, ZL2HU is in charge of this operation.

ZW6, COROA VERMELHA ISLAND (Brazil, IOTA SA-062, DIB-32). Stuckert/PT2GTI, Paul/PT2NP and Lunkes/PT2HF will operate as ZW6C (on SSB) and ZX6C (on CW), from January 8 to 12th, concentrating on IOTA frequencies, 80-10 meter bands (including the WARC bands). QSL to Roberto Stuckert, PT2GTI, P.O. Box 09647, 70001-970 Brasilia, DF, Brazil.

1996 BICENTENNIAL SPECIAL EVENT CERTIFICATE AND STATIONS. The Cleveland Bicentennial Amateur Radio Committee (CBARC) is sponsoring special event stations in the Greater Cleveland, Ohio, areas which will celebrate

Cleveland's bicentennial throughout all of 1996. The CBARC plans to activate special event stations from various sites around Cleveland during 1996. These sites will be announced at a later date. The CBARC is also sponsoring special award certificates for contacting Greater Cleveland Stations signing the /200 on all bands, CW, SSB and the digital modes (on HF) in and during 1996. No repeater contacts permitted and calls on different bands count as new stations. Award Levels are:
North America - two-way contacts with 10, 20, or 50 stations
Europe, Asia,
Oceania, Africa - 5, 10, or 25 stations.
Submissions must include a "GCR List" and 4 dollars (U.S. currency only, NO IRCs). QSL via WA8MEM.

DXAC & DXCC NEWS..... The ARRL DX Advisory Committee (DXAC) has voted 12 to 4, and the Awards Committee, has voted unanimously to add Pratas Island, BV9P, for contacts made 1 January 1994 and after. This is based on DXCC Rules Section II, Point 2(a) (Separation by Water). Pratas Island, located in the South China Sea is administered by Taiwan. QSL cards will be received by the DXCC Desk starting April 1, 1996. Cards received before that date will be returned without action. Because of QSLing irregularities, it will be necessary for anyone who has a picture card from the January or March 1994 operation to obtain a replacement card from QSL manager KU9C. (The picture cards are not acceptable for DXCC credit.).....
The ARRL Membership Services Committee (MSC, a standing committee of the Board of Directors), having reviewed documentation from the DX Advisory Committee (DXAC) and the Awards Committee, has voted 5 to 2 to recommend the addition of Scarborough Reef to the ARRL DXCC Countries List. The DXAC and the Awards Committee had come to opposite conclusions regarding the eligibility of Scarborough Reef for separate DXCC status. Under new procedures adopted by the ARRL Board in July, 1995, when these committees do not agree the question is referred to the MSC for review and recommendation to the full Board. The recommendation that Scarborough Reef be added to the DXCC List will be considered by the ARRL Board of Directors at its January meeting.....

HAPPY HOLIDAY AND SEASONS GREETINGS from your editor and his family. We would also like to give a special thanks to all who have contributed DX information over the past year. Without them there would not be an OPDX Bulletin to read every week. GOOD LUCK in the New Year de Tedd KB8NW....

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses:
kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every

second will not have to do this step.) 3) The phone will pick up and
after the "BEEP" leave your voice message or FAX.

actually Drew, you exact statement verbatim..." I have worked many
countries with 5 watts "
so again..how??? 10 meters is as dead as the proverbial doornail. did
you use CW?? did you illegally go outside your license class and get on
20M??? 40M??? 80M??? SSB

this is not 3rd party hearsay, it was included in one of your asinine post
concerning how the bands must be dead of CW, cause you never hear anyone
that you know using CW in your local area.

I am sure if push came to shove, someone has the exact post. I only keep
snippets of the more interesting spew that goes on here. makes for great
articles in the local club newsletter.. which, you by the way are a great
contributor, would you like to be on the mailing list in the future???

>20M??? 40M??? 80M??? SSB

None of the above. 11-meters, during the last sunspot cycle peak of 1989-91. And the statement is true...Australia, Japan, Belgium, England, Ireland, Spain, Alaska, Hawaii, several South American countries, etc., etc. Did I ever say I "talked around the world?" NO! Did I ever mention ANYTHING about DXCC? NO! Did I ever say it was on 10-meters? NO! Did I ever say it was within the last few months? NO! Did I even say it was on a HAM BAND? NO! Just more of your (*wrong*) assumptions!

So, I stand by the staement "I have worked many countries with 5 watts." With the right propagation and an open frequency, you CAN talk around the world on 5 watts. Gee, you almighty, upper-class, pro-code, been-a-ham for 30, 40, 50-years types should at least know that much.

Drew Durigan <VUBS79A@prodigy.com> wrote:

>Again, if you could only learn how to read a callsign server, you would
>know the answer to your question.

Callsign servers are relatively useless to find out how long a person
has been licensed. None of them show an "original" license date, they
only show current license issued date and expiration date. For instance,
an extra licensed 15 years ago will only show up as an "extra" with a
current and expiration date, and maybe a "previous call" and "previous"
class entry that shows they once held a lower-class call, but certainly
nothing about original license date.

Then again, if you had a clue, you'd know that.

All this shows is that we need to go back to the "minimum 1 minute
solid copy" rule, and get away from these multiple-guess giveaway
code examinations.

: >smoke signals, too?

First, my background...I've been a ham 30+ years, also a Scoutmaster for
2 years plus continued responsibilities during the entire time my son went
through scouting from Cub Scouts to Eagle. I'm also an advocate of
reducing the CW requirements.

: Drew, believe it or not, there actually is a real-world place for all of those
: modes of communication. I'm a leader in a Boy Scout troop, and we are
: teaching a number of "antiquated technologies" to the boys, including both
: morse and semaphore (not smoke signals though, not yet) as part of their
: communications requirements. And, believe it or not, it was NOT my idea
: to do that...it came from some non-ham scout leaders, a couple of whom
: make their livings programming computers! Your modern technology will
: not do you a lot of good when you're in the wilderness somewhere, out
: of range of a cell-phone tower or with a dead battery because you fell out
: of your canoe into the water and it got wet. Whether to require people to
: learn older methods as requirements for a license (or Scout rank advance-
: ment) is a separate issue, that really isn't being addressed in this thread
: anymore, but I don't think you should run people down because they choose
: to spend some of their time learning modes you think are obsolete.

Absoluely true AND the essence of what many of us have been stating. The
NEED to know morse code has diminished almost totally in value except for
very rare instances. Based on such infrequent and highly improbable
occurances today, there is simply no reason to FORCE everyone that wants
to get on HF to learn CW at speeds of 13 wpm. The 5wpm or lower
international treaty requirements are all that needs to be addressed.

I am going to put together a set of Frequently Asked Questions/Issues
on this entire CW debate, but one thing I need for starters is an
identification of the last times CW played an active role in a true
emergency...and the use of the CW involved amateurs in the USA. To
my knowledge it has been several years at least, but I'm open to
being corrected on that.

Merry Christmas

: if it was from the cockpit of a B52..

More so what, does it help the arguments if I note my 4 years of
Naval communications/radar background (E-5), also with Vietnam War
Zone experience?

Address the issues! End the personal crap! Debate the NEED for
continued testing above 5wpm as a pre-requisite for the majority
of HF access.

As before, I have no problem establishing a fast-CW exclusive set of HF
sub-bands to make all the pro-code people happy. Funny it isn't
taken up as an opportunity to have their own CW EXCLUSIVE (and I mean
exclusive, no data, no RTTY, etc.) high speed CW playground...or is

keeping everyone else out of the rest of HF their primary goal?
Just thought I'd ask.

Message-ID: <199512251703.TAA03767@bgumail.bgu.ac.il>
Source record: 233355

Motorola makes some nice mobile mics marked "HMN3596A" (black plastic case, three screws in the back and with the metal attachment button). I picked up a few in the usual place.

Does anyone know how to connect these new style microphones to older Motorola gear such as Mocom series transceivers? The mic connectors on the Mocom series give you 12 V through a resistor which appears to be the collector resistor of the amp which is an integral part of the capsul in the "old style" mics.

The HMN3596A has 4 wires red PTT
black ground
blue ??
green ??

There must be someone out there who still plays around with radios and knows about these things -- if so please take a few minutes from philosiphizing about gay cw to reply ... thanks.

Hi, Greg, and welcome to the newsgroup. Don't believe any of what you hear and half of what you see on this group and you'll get along just fine.

I tried that ftp site as well as the www site and they both act the same on my machine -- I get about 25k of the file to download and then it hangs and aborts. I don't know if the problem is on this end or that end, but I've never been able to successfully download anything from the fcc sites and the 610V is no exception.

Has anybody successfully downloaded the 610V file from the fcc ftp or www sites?

Ask for someone with 1971 callbook and see if you are listed.
And keep going down in the year to see when you are not listed..
Some of the older callbooks had a section on NEW CALL's
But I think back in 71 you had to keep LOG books, I don't remember when
they Eliminated that requirement....

Source record: 233470

>You are truly an ass!..The callsign server only lists the dates of
>the last change to a license and the expiration not necessarily
>when that person upgraded.

That's funny. Everytime I do a lookup it gives me the name, call, date of licensing, and LICENSE CLASS! My initial grant was for a coded class of license, so that is what would be listed on whatever callsign server you choose to use. Duh! Better try again.

>yes I read a post of your claiming to have worked all this DX

Where? I never claimed to have worked "all this DX"; you're just repeating a third-hand story that you heard from someone else on this newsgroup.

>No you don't have HF access..you hate code remember? So you might as
well have no access...Three months?

What does one have to do with the other? At the present time, Morse proficiency is required in order to obtain operating privileges below 30Mhz. Besides, it's a much bigger thorn in the side of you pro-coders when someone who HAS passed a Morse test comes out in favor of eliminating the code requirements because you can't use your tired old, stereotypical line that "they don't want to work for it", "they're too lazy", etc. Maybe that's why I bother you people so much; you can't simply write me off as a "lazy no-coder" like you do with the others.

>Here I thought maybe you have been licensed for a few years!!
>Ha Ha Ha! Now I have even less respect for you than I did before,
>and that's difficult, because I didn't have any respect for you in the
>first place..Little wannabe "ham radio infant"..Ha Ha Ha!..3 months
>and he knows all there is to know!

I also have 12 years' worth of commercial-grade radio experience, including the engineering department. Do you want to compare notes, abilities, real-life experiences, even aptitudes? If you're going to judge someone's technical ability and, therefore, (in your mind) their self-worth solely by the length of time they have held their amateur radio license, you are more narrrow-minded and ignorant than I thought you were.

>I pretty much have you figured out now..."a chronic loser, a whiner, a
>malcontent, a mere spoiled pouting brat that has to have it his way..one
that >believes the only rules are his rules and crap on everyone else."
Well
>mama's boy forget it...3MONTHS AND HE'S AN EXPERT!!!!
>HA HA HA HA HA HA HA HA HA HA HA HA HA HA HA HA!!!!!!!!!!!!!

And you are sadly typical of your kind; an adamant pro-coder who believes that your way is the only way. Hey, "if I had to do it, they should have to do it too", right? The no-coders aren't "real hams." Never mind that this is 1995 and the code has long been replaced by more efficient methods of communication, or that even the military no longer uses it, or that the percentage of hams who actually use the code has been in decline for quite some time...no, you people just have to have your precious little "initiation rite" into your "private club" of amateur radio. Guess what? It ain't so! A harsh reality, but one that you need to face. The sooner, the better. Judging from the record-setting numbers of new hams coming to the hobby (of which the overwhelming majority are no-code techs and have absolutely no interest in learning an antiquated means of communication like Morse), your kind are going to get rarer and rarer on the bands. The raw numbers of those demanding no-code HF access will soon make it a politically neccessary to begin changing the rules to accomodate these folks. That's the way it is. No amount of personal attacks, name calling, or insults directed towards me is going to change what is inevitably coming our way.

From: k8zgw@hamnet.org
Message-ID: <DK48t0.5E@hamnet.org>
Source record: 233471

As quoted from <4bdlbn$dbb@news.snowcrest.net> by Michelle Nicolls
<mnicolls@snowcrest.net>:

+---------------
| Does anyone have any information on building telemetry transmitters?
| 216 mhz preferably but 2m or 70cm ok. Is telemetry tx on amateur band legal
| (licensed of course)? Will a scanner with a attenuator work as a receiver?
| Any info welcome!
| tnx, Troy KE6QMX

Troy, What are you trying to do.... if the use is amateur (or personal, not
for profit) it should be legal in the ham bands. The best shot for cheap
telemetry transmitters is TEKK; they sell them on the ham band and on the
business bands. I think they run around $150.
If I can be of farther help e-mail direct, as I don't follow this news group
very often.

Chris, would you PLEASE learn how to spell correctly?! ("staight?") It really diminishes what little credibility you have when you constantly demonstrate that you are incapable of correctly spelling simple words, correct punctuation, correct grammar, etc. Put the code key down, pick up the dictionary, and maybe you'll learn something useful for a change.

Where, Chris? Where's your proof? Since it was never said by me, you have none. If you do, then by all means accept my invitation for you to prove me wrong. Put up or shut up, in other words.

While you're at it, will you PLEASE learn how to spell! ("lieing") You have no idea how foolish this makes you look...to consistently misspell, misuse, and mispunctuate words every time you post on here.

I feel sorry for you, Chris. I really do. Poor little meathead.

It's hard to keep your little lies straight isn't it..Lots of
witnesses..
>>No you don't have HF access..you hate code remember? So you might as
>well have no access...Three months?

>I also have 12 years' worth of commercial-grade radio experience,
>including the engineering department. Do you want to compare notes,
>abilities, real-life experiences, even aptitudes?

Yeah let's compare..
I have been in electronics for most of my life..I started building
transmitters and receivers over 37 years ago..I have worked in
the 2-way radio field and the broadcast field (engineering and
repair) I worked in military ECM, PMEL, as well as being
in a flight crew..I have had a 2nd Class Radiotelegraph as
well as a 1st Class Radiotelephone class license with radar
endorsement I have gone from novice and then through the ranks
to extra taking exams in person at the FCC with real exams when you
still had to explain in essay form and draw schematics...I am now a
(since 1981) VLSI electronic engineer designing high density
propriatory Ic's and circuit integration for biomedical robotic
platforms...I still homebrew, and love playing with boatanchors..I
have a private pilots license and do aviation radio repair part time
at a local depot..(also did some at old Dow AFB when in A&E squadron).

...oh yes by the way I spent 3 years just in South East
Asia while in the USAF.(Vietnam Era) .and not as a "road guard"
I tried never to miss more that a day on Hf ham radio, even

if it was from the cockpit of a B52..

Awwww! Sorry no comparison...I was playing pirate radio with a
Meisner Signal shifter, homebrew wireless mike, and homebrew amplifier
and getting neigbors to call a payphone to answer contest questions
when I was in grade school..big deal!! Frank, WA2KOS, Karl, WA2KBZ
remember that?..Yeah Drew let's compare..
Sorry Drew, but your are a WASTE OF SKIN...

>And you are sadly typical of your kind; an adamant pro-coder who believes
>that your way is the only way. Hey, "if I had to do it, they should have
>to do it too", right? The no-coders aren't "real hams." Never mind that

Nope...What I believe is your way is a losers way...your way takes
something and makes noting out of it.

4263. List Of Notable Amateurs [25 Dec 95]

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-25 00:00:00 UTC
From: dave@eram.esi.com.au
Message-ID: <4blknu$h74@eram.esi.com.au>
Source record: 233487
Cross-posted to: rec.radio.amateur.misc,aus.radio.amateur.misc,rec.radio.info

This is a list of the "notable" Amateur callsigns that I have been gathering for some time. I would appreciate any updates - send them to "dave@esi.com.au". Of course, "notable" is purely in the eye of the beholder; I consider it as someone in the (non-Amateur) public eye.

Another way of putting it is: "Did you know that XXX is/was an Amateur?" when explaining to someone what Amateur radio is all about. Thus, people like Monk Apollo etc would be regarded as notable (who would think a monk would be an Amateur?). Note that I have deliberately left out the current crop of Astronauts - it doesn't seem to be a novelty any more.

They have been gleaned from various places: amateur magazines, USENET postings, and straight-out rumour :-) It is probably out of date, and most likely contains errors. However, over time it should develop into an accurate list, suitable for PR purposes. Please note that I have no way of authenticating most of these entries.

Reproduction in part or whole permitted if the source is acknowledged.

Thanks to all who contributed - I tried to acknowledge each one. Special thanks to "The Canadian Amateur".

Enjoy!

7L2NJY Dr Mamoru Mohri, Japanese astronaut

Message-ID: <4bp0si$qkj@fohnix.metronet.com>
Source record: 233240

: Dear friends,I tried to build a dual driven cubical quad 4 elements
: monobander for 20mt. but due to lack of informations the risults were
: not so good.So, if you have any idea,suggestion or description about
: this argument,please let me know it via e-mail or newsgroup.

In CQ Magazine about ten or twelve years ago, there was a very good
article on a dual driven element, 4 elemment quad. Sorry, I don't remember
the exact issue. Hope that helps.

Didn't you take the tech test by mail?..After 1954 the tech test was
taken by mail...There were 8 variations of tests at that time..It
wasn't till after 1976 that they stopped the tech mail tests....the in
house exam I had did have the fill in as you call it..specifically
about biasing of amplifiers..and their classes.. The tech test was
supposably the same as the general test, but I only remember seeing
multiple choice and the oscillator drawings/ identification on all the
tech tests I administered..there were variations even among the
general tests..
And of course they tested your sending of cw at the FCC then too!
The little old man with the cigar was intimidating to a young kid :O)
We had to go across the street from the FCC and get the paperwork
notarized for 25 cents too..

I probably know more about electronics than most of these memorizing the question pool generals and above do. Myself I am a no-code tech and I have helped more General Class and Tech + hams with setting up packet and building antennas. Just because someone is a higher class than you does not mean that you are a real ham just like them. I like my vhf and above right now and when I decide to upgrade I will. It is people like those snotty generals and up that makes me want to not upgrade just so they will stay away from me. I find that most of the nicer people hang out on 2m and 70cm. Besides you can't do high speed packet radio on hf so why bother. :)

I know this is last minute, but I was hoping someone could tell me the frequencies of some (if any!) repeaters in Calgary and further West.

I'll be there tomorrow and will be travelling West from Calgary through Banff, Canmore (sp?), Rogers Pass, Golden, Revelstoke, etc. Are there some repeaters along that route I can use?

Please e-mail me, since a reply to this newsgroup will probably reach me too late (I fly today at 6:00pm).

Thanks, and 73s,

John

>Steve, WA2NHZ

I just dug up the some of the old de-classified Tech exam version and
another variant Tech/Conditional exam...you did not have to draw any
schematics on your tech tests if you had those versions...you had to
just identify the circuit by multiple choice..the tests were marked
specifically depending on the dates and versions 1. Technician
2. Technician/Conditional....differentiated from General with some
differences in question types including the drawing of schematics
and as I mentioned some fill ins..Possibly versions used since they
were in the hands of FCC examiner..
By the way how many questions do you remember being on your test?

Ilove the way people generalize. They assume (make an ass out of
you and me) that since they hear some (and all Operators) on 75 meters
acts like little children that all amateur with an Extra license act
that way. There seems to be those kind of people with all grades of
license. I myself have never operated on 75 meters.
There is one aspect of having to learn code that most of you over
look. With code you have to listen. There are too many that have a
license not requiring code that never have learned to listen. They
are buttins on 2 meters. The only thing that they want is
recognition. To wit :N3NERD listening. How can he listen? All he
wants to do is talk.

I bet 99% of those that read this cannot answer this. Of course we will never know because those that cannot answer, will not, so we will never know.

If a tranistor is driven into saturation and the collector is attached to a 1000 ohm resistor with 10 volts Vcc what is Vce?

If the same transistor is cutoff what is Vce?

Will the tranistor get hotter at cutoff, saturation or in the middle of its conduction range?

Just going by memory, but I seem to recall back in the 70's that the form of the test; multiple choice (with their own answers), essay, verbal etc. were the decision of the person responsible for administering the test. But since I don't have a 1973 or there abouts rulebook, I can't check on it.

So both Steve and Bill may be correct in recalling different test methods.

Jim

Yes. I admit it. I have committed the ultimate mortal sin. Several years ago, I did indeed communicate on my CB radio with stations that were more than 150 miles distant from my own. A capital offense, no doubt. Do I get lethal injection, or am I going to be sentenced to a public hanging for my heinous crime instead?

Are you also going to tell me that you have never, ever picked up that CB mike and talked skip?

I assume nothing. I can prove everything I say. Its funny how 50 other people can cite what he said in the past...then he comes along and denies ever saying it...I think this clearly show his level of intelligence...he further believes we are as dumb as him...interesting.

I have all of his posts, and as I said, can prove everything I say. It really doesnt need to be done for 3 reasons;
1. Waste of bandwidth (its nothing but drivel anyway).
2. Everybody has alreadt read it...and knows what kind of person dru is.
3. Consider the source.

I stand by my words, and know that others know dru for what he is...not because of something I have said. Ya know, dru has not threatened to sue me in a while...perhaps its time for him to 'show off' a little bit more. [grin]

From: MMiller@netins.net
Message-ID: <MMiller-2612951559490001@s183.netins.net>
Source record: 233261

Howdy all,
My HTX-202 occasionally flashes the error 2 msg. This happens more often when I have it hooked up to my TNC, but it has happened once or twice when not hooked up to the TNC. If I turn it off, the error msg usually doesn't come back, at least not immediately. Also, I've observed that switching from a power supply to a battery pack makes the error code go away. I've owned the HT just over 1 year, of course. Anyone with similar problems? Advice?

>I am new to this newsgroup, who the hell is this "Drew"?

Drew is a newly licensed ham (3.5 months) as a tech, who is also a ham basher.

If you politely disagree with him, or wish to have scocial debate, he will
hurl insults at you, call names, make assumption, attack you, mis-label fact,
spew ignorance, and end up lieing about it. He has even made up lies...to
cover previous lies which he cant keep straight.

I had a short debate with him about 3 months ago, and attacked me so greatly,
I had to have my server lock him out of my mailbox! (he even lied about that)

He even went as for to (still LOLing) sue me for libel! Youll also find that
he is a 'know-it-all', 'been there', 'done that' kid too. If you get a chuckle
from these imature types, just keep listening...he cant help it.

There is another guy that some find offensive, and his name is Burt. I think
Burt posts just to get a response...I dont belive hes as dumb as he would lead
us to belive, but drew...

Youll see for yoursef. :)

Take care, & welcome to the group.

It merely shows more about your true character. It shows that you
enjoyed working "skip", and now you want to be able to "work skip" in
the ham bands, but you don't want to fulfill the requirements that
the regulations call for.

>Are you also going to tell me that you have never, ever picked up that CB
>mike and talked skip?

Can't say I have. The limit of my CB exposure was one month in the
mid 70's when a relative gave me a 23 channel CB radio that she had
won on a local radio station.

Drew is a fellow who has the temerity to challenge CW (Complete Worship) as the only worthwhile thing in amateur radio. This releases the kill hormone among the CW almost adept and they insult each other for a time as the rest of us laugh. It has been particularly vicious the last week or so, perhaps in respect of the Christmas season. Unless you have a slightly warped sense of humor (I do) I would recommend giving it a pass. Drew is actually a nice guy for a heretic. I presume I will be blasted for this post watch and see if you care.

QCWA has no requirement of "proof" of first year of licensure, but the certificate from the Callbook people would certainly help if there was ever a question. Forgeting the year isn't so bad... I know people that have forgotten their first call sign!!
Incidently, the new FCC database maintains all information on a licensee. Thank God for technology - our children will never have such questions!!

While I was back in the old home town over Xmas
I was rumaging around in the attic and found a knight Kit
that I had built back in the 50's. I was wondering if
there was anyone out there who remembered the 12-in-1
Electronic Lab Kit. The kit consisted of a particle
board base about one foot square. On the left side
was teh power supply and a 12K5 tube under a perforated cover.
The rest of teh bvoard had three terminal strips mounted
an inch or so above the board. Various electronic
components were mounted between the strips and could
be interconnected by soldering wires in appropriate places.
There were terminals for an antenna, mic, earphones and ground.
Thre was a hand key in the front right corner and a volume
control and variable capacitor along the front edge.

There were 12 projects to wire including an AM
transmitter that put out a signal in the AM broadcast
band. I seem to remember a poto-electic project and
a morse key also. I had a ball with it at the time.

I was unable to find the book that explained
the hook ups. It is probably long gone. I was
wondering if anyone else remembers this and perhaps
might even have the book. I sure would appreciate
a copy of it.

Happy New Year!

Dave Smith WA1UWU

Having business interests in Austin, Tx. and certain restrictions to get ham radio equipment in Brazil, I have looked for these guys twice, and I'd like to testify here that they offer very poor service. They're much more concentrated in selling you what they have in inventory rather than what you want to buy. If you complain, the answer is always the same: "if you're not satisfied, the closest store is in Orlando, Fl.". They carry limited choice of equipment and are very little market and customer oriented. This might be why these stores are going out of business, being replaced by catalogs.

>does not recall any essay tests being part of his general exam.

And by essays, I mean it was not a multiple guess question..The question asked to describe the biasing techniques for the different classes of amplifiers..it had to be briefly answered in a few sentences...Also schematics had to be drawn and missing components had to be drawn in...I remember it very well, and so does my friend WA2KBZ and a number of my other long time friends..

Also on another front..there is nothing wrong with establishing another class with 5wpm speed, however Drew wants to abolish cw on the exams entirely...

For a fee, the Callbook will send you a certificate showing you what issue you were first in. A lot of organizations will accept this as proof of time, like if you want to show you are indeed a candidate for the QCWA, for example. (P.S., I don't know if QCWA actually will accept them, I was just told they might...)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 DECEMBER AND FORECAST FOR 27 DECEMBER - 29 DECEMBER
Note: Services will be provided at normal weekend levels until
27 December.

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 25 Dec
Daily Proton Fluence >1 MeV: 1.1E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.5E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Dec 28 Dec 29 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Dec: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled

Estimated Indices : A K Observed A Index 25 Dec
Learmonth 10 3222 3232
Fredericksburg 9 13
Planetary 8 11

Observed Kp for 25 Dec: 3322 3332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Dec 8 unsettled
28 Dec 8 unsettled
29 Dec 8 unsettled

COMMENT: A weak recurrent geomagnetic disturbance is in progress.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Dec Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Dec Normal Normal Fair
28 Dec Normal Normal Fair
29 Dec Normal Normal Fair
COMMENT: Slightly degraded conditions possible for high latitudes due
to a weak recurrent geomagnetic disturbance.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
26 Dec -20

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values to 15% depressed with sporadic
E 10-17UT.
Townsville: 15% depressed with sporadic E 9-18UT.
Sydney: 15% depressed with sporadic E 8-11UT, 21-23UT and spread
F 11-19UT.
Hobart: 15-20% depressed with spread F 11-18UT and sproadic E
8-10UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
27 Dec -10 Near to 15% below predicded monthly values with
sporadic E.
28 Dec -5 about 10% below predicted monthly values
29 Dec -5 about 10% below predicted monthly values

COMMENT: Slightly degraded conditions are possible for high latitudes
due to a weak recurrent geomagnetic disturbance.

Seems to me I read somewhere that Harris Corporation of Melbourne, FL makes a radio used by the Navy that can move duplex signals at 9600 baud over HF. Don't know if civilians can buy them or how much they cost. If you find out let me know.

Good Luck

Upon re-thinking this point, I now recall better that the control offered
was actually a stepless +- 5kHz fine tuning and not a tunable BFO as I had
said previously. Also the BFO was a feature that was offered on only the
models for certain countries, as was the choice of the top end of the hf
tuning range, being sometimes 27 MHz and at other times 30 MHz.

I also might add that the tests in the 40's were different..I believe
the regulations were revised in 1951changing class A, B, etc to the
ones we are basically familiar with today..so actually did your dad
have a General or class A, B, C and was his administered by mail
or in person..The tests were revised many times during that period..
I actually have copies of old de-classified exams from those periods
through the 60's.. Also in what year and where did you take your
General test? Mine was in 1960..and in NYC at the FCC..Did you take
your General in the 60's, 70's or in the 80's? There was also a
difference between the do at home Conditionals and Technician
licenses--I administered lots of them..

> It will be very great help if you send me one.

I use the SW55 for shortwave and broadcast reception and I like it very much. It can be used for CW/SSB, but is not ideal with wide filtering and rather large tuning steps (100 Hz, I believe). There are enough memories for most purposes and the set is very pleasant to hold and operate and shows good sensitivity. It has some toy gadgets, such as world time and daylight display, but these don't really detract from the set's quality.

I am very familiar with the older 7600D and that set was mainly limited by too few memories (10). The tuning steps were even larger (5kHz) but the set also had a tunable BFO. I have not tried the newer 7600G so I don't know how Sony have improved the model. I don't know the SW33.

I used a Motorola 67805P3 microcontroller to do something like this. Reads the BCD from the SSI202, and decodes it to control functions, if this info might help let me know, but there may be a stumbling block in writing the code for the purpose, and display driver.

Hey! What did you ask them to get the folks there even close to surly,
etc???

I've dealt with them while I lived in Austin, bought probably around 7 or
8K of stuff, and always, always was treated just fine by all concerned.

Austin Amateur Radio is a must call when shopping, and I can tell you, I
have always had the best deal from them.

Hellow?

I've decided to buy a shortwave radio receiver.
There are SONY ICF-SW33, ICF-SW7600G, ICF-SW55...

I want impartial report or advices about them.
It will be very great help if you send me one.

Good bye.

4330. Wanted schematic for RCI 2900, 2950

Don't feel bad Mike, I have spent a few hundred dollars buying up old callbooks looking for my name and callsign to use as proof for QCWA and the only time I did find it, it was listed under my Elmers name instead of mine, bummer.

I also called the callbook company and sent them in the required fee for looking it up and they turned up no results.

I have a few awards from the ARRL one being a serialized numbered WAS certificate bearing my name and callsign and they claim they lost all records of WAS awards previous to number 10,000. I thought, no biggie, I have several other references, like an unsolicited award for Emergency Communications Commendation, A Certificate of Code Proficiency with four added award stickers for higher WPM, they couldn't find any of those either. I really lost my cool when I discovered that I was never listed in their magazine when I earned a DXCC award and they had no record of that either.

Needless to say, with all the other problems I had with the ARRL, I am no longer a member and never will be again.

As a last resort, I sent a few letters to the FCC, I knew before I sent the letters that it was next to futile, not only could the FCC not find my first call, they could not find any, even my then current license callsign which appeared in every database across the country, but not the FCCs.

When I upgraded, the FCC again lost my current call and denied that I ever had a callsign and I was required to retake all my tests. They later discovered my callsign they said I didn't have and rectified the situation, but they still blundered and I appeared in the 1995 callbook twice under two separate callsigns and I received 5 different callsigns in a 30 day period, burp. Don't believe me, look up KB0LMW and N0ZOI two of the callsigns I received last year.

For over 25 years I held the callsign KA0CDE and previous to that callsign I had about three I don't remember, but my first callsign I

will never forget K0VCH issued October, 1959.

I am currently licensed as KG0ZP.

>proven one, could you please let me know abut it?

>Ramon
>KP4GE

Save your money Ramon, if you have a cassette player, make your own.

Use normal usage words like Age, QTH, SK, AR, HR, HPE, CU, Name, Is,
73, BK, etc. and send them once with a pause then three times in
succession. After you master those do the same thing only forming
sentences of first two words then three.

Start at about 15 WPM on side one of tape one, 20 on side two, 30 on
tape two and 35 on tape three.

You'll be amazed at how easy code is once you get up into the higher
speeds where you hear words instead of letters. I'm sure you
recognize CQ without ever thinking about the two individual letters.

Practice using only the word "Call" until you get up to 35 wpm and
you'll see what I mean. If your shooting for your 20 WPM test,
listening to code at 30 to 35 WPM, whether you can copy it or not,
makes the 20 WPM seem like a novice test.

In article <4bi83njaj2@mhadg.production.compuserve.com>, Brian Webb
<102670.1206@CompuServe.COM> says:
>
>I just purchased an MFJ-1270C TNC. It has HF weather FAX
>capability, but the user manual says virtually nothing about how
>to use this feature. Does anybody know how to command the unit
>for WEFAX reception and the tuning offset to use with my HF
>receiver?
>
>73s
>
>Brian Webb, KD6NRP
If the MFJ1270c is anything like the MFJ1278, the wefax reception is
pathetic. Black and white with NO resolution. Check out you
disk that came with the tnc. In the 1278 the command is something
like mode fax NNNN where NNN is the type of fax. I don't have my manual
here(at work)but I will look up the exact command and what program
I had to use.

A much better approach is to download JVFAX 7.0 from either the ARRL,
Amsat, of(I think) the oakland ftp sites. It is near freeware, Works
GREAT and uses a simple uA741 powered by, and "talking" to a Asynch/comm
port. Costs less than $5.oo us if you buy everything new. It is really
the best way to go. Hamcom is another good(though not as gooda as JVFAX
in my opinion). If you have a "real" or 100% compatable Sound blaster,
you could try WXMAN2. It does a good job just by feeding the sb card
with audio.
8080KHz is the best place to start. Nam is on every night as of a couple
of weeks ago. I guess they will keep on the air even if the Feds can't
get their budget togather.
None of the above programs can receive NOAA wx sat fax with out some work.
JVFAX has a diagram for a WX sat am to fm fax converter. It uses an exar
2201?(check out the diagram), and while it is best to build a "real" am
fax demod, you can get impressive results by feeding the output of the
exar to any of the above programs.
Good luck
Email me if you have any questions, I won't be back on unitl jan 2, 1996.
(unless I end up in here for something else)
WEFAX is great fun, do not get discouraged by any intitial hassels. Hang
in there. It will be worth it.

Get a GIF of K1OIK by telnet://ccsnet.com and go to FREE downloads for bf1pres.gif (hams never had such excitment!) or call 508-385-3427 and download from file area 21 (free).

4346. 'ISM' type comm equipment: thread for 70cm band?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-27 00:00:00 UTC
From: geertj@ripe.net
Message-ID: <DK8z6r.Kp3@inter.NL.net>
Source record: 233295
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi there,

The Europification has brought some very bad news to European
hams who like to use the 70 cm band.
In most countries, this band is shared with the ISM service
(Industrial, Scientific, Medical). ISM is intended for those
applications where RF is needed (and can leak) for other purposes
than communcation: welding, melting, and the like.
One of the ISM allocations is 433.920 MHz +- 0.87 MHz.
The European 70 allocation is 430-440 MHz (in some countries
4332-438 MHz, may be even less). Small-bandwith is concentrated
on the lower end of the band; 432.300 is SSB calling freq,
433.500 is FM calling freq.
Other users (including hams), 'should accept interference caused by ISM'.
Since ISM is usually in industrial areas and hams usually don't live
there, these usages were more or less compatible.

Apart from ISM usage, this ISM band is also used for door openers,
car alarm remote control, and the like. This has lead to situations
where people were unable to unlock their car because of the neighbour
having a contest, but no serious harm was done.
All of these are 'low power apps'

However, some new rules may change that all. The low power apps
limit is now raised to 10 mW, and plans are made to build wireless
loudspeakers and 2-way comm equipment for the band.

Of course, if these applications are interfered by hams, then the
ham applications have precedence. (if you ever thought that RFI problems
were difficult, then try to explain THIS to an angry neighbour who
just bought a $3000 high-end TV set with wireless surround speakers!)
I'm not shure if the precendence rule will work for us in practice.

Another concern is the 2-way radios, as these may be compatible
with regular ham equipment, and we all know what can happen then.
Note that most of the 70cm FM allocation would be part of the ISM
frequencies, and there's no protection against someone calling himself
W1AW there - it would be nearly impossible to protect against making
contacts with non-hams.

Has anyone seen these 2-way radios yet? What frequencies do they use?
What raster? modulation? Are they provided with built-in CTCSS or something
like that? Would we hams be able to use CTCSS or something similar to
shield against the ISM folk?

How have other people dealt with this kind of situation? Are we doomed?

73, and best for 1996,

Geert Jan PE1HZG

4347. Antenna recomendation needed

Hello:

Maybe I can get some help from you. I am interested in getting involved in had radio but have no idea where to start. I know that I have an interest in communication. I don't know what each beginning license will let me get involved in. Starting with a no code license might be easiest to start with however I didn't want to start spending money on equipment that I won't be happy with. Where should I go to get the information that I will need to make a good startup decision.

Thanks Bob

So what is it, did I miss the boat here?

You may also check out my Ham page @ http://www.cyberhighway.net/~relliott/

I have a couple of pages under construction, I have a page with mostly Radio Oriented links and a local scanner listener
frequency listings.

Hey there Drew. I passed along your comments to 2 "World class QRP DX'er"
types.

After they got to the past about doing this on 11 meters, they gave me
these words to pass along to you.

First, however, they had to stop laughing..

They are very much interested in meeting you. They would like to know
where in the universe you might live to have the solar peak when it did.
More importantly, they would love to share equipmemt notes. Seems, the
have very elaborate set-ups to work the work on 5 watts on any bandm,
especially their antenni. most of which is home brew. What type of
antenna did you use...3 x 3 moonrackers?????

The obvious was that you exagerated just a tad, the not so is you either a very poor liar or a blithering idiot.

They also read your original post and the thread was concerning CW, the ham bands and your having worked many many countries on 5 watts. Never any mention of CB!!

now thgat you have shown us an example of what we might find if they eliminate code..in otherwords, someone who proudly can say he broke the law, I am getting off the fence and will fight you (no code HF) wherever and whenever I can. You are a poor example of, or should I say a prime example of what will happen to this hobby of they continue to "dumb down" the entry fees.

Should that day ever come, and I know I have at least 3 years befor it won't, I will take all my equipment, stick a thumb up my butt, drool alot on my overalls and start calling

Source record: 233317

Many electronics stores carry an ARRL book entitled "Now You're Talking," while a smaller number carry "The ARRL Operating Manual." The first is a study guide aimed at passing the Novice and/or Technician Class written exams: the former license gives limited privileges on worldwide shortwave bands and some local VHF communication options, while the latter gives full privileges on all VHF and UHF bands used by hams (including the 50 MHz band that can be a worldwide band for a few years out of every 11-year sunspot cycle). The Novice license also requires a 5 word-per-minute Morse Code test in addition to one written exam, while Technicians pass the Novice test plus another written test and can optionally take the 5 wpm test to get the combined privileges of both types of license (this is called a Technician Plus).

The Operating Manual gives more discussion of what hams actually do after they get a license. If you can't find either book locally, they can be ordered from ARRL at (860) 594-0303. Information can also be requested free from the ARRL by calling (800) 326-3942.

You may wonder who this ARRL is. The American Radio Relay League is the largest ham organization in the U.S., with roughly one fourth of U.S. licensed hams as members. Its monthly magazine publishes technical articles aimed at both new and experienced hams and includes articles on operating techniques and competitive operating events. Enjoying ham radio is also greatly aided by joining a local club, of which most areas have at least one.

Good luck!

Paul,
A DSP filter will help with the noise, but it won't do anything about
the strength of the noise on your S meter. If you're sure the noise is
local you might be better off eliminating the noise before it gets to
the receiver. The ANC-4 from JPS connects between your rig and antenna
and can significantly reduce power line noise. Email jps@nando.net or
read about it at:

http://emporium.turnpike.net/J/JPS/jps/html

I did my part Eric! Over the holiday weekend, I used my limited HF
priveleges on 10M, speaking with a super guy in Cranston, RI Norm, KD1WD,
while mobile in Eastern Virginia, among others. Also heard great 6M activity
while in Norfolk, including a gentleman in Havana, Cuba. (Pileup!)

There were lots of folks on 10 and 6!

>use the continuous-form cards if possible. VP2VBL.
>
Options:

1. Get a laser printer that handles continuous forms. I think there was one a few years ago but that may be faulty memory.

2. Cut the cards apart into the minimum size that your printer will handle and write software that prints that many cards per sheet. Most printers will handle 6 by 5 inch forms so you should only have to do 2 at a time. A desktop publishing program will make doing the actual layout easier than a word processor.

Goo luck,

I had real good luck going from 5 wpm on paper to 25 wpm in my head in less than a year by checking into my ARRL Section's CW Traffic Net evenings and handling traffic; there it's sink or swim and you get to play with the real QRQ boys.
Don't be misled; I found the ops there to be quite supportive, accommadating and encouraging; nonetheless it DID raise my speed that much that fast. Also, in the early 80's QST published an article called "QRQ 20", a two-pager, and the techniques described therein seemed to help more than any amount of tapes, etc etc.
NG9U reports good luck with the Bahr "subliminal" tapes but they didn't work for me...

Hope this helps, and all the best to you.

Hi Paul,

I read someone else's comment on the ANC-4 sometime ago. They said it worked miracles with their line noise. Since it goes in the antenna line ahead of the rig, you eliminate the noise before it gets to your S-meter.

Message-ID: <4bqln0$k5c@navajo.gate.net>

The South Florida Radio Pages are now on the web, with links to the web pages of many local radio stations and programs originating in south Florida -- and various other radio-related resources.

http://www.univox.com/radio

Included among them is a link to the page for Miami's annual amateur radio & computer show, the Tropical Hamboree & Computer Show '96, February 3-4, 1996, at Miami's Youth Fair/Exposition Fairgrounds.

There's also info about Craig Crossman's syndicated Computer America radio show, which originates in W. Palm Beach Sunday afternoons. And Logon, Dante DeAngelis' talk radio program about the 'net, heard Sunday nights at 11 PM on WFTL, 1400 kHz, Fort Lauderdale.

I'm looking for suggestions for other relevant links, too. Especially radio hobbyist clubs headquartered in south Florida.

AT&T is busy installing PCS equipment licensed for band A 2GHZ and Narrow band 940Mhz at a public facility I work at. Review of their specifications show a singular T1 driving the installation. Range on a line-of-sight installation in open terrain with antenna HAAT around 100', the effective coverage zone is 1 mile. Getting into 2 miles puts you deep into the roll-off zone. The facility has several buildings with several floors and configurations. Due to presence of public, ERP is being limited to around 150W. (About 6-10 Watts at the Amp)
[Look Ma, This plastic dome is a magic sun lamp]

I dont think we'll be seeing ethernet data rates on any publicly offered PCS net with these kind of specs I'm reading through. I think their target market isnt the heavy video conferencing crowd they play it up to be. Most lines will service digital cellular telephony.

Cheers

When buying New/Used equip from Frank be sure you
perform an operational check on the equip. Be sure
and verify that ALL of the options that he says are
"installed" are actually in the equip in question.

I bought a Icom V68 HT in which he told me the CTCSS
tone board was installed. I took his word as a fellow
ham. To my dismay, I later discovered that NO CTCSS was
installed!!!

When I contacted Frank he was very rude and told me that I
should have known better and that CTCSS was an option, not
standard. I knew that it was an option and specifically
asked if it was installed as the radio was useless to me
without the option. He told me it was installed!!!

Franks told me that If I wanted any refund that would have
meet him in Burnaby BC, a 6hr drive from my location. Not much
of a solution, eh?

So,take this into consideration if you are thinking about making
a purchase from Frank.

I'd suggest any one or all of the following:
1. Listen to the code practice sessions on W1AW. The schedule is published
in QST and can also be gotten from one of the ARRL's web pages, the main
one of which is at http://www.arrl.org
2. Download Morse Academy. Since the ARRL distributes it (and in fact uses
it for their exams) it can probably also be gotten from the same WWW source.
3. Super Morse is another good CW program. I know it can be gotten on the
Compu$erve hamnet forum but may also be obtainable from the ARRL.
The ARRL also has a pbbs, the number for which is 860-594-0306.

Hope this helps, and good luck!

: I've dealt with them while I lived in Austin, bought probably around 7 or
: 8K of stuff, and always, always was treated just fine by all concerned.

: Austin Amateur Radio is a must call when shopping, and I can tell you, I
: have always had the best deal from them.

I have never dealt with AAR before, but will probably call them for a quote
on an IC-706, along with Oklahoma Comm Center.

There was a similar thread on this newsgroup a few months back, where there
were numerous complaints about the attitudes of salespeople at both HRO and
AES, experienced by walk-in customers.

However, I have bought quite a few items since from HRO, visiting their
stores in Anaheim, Burbank and San Diego. I have never been treated any
less than I would expect on any visit. One of the salesmen at HRO-Anaheim
even held on to his last antenna of the type I wanted, until I visited the
store two days later, with just my word that I would be there to buy it.

Last time this thread went around, someone suggested that the attitude of
the customer could have something to do with the problem. Not to accuse
anyone here, but this is something to consider.

'Don't have any direct information, but this might be helpful:
I have an old Motorola System 500 (CB-SSB) which uses a "Mocat TMN6119A"
...all these numbers probably won't help, but there is a good chance that
the Motorola tended to carry over similar design:
This mike has four wires...the push-to-talk switch is a single-pole,
double-throwswitch with its common to ground. When pressed, it grounds the
PTT line from the xmitter (which also happens to be RED), and simultaneously
enables the internal transistor-amp in the mike, by also grounding its
emitter (which is also common with the Red PTT wire). When the switch is
released, it now grounds a wire that enables the Receive function in the
main unit. I'm betting that if you find that your Push-to-talk switch
connects similarly to three of the wires (including the red PTT and ground
wires you mentioned) the wire to the other side of the switch will similarly
be to enable the Receive function. The remaining fourth wire will be the
audio out from the mike and will have + voltage on it via +12v and the
collector resistor supplying the mike-transistor. If your main unit doesn't
have a coupling capacitor, one would need to insert one in series with this
fourth wire to block the D.C.(correction...would have to be in the main unit))
In my case, the main-supply + had been reduced from +12 to +8.2 (while in
Receive mode). My colors were: Shield = ground, red= PTT, black= Rec-enable,
and white=mike audio out. 'No suprise that colors aren't consistent!

4407. 2 Channel Maxtrac to 16 Channel Maxtrac Conversion?????

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-28 00:00:00 UTC
From: scanner119@aol.com
Message-ID: <4bthol$s17@newsbf02.news.aol.com>
Source record: 233160

I saw a posting on here the other day on converting a 2 channel Motorola Maxtrac(VHF High Band) to a 16 channel. I have access to both the software and hardware I need some technical advice on how to do it. I have
4 mobiles and 1 base station I use for my construction company and would like to convert them to 16 channel radios. I priced out new radios from a local guy and he wants $425 a pop for 16 channel ones(used, no less) and I spoke to a friend who says the hardware is only about $25 for each radio so I
figured this was the way to go. I really could use some help from you guys.
I'm really not a radio-guy, I'm a scanner-guy myself. Any help would be greatly appreciated. Thanx in advance.

This is not the newsgroup present, it is the raving of two hopeless twits. Drew pulls your chains like puppet strings and you keep making fools of yourselves. I'm in this newsgroup too and you sure as Hell don't represent me.

The two big ol' Boy Scouts are the worst. I thought the Boy Scouts taught some sort of Judeo-Christian ethics perhaps you clowns missed that day. I'm not a Scoutmaster just a lowly merit badge instructor so my opinion may not count for much but my classes are better behaved than what I see here from you two. I'm only sorry to see impressionable young people being influenced by hate mongers like yourselves. Perhaps the Hitler Youth has a few openings.

Real tired of it too Jerry

Alas, the biggest lie yet! Dru is the KING of insult and name calling!
Dru has always name called and attacked first...just look at any of his
earlier posts...they speak for themselves. I have NEVER called him any
names...and he has called me many. Reason why I had him locked out of
my mailbox, because he DOESNT debate. And if he does, he uses mis-labeled
fact, assumptions, and lies.

What a guy dru is....

transistor...(student gets point for finding prof's spelling error!)

>>to a 1000 ohm resistor with 10 volts Vcc what is Vce?

well, if we assume that we have some garden variety transistors laying around
i'd say Vce would be around 0.2 V.

>>If the same transistor is cutoff what is Vce?

pretty close to 10 V.

>>Will the tranistor get hotter at cutoff, saturation or in the middle of
>>its conduction range?

would be in the middle because heat in the transistor is proportional to power
and that's proportional Vce times Ic..so at the end points one of those two
numbers is near zero and so power is minimal. someplace in the middle should
produce max power and then max heating.

I agree that many people cannot answer these questions and it's
a great tragedy.

However most hams who try to learn these things do so on
their own, without teachers who have had formal training in these
subjects and when confronted with something they don't understand
have only themselves and high school algebra to fall back on.
It's no wonder that most ham's electronic understanding is riddled with
anecdotes and misunderstanding. It's a miracle that hams understand
anything at all.

As well as having a steep learning curve on the theoretical
side, the entry costs to build equipment both in time and facilities
are enormous. Ham radio is difficult for children to take up
unless they have sympathetic and financially supportive parents and who
have a house where it's possible for junior to have a workbench where a
project that will take a long time can be done. It's difficult for a 12yr
old to build much that would be fun with just a soldering iron and a
voltmeter. It is even more difficult if father is perplexed about the
whole matter and mother is hysterical that the kid is going to electrocute
himself or even worse ruin the carpet with the soldering iron.

As adults, paying mortgages and bringing up kids, it's also hard to
take the time or money to build stuff. If you go to VHF conferences in
this country, you'll find a very active group of builders and experimenters
from the ham radio community. You'll also notice that the average age is
about 50 years. A possible reason for this is that VHF equipement is not
as easily available at ham fests and that it is a lot more expensive than
HF equipment and that only the older and more financially established

people can afford it. The same was true 30yrs ago when I first started going to these type of meetings, so it's not a matter of this being a different era.

The problems of being a real amateur amateur were brought home to me when I joined up with a ham who was an electronic designer of RF equipment to do some hamming. He already knew the answers to questions that I barely understood were relevent. I did more hamming in 2 years with him than I'd done in the previous 20yrs.

By contrast the entry price for other activities which take a similar amount of time is much lower. Anyone can start working on a car for the price of an oil filter wrench and work up from there. Similarly gardening only requires a few $ for a bucket of bulbs and 6 months later you have garden full of lovely tulips. Why would anyone take up ham radio when you can get rewards so much more easily with other well accepted hobbies? - you'd have to be half cracked.

So I agree the situation is deplorable, but many people get a lot of pleasure out of it despite their ignorance. The local town is glad of our local ham club's participation in the Festival/Parade every year and the local high school is glad of our participation in the annual athletic day and I'm certainly glad to go along and push the mike button on my HT to find out where the guy with the stop watch has gone.

So thanks for pointing out the problem. It definitely needs to be fixed up and I'm willing to help you on this. What suggestions do you have?

>it will not happen until the international treaty is changed. For now, just
>eliminate testing above 5wpm unless it is a qualifyier for an exclusive
>high speed CW sub-band

This reminds me of the flaming of aol members by regular "netizens."
Now it's too easy! Now there's too many people on the net who don't
know what they're doing! Now there's too many people on the air that
don't know what an iambic keyer is or what QTH means! AAAHHHHGGGG!!

It seems elitist to me. Kinda like dos diehards that hate win-doze
cuz now any idiot can use a pc.

Isn't it funny how enthusiasts of a hobby try to get others interested
when it's relatively arcane, but when entrance into the "club" becomes
"too easy" and they have more new enthusiasts than they ever imagined,
they whine and moan.

Cliff
WB3CAW.

Dru only responds to 'certain' posts...only the ones he can lie out of, or otherwise change the subject.

Notice how he 'demands' that others prove their statements...then doesnt back-up his own words. (has avoided his claimed 'sun spot peak cycle' in 89-91)

>>Now why in the world would you think that I might have made the contacts
>>on CW? If you've gotten anything from reading this thread, it should be

In <pNHF9pY.sanderman@delphi.com> Stephan M. Anderman <sanderman@delphi.com> writes:

>One problem...
> There is NOTHING in the Congressional Record to support this "story". Has
>anyone else done any research into this? Apparently, the original writer never
>did, and this is another popular fable that has no basis in fact.

Something also to consider that even if the Congressional Record could be shown to contain something on this subject, it still may not have happened. Before reforms were enacted in this century, rules of Congress were lax enough that just about anything could be read by a member into the record whether it was actually said on the floor of Congress or not.

The potential for abuse is obvious, as many members of Congress could appease constituents and special interests by claiming to have made an impassioned plea for their cause on the floor and pointed to "the record" as proof. This led to many obviously ridiculous matters "of record," such as speeches made by members days or weeks after they boarded a plane or boat which crashed or sank, killing them.

Here is some more realistic and factual information about the origin of "ham." This will probably be put into the FAQ as soon as the volunteers currently working on resurrecting it are ready. Hopefully the return of the FAQ document (and its timely maintenance) will help dispel some of the rumors and folklore that seem to reappear on this newsgroup from time to time.

Suggested (and mostly wrong) origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initials of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.

Knowledgeable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he

had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

(Larry E. McDonald, N6ZMB, wrote to point out another plausible origin, which doesn't necessarily contradict the ARRL version. The term "ham" may have been derived from "ham-fisted" or "ham-handed" to describe poor telegraph operators who were hired from the ranks of radio operators. Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who knows?)

4427. GB2RS News 31st December 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-28 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <820193217snx@llondel.demon.co.uk>
Source record: 233180
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 31st of December and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Following the news, we will be bringing you the second and concluding part of the "GB2RS News Review of the Year", which has been prepared by GB2RS newsreader Vic Kusin, GM4HCO. That will be followed by a short solar forecast, and then the regional news. We will be broadcasting a review of propagation in 1995 next week, on the 7th of January.

Another new 70 centimetre GB2RS service commences next Sunday, the 7th of January. It will be an evening broadcast from Portland in Dorset on channel SU21. It will be transmitted at 1930 local time from the station of G1OCN, with G7OLW as reserve newsreader. Good coverage is expected of the south coast area, and reports - especially from Novices - will be welcomed.

The Worked All Britain organisation has announced a new award for amateurs and listeners which will commence on the 1st of January. The award is based on the 10-kilometre squares of the National Grid, but without county boundary complications, and is to be known as the Millennium Award. It has been introduced because of the uncertainty regarding the future of local authority and county boundaries following the Review of Local Government. The new award will operate alongside the existing WAB awards programme. Full details of the requirements will be available from Brian Morris, G4KSQ, whose address is 22 Burdell Avenue, Sandhills Estate, Headington, Oxford. The postcode is OX3 8ED and Brian's address is correct in the RSGB Callbook.

Also from the 1st of January, the Worked All Britain Awards Manager will be Kate Wragg, G0FEZ, whose address is correct in the RSGB Call Book. All WAB award claims should be sent to Kate in future.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Tanzania, I5JHW will sign 5H1HW from Zanzibar Island, which counts as AF-032 for the RSGB IOTA awards, from the 1st to the 9th of January. Activity will be on all bands, including the WARC bands, and will be on CW, SSB and RTTY.

From the Malagasy Republic, F2JD is starting a six-month work assignment at the beginning of January and plans to be active.

And from Reunion Island, JA3JM will be active as FR/JA3JM from the 2nd until the 5th of January.

Now news of a special event station,

And since 1996 is the 50th anniversary of the International Short Wave League, ISWL, GB50SWL will be on the air throughout the year. Anyone hearing or working the station who wishes to receive a special QSL card should either QSL via the bureau or direct to David Beale, G0DBX, whose address is correct in the RSGB Call Book.

Now the second and concluding part of the "GB2RS News Review of the Year", which has been prepared by GB2RS newsreader Vic Kusin, GM4HCO.

At the beginning of July, GJ4ICD observed spectacular Sporadic E conditions on the 50 MHz band, with over twelve hours of propagation to the USA and extending as far as Venezuela to the south and Greenland to the north. These followed a regular pattern for several days, with openings between 1200 and 1400 hours, followed by evening openings from around 1700 until midnight. The mechanism for multihop Sporadic E still remains a mystery, but the regularity of these openings suggests that conditions can prevail for many days with distances of 9,000 kilometres being worked.

The Council of the RSGB approved measures to reward long-standing members of the Society with a discount on their membership fees. Home Corporate members who have enjoyed 50 years of continuous membership will receive a 50 per cent discount on their fee, while those who have 60 years of continuous membership will be granted free life membership of the RSGB. In addition, a new Junior membership category was introduced for young people under 18 years of age, who can join the "Ham Club" and receive an annual subscription to D-i-Y Radio. Although the Home Corporate membership fee was increased, rates for Senior Citizens remained unchanged and fees for full-time students, family members and overseas members were reduced.

The very special callsign M1OOG was aired from the 25th of August until the 21st of September to commemorate the 100th anniversary of Guglielmo Marconi's invention of radio. This was only the second time that the Radiocommunications Agency had authorised the use of an "M" prefix callsign for amateur stations.

More tropospheric openings took place in August, affecting the VHF and UHF bands, due to an anti-cyclone centred over the UK. GM0CLN at Port Seton in East Lothian took advantage of this to work 7S6AG, a special event station at the World Athletics Championships in Sweden. After reading the GB2RS news, G4NVD in Grimsby received reception reports from Denmark, Belgium and the Netherlands and later made contact with SM7URN at a distance of 980 kilometres while using less than half a watt of SSB on 2 metres. Another newsreader, G4NZQ in Norwich, spent almost an hour after the news taking calls from Germany, with stations near Hamburg reporting solid copy.

The Institute of Electrical Engineers hosted an international conference on 100 Years of Radio at Savoy Place in London at the beginning of September. The opening of this three-day event was graced by the

presence of Princess Elettra Marconi. Several hundred leading personnel from the electronics field gathered for this unique conference, which included a series of 30 papers on the present state of the art, including some related to amateur radio. A session entitled "Tuning and the Radio Amateur" was chaired by Pat Hawker, G3VA, the RadCom "Technical Topics" columnist, and included papers called "Amateur Radio: Past, Present and Future" by G3ZCZ and "The Era of the Home Wireless Constructor" by G3BZQ. Other lecturers included Professor Martin Sweeting, G3YJO, from the University of Surrey UoSAT programme.

The Radiocommunications Agency announced that from April 1996, new amateur callsigns will be issued with the "M" prefix instead of the "G" currently used, starting with M0 for class A and M1 for class B licensees. The change will take place even if some of the "G" calls remain unused. The same regional indicators as at present will be used, for example M for England, MM for Scotland, MW for Wales and so on. Holders of existing "G" prefix callsigns and Novice callsigns will not be affected by this change.

One of the RSGB's most prestigious events of the year, the International HF Convention, was once again held at the Beaumont Conference Centre at Old Windsor in Berkshire at the beginning of September. Many overseas visitors attended and it was a great opportunity for all HF operators to meet the face behind the voice. The proceedings started with a reception for overseas guests on the Friday evening, but for most of those attending, the highlight of the weekend was the series of excellent presentations by some of the world's top HF operators and DXers. This year the RSGB was privileged to have Chuck Hutchinson, K8CH, ARRL's Membership Services Manager attending. On the Saturday evening some 155 people sat down to the "DX Dinner", addressed by the RSGB president, Clive Trotman, GW4YKL.

The Young Amateur of the Year presentation was made at the HF Convention. The winner was 16-year old Leroy Kirby, GW0ULC, from Cardigan, Dyfed. His achievement earned him a prize of 300 from the Radiocommunications Agency, together with a conducted tour of the Radio Monitoring Centre at Baldock and a general coverage receiver. Leroy is actively involved in his local amateur radio emergency service and is the vice-chairman of a YMCA amateur radio club. He is a keen contester and has an interest in packet radio, where he helped to set up a local bulletin board system. The runner up was 15-year old Charles Banner, G7UBA, from Birmingham. He is a GB2RS newsreader and promotes amateur radio through special event stations and teaching newcomers on a Novice Licence training course.

Gerald Clews, G7PRF, of the Electrical and Electronic Engineering Faculty at King's College, London, was presented with a cheque for 500 from the RSGB Legacy Fund by a Vice-President of the Society, Ron Broadbent, G3AAJ. The RSGB Council agreed to use some of the Legacy Fund, which had lain dormant for some years, to award an annual bursary to a university and, after approaching several institutions, it was

decided to make the bursary available to King's College. The sum is used to help a student who is taking a degree course in radio communications or electronics and Gerald was chosen by the College as being the most deserving student. Having taken a two year foundation course, he is now studying for a Bachelor of Engineering degree in Radio and Telecommunications. The donation will enable him to progress further with his course.

Over 220 special GB callsigns were issued to stations for the 38th annual Scouts' Jamboree on the Air which took place over the weekend of the 21st and 22nd of October. Many stations were helping Cubs and Scouts to achieve their communicator's badges and enabled them to experience the fun of the hobby at first hand by exchanging greetings messages with other Scouts all over the world.

The World Radio Conference WRC '95 discussed the proposal to delete Radio Regulation 2735, which requires national administrations to test for proficiency in Morse code before permitting amateurs to operate on the HF bands. The decision has been deferred, and the matter will be on the agenda at WRC '99, which will give sufficient time to obtain a considered opinion from all amateurs within Regions 1, 2 and 3.

The RSGB Annual General Meeting took place at the Royal Society of Chemistry in London on the 2nd of December. The RSGB President, Clive Trotman, GW4YKL, presented a cheque for 25,000 to Ron Broadbent, G3AAJ, for the AMSAT Phase 3D satellite project. In addition, it was announced that the RSGB will make a further contribution of 25,000 on condition that AMSAT-UK raises a similar amount from other sources.

In the Council election, M H Claytonsmith, G4JKS; R Biddulph, G8DPS; and J Greenwell, G3AEZ, were elected to serve on the 1996 to 98 RSGB Council. In the Zonal elections, G Adams, G3LEQ was elected for Zone A; D Whalley, G4EIX, for Zone B; F C Stewart, G0CSF, for Zone C; J N Gannaway, G3YGF, for Zone D; and T W G Menzies, GM1GEQ, for Zone G.

That concludes our look back at the year 1995, as reported on GB2RS. It was prepared by GB2RS newsreader Vic Kusin, GM4HCO.

GB2RS is the news broadcast service of the RSGB and is provided for the benefit of all radio amateurs and listeners. The script is prepared each week at RSGB headquarters and transmitted each Sunday by a network of volunteer newsreaders on HF, VHF and UHF bands, covering the whole of the UK. We are seeking more news stories from amateurs throughout the UK in order to make the GB2RS news broadcasts more interesting. The most suitable stories refer to events which have taken place during the previous week or which are about to happen during the following week or two. Apart from club and rally information, we would also be pleased to receive operating news of contests, special event stations or expeditions to rare parts of the UK or abroad. Items should be sent to the RSGB marked "Urgent - News for GB2RS". The address will be given at the end of this broadcast, or they may be faxed to 01707 649 503.

And finally in the main part of the news, the solar forecast:

This week the more active side of the sun will be looking our way. Solar flux levels are expected to be 72 or slightly more. Based on past history, the geomagnetic levels are expected to be Quiet, with Ap levels about 5. Ionospheric MUFs should improve over last week, with daylight levels in the south of about 20 MHz. Darkness hour lows should be about 7 MHz. The northern levels will be down on these by about 2 MHz.

Next week we will be bringing you a review of the propagation during 1995.

--

Have a happx holidaxs. (?)

>-. --- -.-. --- -.. - --- ..- -.-. -.- ... !!!!!!
no codt oucks (????)

I can almost understand getting x and y confused (though it would seem to
me that if you operated much cw, you'd soon get corrected on this), but
the second message is completely incomprehensible to me. Care to
enlighten me?

By the way:
1) This is all very silly, and it's really a shame to see very likely
reasonable people act in such a manner as some of y'all on this group.
From what I've read the last couple days, while Drew seems to have been
somewhat disagreeable, I think that some of his detractors have not been
much better, if better at all.
2) Yes, I am an active cw operator. Yes I operate cw at speeds abofe 20
wpm. Yes, I am in favor of keeping some cw requirement, because the mode
is still usefull. However, beyond the cw requirement, and more important
than the cw requirement, while it's a fine thing (TM) to have fun with
our hobby, should we not also act in a mature and responsible manner? CW
(or lack thereof) don't give someone this (as evidenced by this thread
alone).

3) No, I've not been licensed since the stone age; I'm only 22 and have
been licensed for 8 years. Can't use any of that in arguments against me. :)

But, if you're going to say that knowledge of cw is an important skill
and that those who don't know it aren't of any particular importance, at
least get the code right! (Besides, who uses dots and dashes to
represent code anyway?)

The discussion is not about effective use of the spectrum, it's about
relevant requirements for licensing in one particular service, the
amateur radio service.

The concepts of cutoff and saturation (or more generically full-on and
full-off) apply to any device capable of switching action. The
dissipation question (which is also a load-line question) applies to
any device that can be biased in the active region. Some car engines
run on propane, but that doesn't mean questions about gasoline engines
in mechanics school are "too limiting".

Six meters is again open right now (1926Z, Dec. 28) for the third consecutive day. The W2CAP/1 beacon on 50.070 was 559 here in southeastern Wisconsin at 1822Z. At 1841Z, the WA1OJB beacon on 50.065 was up to 549. (Those two beacons are located in Cape Cod, MA and Maine, respectively.)

I just finished working K1BQT in FN43 (south New Hampshire) at 1918, and N9VBI claimed to have just worked VE5RA in Saskatchewan.

Good hunting!

First of all, it's not necessary to have that level of knowledge of circuitry to effectively use the spectrum. A more appropriate question would have to do with, for example, what sort of stage functions are required in an SSB transmitter, or perhaps how much bandwidth is occupied by an FM voice signal given the audio bandwidth and deviation used.

Even if this question was at an appropriate level, it would still be too limiting because it deals with one type of device for which there are alternatives (namely tubes).

I made 10m contacts from Ohio to Florida, Texas, and Oklahoma.

Isn't Gordy WB6NOA? Hmmm... I don't see his ads in QST, CQ, or
WorldRadio this month. I wonder why.

: In my case, I remembered my old Novice callsign from the late sixties,
: and the people at QCWA HQ were able to confirm that I was in the
: Callbook then, therefore I qualified for QCWA. It seemed like an
: interesting idea at the time.

I did the same thing, sort of. I contacted Jim at QCWA Headquarters via their Web page, and he located the first year I was licensed, 1965, as a novice, WN8RWL, and confirmed my eligibility for QCWA, which I subsequently joined.

Sorry to hear that Gary or the others had to spend any money to find this info. Not nkowing the year one was first licensed is fairly common, especially if one has been inactive for several years in the interim. As close as I could determine, it was 1965 or 1966, during my senior year in high school.

For fun, I hooked my 1/4 watt (yes 250mW) Mizuho SSB HT up to my tribander
a couple of days ago and have been making contacts on or around 28.350.
Neat thing - 9 volt transistor battery inside the HT is enough to power
contacts >1000 miles distant (from Colorado)!

QST de W1AW
DX Bulletin 66 ARLD066
From ARRL Headquarters
Newington CT December 28, 1995
To all radio amateurs

SB DX ARL ARLD066
ARLD066 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, QRZ DX, Dick, K7BTW, Laci, W1PL, The DXNS, Derek, KC4ELO, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

KUWAIT, 9K2. Derek, KC4ELO, reports that Tom, 9K2ZC, and his wife Donna, 9K2YY, will be leaving Kuwait sometime in March of 1996. They both can be found between 14195 and 14220 kHz usually around 1500 to 1600z during this time of year. QSL Manager KC4ELO states he will start doing bureau cards when they are out of Kuwait. He plans to keep their logs open until the end of 1996. QSL to KC4ELO, Raymond H. McClure, 674 Crestlyn Drive, North Augusta, SC 29841.

WESTERN MALAYSIA, 9M2. Tex, 9M2TO, is currently active from Penang Island, IOTA AS-015 located in the Penang State Group. He will be looking for stateside stations on 17, 30, 40 and 80 meters with no times given. QSL to Tex Izumo, Bukit Dumbar Apt. 9-4, 97 Jalan Thomas 11700, Gelugor, Penang, Malaysia or via the bureau to his home call, JA0DMV, through JARL.

BANGLADESH, S21. Andy, S21YE, will be active for one more year on all bands, SSB only. S21B is also active for CW QSOs. Check 14226 kHz around 0030z. QSL via G0EHX.

MADAGASCAR, 5R. Gerard, F2JD, will be returning to France before heading to 5R-land. He plans to stay in 5R-land for at least 6 months, beginning in January. He will try to be active on all bands.

MONACO, 3A. Luc, I1YRL, will be operating from here as 3A/I1YRL during January, February and March. He will also be active from Geneva as 4U1ITU during this time period. QSL via I1YRL.

SOUTH ORKNEY ISLANDS, LU. LU6Z has been very active on 40 meter CW from 0200 to 0500z. QSL via LU6EF.

COMOROS, D6. The DXNS reports that Michel, FR5HG, is on an assignment here and is waiting for a D68 callsign.

SANTA CATALINA ISLAND, HK0. Wolfgang, DF4UW, plans to be active from this small island near Providencia, NA-049, from January 9 to 24. The call will be HK0/DF4UW. QSL via his home call.

GUATEMALA, TG. Manfred, TG9IKE, reports that David, K4TT, will be active as TG9IDK from January 1 to 10. He will work all bands from 10 to 40 meters, mostly CW, 5 up from the edge of the band, as propagation allows. QSLs go to K4TT's call book address.

INDIA, VU. Bernhard, DL2GAC, will be active as VU2BMS during the month of January. Activity will be mainly on 80 and 40 meters operating SSB and Pactor. QSL via CBA.

CAYMAN ISLANDS, ZF. Al, W4RIM, will be operating as ZF2ON from Grand Cayman Island between December 26 and January 1. He plans to operate mostly CW on 80, 40, 30 and 20 meters at the low end of band. QSL via KN4F.

QSL NOTE. 4X6FU is not the QSL manager for 4L1FL. Send QSLs for this one to 4X6UF.

SPECIAL EVENT STATION. Hungary will celebrate its 1100th birthday with special event operations from 0001z January 1 until 2400z December 31. Look for participants with HA1 to HA0 or HG1 to HG0 prefixes.

>know.

I cannot answer, but you now know this.

I cannot answer because you didn't give enough information.

>If a tranistor is driven into saturation and the collector is attached
>to a 1000 ohm resistor with 10 volts Vcc what is Vce?

Where is the emitter attached?

>If the same transistor is cutoff what is Vce?

Where is the emitter attached?

>Will the tranistor get hotter at cutoff, saturation or in the middle of
>its conduction range?

Where is the emitter attached?

Presuming the emitter is attached to ground in each circuit, the answers
are Vcesat for the particular transistor for as long as it can withstand
(10 - Vcesat) milliamps, Vcc and middle of the range for as long as it
doesn't self-destruct from heat.

4447. Re: The Origin of "HAM" (complete article)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-28 00:00:00 UTC
From: nmcewen@fohnix.metronet.com
Message-ID: <4bveno$me3@fohnix.metronet.com>
Source record: 233200

: Knowledgeable individuals from the American Radio Relay League (ARRL),
: and other radio historians, seem to agree that the terms "Ham" and "Lid"
: (an inept operator) both originated with landline telegraphy. A "Ham"
: was a show-off and a "Lid" was a telegraph operator so inexperienced, he
: had to use a pot or can lid to rest his telegraph sounder on to properly
: copy the code.

Don't forget the tobacco tin, shoved between the resonator and sounder
to amplify and give a distincitive sound. A nice way to help an
operator and recycle Prince Albert cans. you can change the sound by
opening or closing the "lid".

: As an interesting historical footnote, early telegraph operators may
: have been the first to experience the infamous curse of our
: communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome
: (called "Glass Arm" in those days, which encouraged the invention of the
: semi-automatic or "bug" key).

Actually, the sideswiper was invented 20 years before the bug and were
produced in large quantities, all in the name of curing "telegraphers
paralysis" as it was also called. It moved the motion from the vertical
axis to the horizontal axis. And with two contacts reduced the movement
by 50%. The bug, much later reduced the movement even more.

: (Larry E. McDonald, N6ZMB, wrote to point out another plausible origin,
: which doesn't necessarily contradict the ARRL version. The term "ham"
: may have been derived from "ham-fisted" or "ham-handed" to describe poor
: telegraph operators who were hired from the ranks of radio operators.
: Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who
: knows?)

One who is "ham-fisted" is rather enept at the motor skills regardless
of vocation or avocation. fists as agile as hams is the meaning of
"ham-fisted". I would venture to say "ham" came long after "ham-fisted".

Steve,

I'm glad to see you are as capable of misquoting me as you are
of misquoting Drew. If you are actually literate you know full
well that I never said I had classes in Hitler Youth but rather
suggested that hate mongers like yourself and Chris might want
to find such a group. With your attitudes I felt it would be a
better place for you to work with young people than in the
Boy Scouts. Perhaps you don't like being refer to as a hate
monger well then if the sheet don't fit don't wear it.

Hope to see you on the slopes, wear your call hat

Jerry

Message-ID: <gate.sBsugD1w165w@GRAFex.sbay.org>
Subject: HAM-server Information

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

Greetings to the group,

I believe David Letterman is an avid shortwave listener. His former director, sorry can't think of his name (not 'Morty' that's his producer), is also a shortwave fan. There was an article in QST a while back about the radios that his director has and the one he bought for Letterman fo Christmas.

Or maybe it is supposed to be G/B/L/T for Good Bacon Lettuce and Tomato?

By the way, does anyone know of any ham organizations that are strictly for heterosexual ham radio operators? I guess if THEY have to have THEIR own organization then we hetero's should have OUR own organization. Any homosexual hams that attack this concept will be labeled as HETEROPHOBES.

And if you visit the Thomas Edison museum in Florida you will learn that good old Edison started his career as a telegraph operator who then became frustrated with the slow speed and "invented" the iambic keyer. Then due to loss of hearing was forced into his second biggest money maker, a cement supplier for the Panama canal project.

There are all kinds of commercial RTTY sigs; different shifts, different modulation schemes. You really need to look at your TNC manual. Most are not really copyable, and if they are, will usually be enciphered.

Some TNC software offers a signal analysis mode which helps.

You will find also that a good many of the copyable commercial RTTY stations are sending idle text most of the time. How they make any money is beyond me!

A disclaimer: I'm just a casual RTTY user. I'm sure you will get more specific info from the RTTY hotshots! 73, VP2VBL.

This is not unusual. There is a sporadic-E peak around the winter
solstice. (Dec. 21) An even better peak occurs at the summer solstice
in June. Openings occur at this time of year no matter what the
solar flux.

This sounds like pettifogging to me. Perhaps some of it is because of Burt's usual antagonistic way of saying anything, but part of knowing the material involves making reasonable assumptions. If you're worried that the emitter isn't at 0 volts, you can still answer the saturation question. If you want to take into account the leakage current thru the load resistor than by all means do so. None of that changes the fact that cutoff and saturation are basic concepts, and that hams should understand them. In the 1995 Handbook they are discussed in the *third* paragraph of the BJT article (and no doubt that discussion is also plagued with ambiguities). Once again, this is *not* EE-level material.

Gerry ---

I purchased it, but can not say that I really used it. The
theory behind it is profoundly "silly". You are saying cutesey
things out loud, and tracing your finger in the air and over
"rough surfaces". I found that I needed to be quietly alone
when practicing, something that I found difficult to do. (It
was too humiliating having the yl and dog laughing at me!)

But, the thing that really gripes me is the poor audio quality
of the tapes. The "tone" of the CW is like nothing you have
heard before, nor will probably hear again! If I had the time,
I wanted to catch it on a storage scope and/or spectrum
analyzer and see just what makes it sound so awful.

All that aside, there are folks who swear by CodeQuick,
especially to get over the "hump" at about 11 wpm. For me,
what worked was CONSTANT practice with tapes I made myself from
a PC code practice program.

Special Bulletin 75 ARLX075
From ARRL Headquarters
Newington CT December 30, 1995
To all radio amateurs

SB SPCL ARL ARLX075
ARLX075 Ham radio on parade

The Edison Amateur Radio Network in Southern California will bring ham radio to the Tournament of Roses Parade in Pasadena January 1. The group plans to operate on 20 meters from the Southern California Edison parade float using the club's call sign, WB6UCD. Please note that this call sign was listed incorrectly in an earlier bulletin.

In exchange for the opportunity to operate from the float, and to possibly get some national publicity for Amateur Radio in the process, club members agreed to help build the float. In addition to parade day, WB6UCD will be on the air daily after December 26 as the float is under construction. Jim Walls, WB6WMW, will be at the controls January 1.

4480. This Week in Amateur Radio #144 (for air through 1/5/96)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-29 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <BZCk+ot.sanderman@delphi.com>
Source record: 233112

Here is a summary of news items covered on edition #144 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 5-Jan:
-
1. More Amateur Equipment Arrives at the MIR Space Station
2. Next SAREX Shuttle Mission Scheduled for January 11th Launch
3. AMSAT Sponsors Its Own Straight Key Night for New Year's Day
4. NY Court Ruling Against Prodigy Could Have Packet Implications
5. Great Britain Bans Calculators from Classroom Exam Use
6. "This Week" Moving to Telesat Canada Anik E2 Satellite
7. Upcoming Special Event Stations with George Bowen, N2LQS
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. Weekly Propagation Forecast
10. US Government Looks at Microchip Technology to Track People
11. "Amateur Radio Newsline" - Edition #959 from Los Angeles
12. Mars Surveyor Mission Promises "Ultimate DX"
13. "The RAIN Dial-up" from Chicago
14. 1995 Events in Review - "This Year in Amateur Radio"
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EST) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
courtesy of the Niagara-Mohawk Amateur Radio Club. The program is
repeated Mondays at 8:00 PM.
-
Due to the loss of satellite facilities, the service is being
carried exclusively on 160 meters and on the local 145.33 repeater.
The "Tech Talk Network" awaits the signing of a contract with the
new satellite uplink carrier. "This Week in Amateur Radio" will
return to satellite air shortly thereafter. Details will be posted
as conditions warrant. All affiliates are requested to contact the
producers for further information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,

at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

From: W6WWW@bbs.races.sandiego.ca.gov
Subject: RB411 Relay Stations Part 2/2

To: Emergency Management Agencies via Amateur Radio
Info: Communications Volunteers in Government Service
Info: Amateurs U.S. (@usa:Information), ACS, CAP, MARS, RACES
By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 411 OPS-Aspects Relay stations 2/2 release 1/1/96

Query: What factors do you look for in a relay station?

Answer: a mix of operational, technical and managerial
abilities, much as one would look for in a net control
station operator for high frequency operations.

Has the operator demonstrated good practices, such as these:
Shown an ability to handle multiple simultaneous calls without
confusion? Use staccato traffic, i.e., rapid fire cryptic words
that cut through noise and interference? Or is the person 'long
winded'? Have tone hearing ability; i.e., to recognize voices?
Is there a 'command voice'; and can it be used without being
heavy handed? What kind of 'presence' does the operator have?

Is there experience in emergency response? Is there dedication
to the level of service required for a relay station? Can the
operator develop assistants to provide relief and backup help
at his/her location? Are there physical or mental restraints
that can affect the operator? (consideration is required as
operation hours can be unexpected and extensive).

A relay station must be capable of a quick frequency change when
conditions warrant that action at the request of the NCS. This
may be to a different frequency on the same band or a change to
another band, such as to 160 meters from 80, or to 80 from 40, etc.

A relay station may need multiple antennas, emergency power source
and several radios, as well as fax, packet, and other systems, as
well as a pager.

Of course, one could say that in an emergency any station could
be a relay station. However, the above aspects are worth

considering when selecting a relay station. Not all of the factors will be found in one operator, but at least have them in mind when you make a selection.

[This two-part series was edited from an article originated by Howard Shepherd, W6US, Manager McArthur Relay, Alternate NCS, California Emergency Services Net, State of California Auxiliary Communications Service.]

I like to play with and refurb older synthesized radios.

I am looking for ICIR, Cubic, Atlas, Swan (MX), Signal One, and any other
older synthesized solid state or hybrid radios and the accessories sold
with them. I'm also looking for any literature or photocopies.
I'm not a 'collector' so the stuff needn't be pretty. I prefer dead as
I like working on em and I can more easily afford dead :-)

I'll trade $, computer parts, other radio stuff, radio repair (on the
ones I like).

I am also looking for a Mosley CM-1 receiver (tube radio)
and anything by Geloso or American Geloso (all I know of theres is tube
but if you know more, talk to me :-)

Message-ID: <4c1g5b$476@sanews.uswc.uswest.com>
Source record: 233117

in a msg Mike Miller wrote:
:>My HTX-202 occasionally flashes the error 2 msg. This happens more often
:>when I have it hooked up to my TNC, but it has happened once or twice when
:>not hooked up to the TNC. If I turn it off, the error msg usually doesn't
:>come back, at least not immediately. Also, I've observed that switching
:>from a power supply to a battery pack makes the error code go away. I've
:>owned the HT just over 1 year, of course. Anyone with similar problems?
:>Advice?

In your msg you didn't state whether you were using an external antenna, so I am going to assume that you are using the rubber duck that came with the HTX-202. When you use a power supply, make sure that you use an external antenna. I have had this happen when using a 8.4v BP-8 battery pack. The radio doesn't like to have to much power going out through the rubber duck and an error 2 msg is the result. If you are using an external antenna, (and have the exdended warranty) I would take it back to R. S.
hope this helps

The Gwinnett Amateur Radio Society (GARS) is sponsoring an symposium on January 13. The symposium will be held
at the Gwinnett Justice and Administrative Center in Lawrenceville, GA and will begin at 9:00 A.M. There will be no
charge for the symposium and all interested amateur radio operators and those interested in amateur radio are invited to
attend. Featured speakers for the symposium will be Bill Wall, KC4UZ, President of Antenna Mart and Neil Sulmeyer, AE6E.
There will be discussion sessions followed by Q&A sessions.

The Gwinnett Justice and Administrative Center is located in Lawrenceville, GA on Langley Drive just off U.S. 29. Talk-in
will be available on the GARS 2 meter repeater on 147.075 MHz (+). For futher information contact Johnny Fearon, W4WKP via
email at jfearon@intergate.net or myself at ichapman@intergate.net

Hope to see you there.

From: paulj@pncl.co.uk
Message-ID: <4bvbgj$1h8@eiger.pncl.co.uk>
Source record: 233212

We are interested if any of you have heard of the jones key which we make and wondered if you could give a little feedback on it. What do you think of it ? Where did you get it from ? How did you hear about it ? that sort of thing.

What i am interested in is whether there is enough interest on the internet to justify the time in creating a Jones key home page on my local server and maybe set up e-mail ordering and information return, perhaps some after sales support via e-mail etc etc. I have lots of ideas but i am not sure if there is the demand or even the interest out there.

Over to you

Regards

Paul Jones

When buying New/Used equip from Frank be sure you
perform an operational check on the equip. Be sure
and verify that ALL of the options that he says are
"installed" are actually in the equip in question.

I bought a Icom V68 HT in which he told me the CTCSS
tone board was installed. I took his word as a fellow
ham. To my dismay, I later discovered that NO CTCSS was
installed!!!

When I contacted Frank he was very rude and told me that I
should have known better and that CTCSS was an option, not
standard. I knew that it was an option and specifically
asked if it was installed as the radio was useless to me
without the option. He told me it was installed!!!

Franks told me that If I wanted any refund that would have
meet him in Burnaby BC, a 6hr drive from my location. Not much
of a solution, eh?

So,take this into consideration if you are thinking about making
a purchase from Frank.

Just to add my 2 cents worth...

We live in Austin. I have bought 3 HTs from Austin Amateur Radio Supply as well as the usual fare of cables/coax/connectors/books. My experience has been that one of their staff members is friendly and the others are 'in business'.

My wife surprised me this Christmas with a *pair* of Cushcraft A270-10S beams. She bought them at AARS. She also told me that she never wants to go there or let me spend another dollar there again because no one was WILLING to help her make her selection in any way. She is not a ham, but she is not a dummy either (she has a Master's in Applied Math...)-She just didn't know enough to make an informed selection. She DID know that I wanted to work satellites on 2m and 70cm and that I wanted a pair of beams for circularly polarized signals.

It would seem good business to at least make suggestions or talk about the options available. They didn't even tell her which manufacturers or models would meet her stated needs. They told her that she would have to give them a part number before they could "help". She was in person in the store twice! They didn't even offer her a catalog to help.

These guys are in a business which 'feeds' on a hobby - pure and simple. An eager to assist - let's have fun - type of attitude would seem to be a good approach. Maybe they need competition closer than Oklahoma/Ohio/etc.

...for what it's worth...

While I have only had one experience with the Austin store that was disagreeable (buying a FT530 a couple years ago, I got a "They came in the back door and went right out the front door...no, I don't know when we're getting more, but they're spoken for anyway"--very rude), I have met so many people who have had bad experiences that I'm inclined to believe it. Yes, one staffer is a really nice guy, and the other one?...well...doesn't seem to be.

By the by, there *is* competition closer: K-Comm in San Antonio is a really nice store; the atmosphere is very relaxed and friendly, the guys there are more than happy to help you with anything you might need help with, even if you're not buying today, thank you very much. You can ask questions on equipment, and you'll get straight answers--and if they don't know, they'll tell you that, too. Real nice guys there; definitely worth the drive.

ICOM IC-706 HF/VHF AMATEUR RADIO TRANSCEIVER
Product Review, Hints and Tips, and Modifications
As Of: December 28, 1995
by Randall Rhea, KG0HW

OVERALL IMPRESSION

"Too good to be true". This was my understandable reaction to Icom's announcement of the IC-706 amateur radio transceiver last summer. It looked like my dream mobile rig: very small size, detachable face plate, all HF bands, FSK, 6 meters with 100 watts ... AND 2 meters, all in one rig? It sounds too good to be true, but after using this radio in my car for about a month, I can tell you that this radio is real. Although the rig is not without its faults, Icom has produced an innovative masterpiece. The rig does just about everything as advertised. It is an easy-to-use radio that replaces several other radios that I was operating in my car.

Over the Christmas holidays, I took a couple of long car trips here in Texas. The 706 was installed under a car seat, leaving plenty of room for luggage and packages. (Do NOT block the top of the rig. Leave room for air circulation. The rig gets VERY hot when transmitting!) The face plate was installed just below the dash within easy sight when driving. I used headphones, so my wife and daughter could listen to CDs while I was working DX. The headphone plugged into the face plate. I used a 7-foot whip mounted on the trunk of the car tuned for the SSB portion of 6 meters, my favorite band. The radio was a pleasure to use, even while driving.

During a nice opening on 6 meters on the evening of December 27, I worked several new grid squares in the midwest and Arizona. I also worked North Dakota for the first time. I was able to work a station in Mexico City quite easily, despite the pileup. That 100 watts sure helps. (I previously used a 10-watt rig.) The sensitivity of the receiver, although not quite what the "pros" would want, was quite adequate. Noise from the car engine was only a minor problem; the noise blanker was effective for SSB.

During the trip I also listened to a football game on TV channel 2, listened to truckers' traffic reports on CB channel 19 (27.185 MHz), worked a couple of 10m stations during the sporadic E opening on December 27, worked a couple of 20m stations, listened to WWV on 2.5, 5, and 10 MHz, eavesdropped on some interesting baby monitors and cordless phones on 49 MHz, listened to NOAA weather forecasts on 162.55 MHz, monitored some aircraft traffic, and did some ragchewing

on 2-meter repeaters. Not bad for ONE radio!

PRICE

I paid $1249 for mine at Tucker Electronics in Dallas. They told me that they have sold about 200 of them in six weeks, making the IC-706 their best selling rig of all time. They are getting them from Icom in lots of 20 and are having trouble keeping them in stock.

Prices for accessories are pretty high. There is little profit margin in the box, so they make up for it with high accessory prices. The cable to allow for front-panel detachment is $48.

UNIQUE FEATURES AND INNOVATIONS

See

http://www.icomamerica.com/icom/amateur/hf/#IC-706

for a list of features.

* The smallest HF rig on the market (similar in size to the Kenwood TS-50)

* Detachable face plate with a jack for a speaker or headphone. The mic plugs into the face plate using a plug similar to a modular telephone plug. (A spare plug is included.) The cable to allow for this detachment costs extra.

* Full HF/VHF transmit coverage from 1.6 to 54 MHz and 144-148 MHz (the rig transmits only on the ham bands out of the box, but an easy modification unlocks the transmitter, see below)

* General coverage receive from 50 KHz to 163 MHz (requires modification, see below) Rig receives up to 200 MHz but with poor sensitivity above 162 MHz even with the modification. You will be able to receive: longwave, AM broadcast band, shortwave broadcast, all amateur bands in all modes from 160m to 2m, FM broadcast band (wide FM), aircraft (118-136 MHz AM), VHF from 30 MHz to about 162 MHz, US TV channels 2 through 6, NOAA weather at 162 MHZ.

* 6 meters and 2 meters, all-mode

* 100 watts on HF and 6 meters (10 watts on 2 meters)

* Innovative, easy-to-operate menu system. It becomes quite easy and natural to use after reading the well-written manual for about an hour. (In contrast to my Yaesu FT-470 HT, which I still cannot figure out.)

* The manual is very well written, with lots of easy-to-understand diagrams.

* Simple, but useful and configurable band scope. (Previously available only on very expensive rigs like the Icom 781.) This

allows you to examine nearby frequencies for activity.

* Split frequency operation appears complicated at first, but the rig's "quick split" mode makes it fast and easy.

* Built-in electronic keyer at no extra charge. The Up/Down buttons on the mic can be used as a paddle. This has rejuvenated by interest in CW. I worked a couple of slow CW stations on the novice portion of 80m, which made me remember how fun CW is.

* FSK (Nice feature for this price range)

* DTMF and programmable offset for repeaters and split frequency work

* Good audio reports from contacted stations. A station on 3.85 MHz reported "a very good signal for a mobile". A 2m FM station reported "very good audio ... so that's the 706 I've been hearing about."

* Works very well with the AH-3 antenna tuner. This is the Icom HF (1.8-30 MHz) random wire tuner that worked with the 725. The tuner is mounted under the trunk lid of my car with cable ties. It can also be mounted outdoors. It will tune any 8-foot whip or wire for any HF band. (You need 40 feet for it to tune to 160m.) You can press a button to enable the tuner, or the tuner can fire off automatically if your SWR is too high. With my 7-foot 6-meter whip, I can tune to any HF band above 3.5 MHz. That means I need only one simple antenna for HF and 6m.

* 100 memories that store frequency, split offset, mode, and FM tone.

* Two antenna connectors: one for HF/6m and one for 2m. The connectors are switched at 60 MHz.

* Jacks for remote speaker and/or headphones on both the face plate and the back of the rig.

* Multifunction meter: S meter, SWR, relative power output, ALC.

DRAWBACKS/FLAWS

* Extended VHF receive requires modification (see below).

* Poor sensitivity above 162 MHz.

* Noise blanker does not work on AM. Very irritating pulse noise on AM while the car's engine is on. The blanker works well on other modes (except FM, where it is not needed). Not good for listening to AM while driving. A rather serious flaw in my opinion, since my $40 CB has a noise blanker that works well.

* Poor QSK (full break-in) capability. Not recommended for high-speed CW operators who want QSK. Use semi-break-in instead.

* No CW narrow filter. You can install one as an extra-cost option or use an external CW filter or DSP unit.

* The built-in speaker provides surprisingly good audio for its size, but you will probably want to use an external speaker. The speaker can be connected to the face plate or to the rig itself.

* Automatic repeater offset is not programmed into the rig. You need to program -600 or +600 yourself through the menu system. This is not a problem if you store your favorite repeaters into one of the 100 memories.

* The S-meter is inaccurate below S9. Above S9, it is quite accurate.

* High prices for accessories (typical of just about all other vendors)

* The AH-3 antenna tuner is shipped with an unshielded cable, which picks up a lot of auto engine noise. You need to make your own shielded 4-wire cable. The AH-3 also blocks signals above 54 MHz. It also only works for HF, not for 6m or 2m.

* Expect performance and receiver sensitivity similar to other rigs in this price range. This is a low-end rig in terms of price. For price vs. performance, this is probably the best amateur radio of all time. However, it will not outperform your $4000 rig. You probably won't win contests with it. You will have a lot of fun and own a nearly ideal rig for mobile work.

HINTS AND TIPS

1) Take time to read the manual. The menu system will be bewildering unless you read the manual. One you get used to it, you will find the rig to be amazingly easy and fun to use.

2) You need to set the mode to wide FM to receive FM or TV broadcasts. Tune to the station, press the MODE key until the front display shows FM, then press and hold the MODE key for 2 seconds. WFM will appear in the display, and you will hear the station with nice audio.

3) Don't use the noise blanker on AM. It will not be effective and may distort your audio.

4) Don't use the QSK feature.

5) The rig gets very hot while transmitting. Keep the top of the radio clear to allow air circulation.

MODIFICATIONS

WARNING: Improperly performed modifications can severely damage your radio. I have performed these modifications successfully, but I offer no guarantee or warranty for them. Proceed at your own risk.

TOOLS NEEDED:

1) Small philips-head screwdriver 2) Tweezers 3) Magnifying glass 4) Low-wattage (15 watt) soldering iron 5) Long-nosed pliers

MODIFICATION 1: Enables out-of-band transmit for 1.6 MHz to 54 MHz. This does not enable extended VHF transmit; a modification for this may be available soon. This does not enable AM or FM broadcast band transmit. Your memories will be cleared after this modification, since you need to reset the CPU.

1) Open the top of the radio by removing the 3 top screws and 2 side screws. Look at the radio from the with the front panel facing you. screws.

2) Gently pull up the speaker and set is aside without damaging the speaker or the wires that attach it to the rig.

3) Note the silver rectangular box near the middle of the PCB marked something like "9 MHz SSB Filter".

4) Move your eyes up from this filter toward the back of the radio. Just before you get to the "D 108" marking, you will see two tiny diodes, two blank spaces, and one additional diode. They look something like this:

D108

[XX] [XX] [ ] [ ] [XX]

Remove this diode ^^^^

5) The second diode from the left needs to be removed. I did this by crushing it with long-nosed pliers. You can also heat it with a low-wattage soldering iron and pull it up with tweezers. Be sure not to damage the other diodes or the PCB. Be sure that you don't apply too much heat, since the heat can damage the PCB and the other diodes.

6) Re-assemble the radio. Reset the CPU by pressing and holding down the UP and DOWN buttons on the front panel and pressing POWER.

MODIFICATION 2: Enables more sensitive transmit above the 2 meter band. (148 to about 162 MHz; after that, sensitivity drops off.) Keeps sensitivity for the FM broadcast band.

1) Open the top of the radio by removing the 3 top screws and 2 side screws. Look at the radio from the with the front panel facing you.

2) Note the silver rectangular box near the middle of the PCB marked something like "9 MHz SSB Filter".

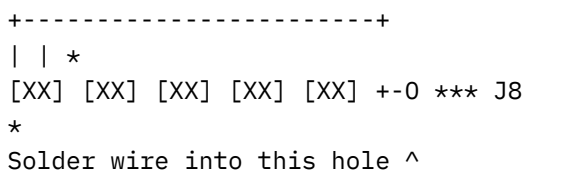
3) Move your eyes up from this filter toward the back of the radio. Follow the ribbon cable up. Notice a wide white connector with several colored wires in it on the back of the PCB.

4) The fourth wire from the left is a yellow wire. Cut this wire. Rather than cutting it, you can remove the connector, stick a paper clip in the side of the connector under the wire, push it in, and pull the wire out. Be careful not to remove the other yellow wire.

5) Re-insert the connector back to its original place on the PCB.

6) Open the bottom of the radio. You will again need to remove 5 screws.

7) Look at the radio with the front panel facing you. Note 5 tiny transistors behind the MENU button. Follow the trace from the middle transistor to a hole just to the left of jack J8.



8) Solder a small wire into this hole. Be careful not to apply too much heat; use a low-wattage soldering iron. Be careful not to damage the PCB or the grey cable coming out of J8. Use a magnifying glass.

9) Run the other end of the wire you just soldered to the front of the radio and attach it to the yellow wire you just cut.

10) Re-assemble the radio.

- END OF DOCUMENT -

The cheapest and easiest way is to buy any kind of insulated wire (the cheap stuff will work fine) and string it around the room or on the roof. Strip one end of its insulation so only the copper wire shows, then attach this end to the antenna of the radio, and you will get greatly improved shortwave reception.

Another option is to buy an active antenna. This is a small box with a telescoping whip and some sort of tuner box. You can get one at Radio Shack or one of many stores that sell shortwave radios.

I have heard of a radio that is powered by a windup device.
^^^^^^
It is for the AM Broadcast band and is being made in South Africa.
Has anyone got any details on this device. It does have potential.

Manufacturer?
Cost?
Details?

Absolutely - I had one, and remember it with great fondness. You've got a great attic - my junk box goes back a long way, but not *that* far - my memories have no trouble going that far back, though. I also remember poring over Allied & Lafayette Radio catalogs for hours and hours, comparing the attributes of all the neat stuff I couldn't afford as a kid - I pretty much had those catalogs memorized.

****

This reminded me of a conversation my brother and I had about this.
He is a dyed-in-the-wool Mac kinda guy, me, IBM.

So I offered the same comment in a telephone conversation with him one
day, "Look, Roger, Mac only has 5% of the market. End of story!"

His reply, not missing a beat, "Yeah Dick, you're right... It's just
about the same percentage of cream in milk!" :-)

It's hard to win these discussions with a brother like that. :-)
Anyway, if Curt's 8% is more accurate, then I guess the cream
analogy is still about right. Anyone know the *real* percentage,
and how that percentage is measured? Dollars, on/off switches sold?

Thanks

One place to start would be your local amateur radio store, there are usually posts that show when and where local clubs hold their meetings and a list of local testing sessions. While at the ham store ask questions and possibly pick up study material. Go to a local ham club meeting, people in our club are always ready to help someone get into ham radio.

I hope this helps.

W A R N I N G contains material for 6 year olds and older.

Now that Christmas is past and New Year is fast approaching, maybe it might be good to rellect on the following bit of scientific information:

IS THERE A SANTA CLAUS?

As a result of an overwhelming lack of requests, and with research help from that renown scientific journal SPY magazine (January, 1990) - the author is pleased to present this scientific inquiry into Santa Claus.

1) No known species of reindeer can fly. BUT there are 300,000 species of living organisms yet to be classified, and while most of these are insects and germs, this does not COMPLETELY rule out flying reindeer which only Santa has ever seen.

2) There are 2 billion children (persons under 18) in the world. BUT since Santa doesn't (appear to) handle the Muslim, Hindu, Jewish and Buddhist children, that reduces the workload to 15% of the total - 378 million according to Population Reference Bureau. At an average (census) rate of 3.5 children per household, that's 91.8 million homes. One presumes there's at least one good child in each.

3) Santa has 31 hours of Christmas to work with, thanks to the different time zones and the rotation of the earth, assuming he travels east to west (which seems logical). This works out to 822.6 visits per second. This is to say that for each Christian household with good children, Santa has 1/1000th of a second to park, hop out of the sleigh, jump down the chimney, fill the stockings, distribute the remaining presents under the tree, eat whatever snacks have been left, get back up the chimney, get back into the sleigh and move on to the next house. Assuming that each of these 91.8 million stops are evenly distributed around the earth (which, of course, we know to be false but for the purposes of our calculations we will accept), we are now talking about .78 miles per household, a total trip of 75-1/2 million miles, not counting stops to do what most of us must do at least once every 31 hours, plus feeding and etc.

This means that Santa's sleigh is moving at 650 miles per second, 3,000 times the speed of sound. For purposes of comparison, the fastest man-made vehicle on earth, the Ulysses space probe, moves at a poky 27.4 miles per second - a conventional reindeer can run, tops, 15 miles per hour.

4) The payload on the sleigh adds another interesting element. Assuming that each child gets nothing more than a medium-sized lego set (2 pounds), the sleigh is carrying 321,300 tons, not counting Santa, who is invariably described as overweight. On land, conventional reindeer can pull no more than 300 pounds. Even granting that "flying reindeer" (see point #1)

could pull TEN TIMES the normal amount, we cannot do the job with eight, or even nine. We need 214,200 reindeer. This increases the payload - not even counting the weight of the sleigh - to 353,430 tons. Again, for comparison - this is four times the weight of the Queen Elizabeth.

5) 353,000 tons traveling at 650 miles per second creates enormous air resistance - this will heat the reindeer up in the same fashion as spacecraft re-entering the earth's atmosphere. The lead pair of reindeer will absorb 14.3 QUINTILLION joules of energy. Per second. Each. In short, they will burst into flame almost instantaneously, exposing the reindeer behind them, and create deafening sonic booms in their wake. The entire reindeer team will be vaporized within 4.26 thousandths of a second. Santa, meanwhile, will be subjected to centrifugal forces 17,500.06 times greater than gravity. A 250-pound Santa (which seems ludicrously slim) would be pinned to the back of his sleigh by 4,315,015 pounds of force.

In conclusion - If Santa ever DID deliver presents on Christmas Eve, he's toast now.

I did mis type transistor.
You mean as in EE you still have not covered enough to answer the
question AND you have a ham license?

The comments are getting dumber and dumber.
How can it ever be more than 10 volts.
Might be less than 10v? If saturated that is an understatement.
The answers I got by direct E mail may not have all correct but
they were not out in left field.

There is no longer a "Station Location" field on the form 610. In
fact, I have the last 2 issue dates of 610 and neither one require
anything but a mailing address. No such thing as a separate station
location any longer.

A few years ago I spent MANY hours trying to decipher the commercials.
I programmed special software to determine what word length they were
using, which was mark/space, baud rate, etc. I counted character
frequencies and constructed cross tables, etc. I tried MANY things.
Bit inversion (constant, but controllable bit) did not help me. It was
an interesting project - I enjoyed the snooping, but got nowhere.

Bottom line: I concluded that my intelligence level was no match for
whatever encryption system they were using.

Maybe one of the commercial guys involved in that field will tell us
just what encoding is used. I am still curious. Software for my PK232
provides for bit inversion decoding, which sort of suggests that is
how it is encrypted, but I don't think it is that simple.

If the transistor is a npn it might be less than 10 volts. If it's a pnp, it might be more than 10 volts. I can't see where it matters much if by definition the transistor is saturated. Same goes for the other examples...

4540. FCC On Vacation?

Newsgroup: rec.radio.amateur.misc

Does anybody know if the recent US Gov't shutdown has caused Gettysburg to stop issuing licenses? Last entry I can find for the QRZ license site is an effective date of 16 December, and those folks are generally up to the date within 24 hours or so.

In particular, we have a couple of dozen folks that took their exam on the 16th and we haven't been able to find out a thing.

Suppose, just suppose that Congress and Slick Willie keep butting heads for a few months. Does that mean that IF the FCC is shut down that the people who took their exams in good faith expecting their government (to whom they pay taxes IN ADVANCE for services) to fulfill their part of the bargain then have the right to pick some off-the-wall call sign and get on the air? Illegal? Isn't the government not keeping the faith with the rules they set up themselves all part and parcel of the same illegal act?

Use a DAC (digital-analog converter) to a motor speed IC. I remember
Phillips/Signetics made a couple.

A brute force way would be to drive the DAC into a power OP AMP which
drives the motor.

I worked for a company where we were doing data logging at x/2 speed.
We had lots of problems with cassette drag and mechanism problems.
Wow and flutter are really amplified at low speeds due to friction.

4548. FCC Database Question

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-30 00:00:00 UTC
From: LVScott <Lvscott@cris.com>
Message-ID: <Pine.SUN.3.90.951230081726.29151A-100000@mariner.cris.com>
Source record: 233128

Is there any way to find out the station location of an amateur radio station by looking up the callsign instead of just the mailing address? I realize you can get the mailing address from things such as the QRZ CD-Rom but since an amateur license contains both the mailing address and station location address and since they may be different, I was wondering if any database is available to find the station location too.

Two words SOLAR CYCLE

which we are rapidly approaching the bottom of...(hopefully crashing
sometime next year). Dead is in the eyes and ears of the beholder. For
DX'er types (like myself), yes 10 is 10 as far as most of the world.
Occasionally, South America will chime in, but for the most part, 10M is
great for local (up to 300-500 miles) contacts. After several years of
trying, I finally got to confirm RI, NH and VT, which is quite hard
consdiering my location in NNJ.

It'll get better

WINDOWS'95 UPGRADE CD AND MANUAL
==========

My Cardiologist office has merged his 3 offices with 2 others and has purchased all new computers and upgraded software for all the offices. His software provider will not guanrantee the perfomance under Windows'95 so he is not upgrading past Windows 3.1

He has given me all the upgrade packages that were sent to him after his purchase. Obviously I can only use 1 package.

I have for sale the extra Windows'95 Upgrade Kits. These are CD-ROM Upgrade kits. They are sealed Microsoft Upgrade kits with the Microsoft Certificate of Authenticity, holographic security label, etc.

The price is $ 50.00 including shipping.

Contact Bob Reed, WB2DIN, at (908) 363-2724 any time until 2300EST daily.

A similar problem occurs in the Dallas area, where we enjoy the presence of Texas Towers, a store where money talks. If you come in the door with cash in hand, they could be nice, well they might. Primarily a mail order outlet, they are used to taking orders and filling them. If I walk in and know exactly what I want, yes they will sell it to me, and tghe price won't be bad. But God help me or anyone who should have a question or ask for an educated opinion. Truth is, they don't have an educated opinion.

Just 20 miles across town in Garland, and closer to my house is Tucker's. Almost everything you could want with friendly hams offering positive assistance. Any surprise they are cconstantly expanding their store?? Folks in North Texas or Southern Oklahoma, you should try Tuckers before going anywhere else. Real nice folks, owned by hams, and dedicated to helping people and working deals. No, I don't work for these guys, just a happy consumer, and have never heard a bad story...

Re: FCC Shutdown

Jim is correct. I took my test on the 10th of December and passed my General after an absence from ham radio for 38 years. I have called the FCC several times and have been told that due to the shutdown, license processing has ceased. The FCC stated that I should check in about a week after everyone goes back to work.

nope..the FCC quit taking station location data some time ago. seemed that the jammers never bothered to record their station locations and the formal notification was going to go through the mails, so all they had to have was the mailing address...some older databases may show a station location entry that's probably still true for most people today...but it's not in the newer datasets and there's no requirement any longer to file information on station location.

>off-the-wall call sign and get on the air? Illegal? Isn't the
>government not keeping the faith with the rules they set up themselves
>all part and parcel of the same illegal act?

who promised license turnarounds in 14-21 days? not too long ago it was taking
3 months or longer to get a license back. those folks from 12/16 got no complaint
yet...

it's been a while since some of the government's programs have come up for
serious review...my bet is that the congress will come up with a plan acceptable
to both parties and pass a veto-proof bill to Bill the P...he could veto it but it's
not like he doesn't need congressional friends right now with things like the
whitewater stuff heating up. (been following a discussion on an online service
and one guy's been comparing Nixon's unwillingness to turnover the tapes to
Clinton's unwillingness to turn over the files...i guess if HRC worked on Watergate
that might account for it...8))

now then, had the temporary license idea been debugged and put into place
during the last time we had long delays, we'd already have a system in place
to handle this sort of nonsense (further showing that a government shutdown
has less and less immediate effect on the general public..).

I'd have a go at using pulse-width modulation. See if you can get a hold of a copy of Don Lancaster's CMOS Cookbook. He has a simple circuit in there he describes as being useful for a caver's lamp that oughta do the trick, uses just a couple of gates and a power FET at the output end, which makes it real easy to scale it to your needs.

4570. Convers Node

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-31 00:00:00 UTC
From: troch@lonestar.texas.com

Howdy,

The wormhole that we, the Clear Lake ARC, are running has been
connecting to a Moscow Convers node for the past few months.
Unfortunately we have been having the worst of time lately connecting
to Moscow. What I am looking for is another converse node
(preferrably here in the states) that we could connect to.

If you are willing to allow us to connect to your node please drop me
a line.

Thanks!
73,
Rod

I had the opportunity to visit AARS in 1991 while attending school at Bergstrom Air Force Base in Austin. Each time I visited the store was a pleasant experience.

It is also my experience that sales people "have to be perfect" in every way for SOME hams and when or if one has a bad day/week (sales person or customer for that matter) there are those few who, either via packet or internet, paste their displeasure on the monitors of those who partake of these modes.

There are some hams who actually go way out of their way to find something wrong with a ham sales establishment and end up amplifying the little things to many times their actual importance or un-importance...and they can't wait to share their negativism with the rest of us.

We are all the sum of our experiences in life... and some of us have had a better life than others. But, just because the sales people don't stand at the door in tuxedos to greet everyone with hors d'oeuvres and free gifts and the customer's name up in lights doesn't make the place a bad place to shop. After all, if EVERYONE interpreted their visit experiences as that bad....these places wouldn't be in business for very long.

Sales people are human too...just like next guy. If one has a genuine bad experience, call the owner or manager and let that person know of the experience? ...Or, run home and blast way with your keyboard phaser?

just my two cents worth...

Some people would argue that it's happening all the time....it's
called Windows 95.

Seems to me like there's always more cost involved in a Mac. Not just
the system itself, but the accessories that you would get later. Is
this the case, or just my imagination?

I may be purchaseing a Jeep Grand Cherokee Loredo in about 6 months, and
was wondering if there were any known RFI problems with it?

I am aiming for a new model, but may purchase a used one.

I'm primarily a VHF/UHF user, but HF is not out of the question.

I'm also considering a Ford Bronco or Explorer. Any recommendations
about the SUV (sport/utility vehicle) purchase would also be appreciated.

I am in the Boston, MA area - I am interested in these SUVs primarily for
the Winter and snow.

73, and Happy New Year to all!

Source record: 233040

Hoo, boy! Just got to this little item. Since I **am** a dedicated contester, I know whereof I speak. Most of us are in more or less the same physical condition as the population at large; contesters are as representative of the general ham population as any of the other special subspecies. However...

I suggest you take a look at a typical contest station sometime. You'll see fairly tall towers with lots of pretty good size antennas on them. Who do you reckon erects the towers, climbs them to install the large antennas, and then does the necessary maintenance? This doesn't happen by itself, you know. Contesters don't just use their stations; they build and maintain them too. Try climbing a 100-foot tower sometime. You'll find it's an **excellent** aerobic workout. Do it enough and you can't help but be in some sort of shape.

As for the physical endurance required to operate a contest, I suggest that you try sitting down and running contacts at a rate of 100+ per hour on CW or 200+ per hour on phone for about 9 hours straight. Then come back and tell me it's physically easy. Just because something **looks** easy to an ignorant observer doesn't mean it is!

73 & Happy Holidays,
Randy, W8FN

Rick, you sent your "subscribe" request to the list itself, not to the listserver which handles subscriptions. This happens quite often.

Instead, send your request to:

listserv@lehigh.edu

with the following text in the body of the message:

subscribe QRP-L YourName

I believe that is the correct format; if not, e-mail me and I will recheck it.

I think you will enjoy this *very* active list.

Bushlong whined:

I was wrong. Burt really is a jerk. He is small-minded, opinionated,
bitter, angry, unwilling to change, and the epitome of the expression:
"Those that can, do; those that can't, teach."

Burt says:
Jerk? What a deep vocabulary you have.
I do do. I am a vocational teacher which requires 6 years doing.
You are wrong again.

Bushlong whined:
Insisting on knowledge of how the radio works, at the transistor
level, is like requiring someone to know how the computer works, at
the same level, before they post to the newsgroup. (Oddly enough, that
would prevent burt from posting again, as he failed his own
electronics test; more on that in a moment).
Burt says:
I do not insist on technical competency among hams but a few with such
knowledge might fit into what hams are supposed to know

Bushlong whined:
His answer was that if I "had a week" he could tell me. I think that
if he can only come up with a week's worth, he should go back and work
some more. I've bored *close* friends to death, friends who were
hams, with *months* worth of stuff!
Burt said:
You are such a find with your months of self praise.

Bushlong whined:
The sad fact is that I haven't lived my life so that I could
"beat burt". But after having done it without even trying, my
conclusion is that it's no big achievement. It reminds me of the
unfortunate expression, "it was like kicking a retard."
^^ ^^^ ^^^^ ^^^^^^^ ^ ^^^^^^
Burt said:
Putting me down raises you up?

Bushlong whined:
Late update: he sent me some hate mail this morning calling me a liar.
This was after he said he wasn't going to send me any more email.
"Hey kettle, this is burt! You're black!"
Burt replied:
I did say you lied but where did I say I would not send you any more mail?
Methinks you are taking things out of context.

Bushlong whined:
Bottom line: burt failed his own challenge, and by his own
proclamation, he is a "typical ham" who is ruining the hobby. He is
unreasonable, pedantic, stubborn, and does nothing to make the hobby
better. He will follow up to this posting and make some personal
insults about me, although he has never met me, and knows nothing
about me. Just watch.

Burt said:
Actually you who is full of insults. My only insult is" Bushlong whined:"

Bushlong whined:
He probably went off and had someone measure the voltage for him and
is trying to come up with a good answer why he was wrong. The only
answer is that he was wrong.

Burt admitted:
You are right re: saturation voltage, I was wrong.

Burt Fisher

The following is a QST

Police in Moraine, Ohio arrest a CB operator who they say was a
nuisance to his neighbors. But did the police overstep their
authority by going into federal territory? Local hams are saying yes
and they fear that they will be next. Also, a Christmas gift from
mother nature. Find out what it was on an extended year end Newsline
report number 959 coming your way right now!

(*****
OHIO CBer JAILED FOR TVI

An Ohio CB operator has been arrested for causing TVI to a
neighbor.
Local police say that they will do the same to anyone who causes
interference to consumer electronic equipment. This includes ham
radio operators.

Saturday night December 9th a CBer in Moraine, OH got a visit from
the local police. Steve Holbrooks radio was apparently causing
interference to his upstairs neighbors tv set. Holbrook was advised
of the problem, which according to upstairs neighbors, Michael Price
and Tina Hustach, had been going on for at least two months. For
whatever reason, later that night Holbrook got on the air again and
while talking referred to his neighbors in uncomplimentary and
socially unacceptable terms. What he didn't know was that Michael and
Tina were recording what came over their tv and they decided enough
was enough. Police were called again and Steve Holbrook was arrested
on a charge of interfering with a public service. A third degree
felony for which there was no bond.
On Monday the 11th Holbrook was released when the county prosecutor

decided not to press charges. However the city of Moraine may decide
to press charges of their own and Mr. Holbrook is scheduled to appear
in Moraine Mayors Court on December 21st. W8ILC is the interference
chairman of the Dayton Amateur Radio Association and has been
contacted by Montgomery County Sheriff Gary Haines about the
situation. Ron was asked to provide the sheriff with information
concerning FCC rules about interference and advice on what would and
would not be appropriate in a future situation.

"I did ask the Moraine City Police Department at the time I called
them, I said if this would have been an amateur radio operator causing
the interference, would you have done the same thing? And their
answer was yes." W8ILC

In a related item, the DIAL Amateur Radio Club in Middletown is
following this case and expressed concern about its affect on the
amateur community. According to information given to this reporter,
someone in the club contacted the city law director and was told that
in a case of interference with consumer products it is the
responsibility of the individual causing the interference to supply
the needed filters to rectify the problem. Efforts among the local
amateurs are under way to determine what can be done to educate public
officials about how to handle TVI complaints in the future.

Police have confirmed that they have Price's tape recording but
refuse to reveal what was on it. They say that Moraine prosecutors
would review the charges against Holbrook and decide how to proceed.

(*****
ARRL ASKS FOR LESS SPREAD SPECTRUM RULES

The ARRL has asked the Federal Communications Commission to relax
its

spread-spectrum regulations to give Amateur Radio more opportunity to contribute to spread-spectrum development. The League's request seeks relaxed restrictions on spreading sequences and greater flexibility in the use of spreading modulation.
The petition proposes that the FCC permit brief test
spread-spectrum
transmissions and allow international spread-spectrum communications between amateurs in the U.S. and those in countries that permit their hams to use spread-spectrum techniques. The current rules allow only domestic communication. The petition also asks for automatic power-control provisions to insure use of minimum necessary power to conduct spread-spectrum communication and limit the potential for interference to narrowband modes.
The petition does not ask for any changes in frequency restrictions

on Spread Spectrum emissions, the 100 watt power limit or logging and identification requirements.
In urging the FCC to adopt the changes, the League's petition calls

the proposals the minimum necessary changes in order to foster Spread Spectrum experimentation in the Amateur Service.

(*****
2300 MHZ UNDER SIEGE

2300 MHZ appears to be the latest band under siege. An October report by the National Telecommunications and Information Administration entitled Land Mobile Spectrum Planning Options suggests a new use for the band 2300-2310 MHZ. The report says that the band has potential for new, non-Federal radiolocation, fixed and mobile communication technologies. The study also notes that constraints are necessary for the protection of NASA's Deep Space Network and Planetary Radar operations in an adjacent band. A table in the report describes a possible future use of the band as Wide Area Land Mobile. The 2300 to 2310 MHZ band is expected to be the subject of an FCC allocation proceeding as a follow-on to ET Docket 94-32. Docket 94-32 dealt with 2390 to 2400 and 2402 to 2417 MHZ allocations. 2300 to 2310 MHZ is currently allocated to the Amateur Service on a secondary basis.

(*****
CHRISTMAS 6 METER OPENING

Mother nature gave hams a real treat on Christmas day. The 6 meter

band, normally quiet at this time of year went wild with DX. While reports from overseas are still a bit sketchy, at least one U.K. station was heard and worked in the central United States. There are also reports of JA stations being heard in the Pacific northwest but no confirmed QSO's.
Perhaps the most astounding report comes from a station in South Carolina. Ken Rameriz, KP4XS/4 reports over the VHF reflector that he

heard at least eighty stations from across the United States and Mexico and had QSO's with many. This included stations as far away as Colorado, Oregon and California.
Another exciting QSO was reported by Dale Parfitt, WA2YPY who contacted Arizona from Central Florida while Bill Hudson, WA0KBZ in Missouri had numerous contacts into New England and Florida.
And heres the kicker. While the majority of these QSO's took place

on single sideband at the low end of the band, several good DX contacts also took place on AM -- on the old AM calling frequency of 50.400 MHz by hams claiming to have used 1950's vintage Gonset Communicators, Clegg 99ers and other older gear! And almost everyone is commenting that this is perhaps the best 6 meter opening in years. Some old time 6 meter enthusiasts say that Christmas Day 1995 sounded like any day at the height of 6 meter DX back in July of 1959!

(*****
XE2HWB INVOLVED IN ACCIDENT

Joe Lynch, N6CL and Jack Henry N6XQ report via the VHF reflector that well known Baja California operator, XE2HWB, has been involved in an auto accident. According to news reports, Bernardo's car was hit by a large stone forcing it off the road. XE2HWB suffered a fractured skull and underwent three hours of surgery. He will be in the hospital for at least another two weeks and is expected to fully recover. Get well wishes can be sent to his Callbook address.

(*****
WARNING PLAN DERAILED

The best laid plans of mice and men can sometimes go wrong because of bureaucracy. This holds true even in cases where it might involve saving lives.

A plan to warn north Alabama residents about approaching severe weather may have run into a snag. In Huntsville, Alabama Outdoor Advertising, television station WHNT-TV and Compass Bank announced a project to warn motorists when bad weather threatens. Their plan calls for equipping as many as 100 billboards with lights that would flash when severe weather threatens. Huntsville is all too familiar with severe weather, back in 1989, a tornado hit the city, killing 22 people, many died in their cars. But Hulan Smith with the City's Inspections Division says the warning plan may be illegal. That's because Huntsville has a city ordinance prohibiting distracting road signs. Smith says flashing lights would violate the law.

Many Alabama Amateurs are involved in severe weather spotting nets.

They literally risk life and limb to help warn their neighbors of tornadoes and other storms. These hams cannot understand why the bureaucrats in Huntsville would invoke a rule that in this case could cause their community harm.

(*****
APRtrak FOR SPARTAN

Bob Bruninga, WB4APR suggests that if you are going to be using his

APRtrak program for the upcoming SPARTAN launch, be sure you get version 0.5. Bob says that the first release, version 0.4 has a flaw is that keeps APRtrak stuck in Eastern Daylight Time Zone. It can be made to work by forcing your clock to EDT time zone, but with other improvements in the latest release, he would encourage you to get 0.5. Bob says that you can tell which version you have on the start-up screen and on the F1-Help screen. Version 0.4 will be dated in October, and version 0.5 will be dated in November. WB4APR adds that before the January 11th Spartan launch date that he will put out some helpful hints on the version 0.5 operation.

(*****
NEW BAND! NEW STATION! 1660 KHZ.

America's first new radio station on the new expanded AM broadcast band is now on the air! N8IYV reports via packet that it was 20 over S9 in Northeastern Ohio at 00:53 UTC on December 19th. Tom says that the station format was easy listening music with no commercials at this time. Its callsign is WJDM and its located in Elizabeth, New Jersey.

SEASONS GREETINGS FROM DP0MIR

German Astronaut Thomas Reiter, DF4TR, who is aboard the Russian MIR
space station until February is sending seasons greetings for Christmas and New Year to all HAMs and SWLs worldwide. Reiter is using the digital voice recorder constructed by Thomas Kieselbach, DL2MDE to send out his message on 145.800 MHZ. As time permits Reiter will be live on the air as DP0MIR.

(*****
DX - SCARBOROUGH REEF

Lots of DX news this week. First, the ARRL's Membership Services Committee has voted 5 to 2 to recommend the addition of Scarborough Reef to the ARRL DXCC Countries List. Earlier this year, the DX Advisory Committee and the Awards Committee had come to opposite conclusions regarding the eligibility of Scarborough Reef for separate DXCC status.
Under new procedures adopted by the ARRL Board last July, when

committees do not agree the question is referred to the Membership Services Committee for review and final recommendation to the full Board. Now that the MSC has said yes, their recommendation that Scarborough Reef be added to the DXCC List will be considered by the Board of Directors at its upcoming January meeting.

(*****
DX - PRATUS ISLAND

And the ARRL DX Advisory Committee and the Awards Committee have both voted to add Pratas Island, BV9P, to the DXCC roster. This, for contacts made January 1st, 1994 and later.
Because of some irregularities the ARRL says that it will be necessary for anyone who has a picture type QSL card from the January or March 1994 operations to obtain a replacement. The picture cards will not -- we repeat -- will not be accepted for DXCC credit.
QSL cards for Pratas will be welcome by the DXCC Desk starting on April 1st. Cards received before that date will be returned without action.
Pratas Island is located in the South China Sea and is administered

by Taiwan.

(*****
UTAH CELEBRATION

Hams around the world are invited to help the state of Utah in its Centennial Anniversary. To commemorate the event, the Utah Amateur Radio Club will be operating W7SP on Saturday January 6th. Look for the station on 14.196 MHZ from 16:00 to 23:00 UTC and QSL with an SASE to the:

Utah Amateur Radio Club
2671 Dolphin Way
Salt Lake City, Utah
84121

(*****
DUBLIN REPEATER BACK ON

And finally, a Dublin Ireland repeater is back on the air after a hiatus of several months due to jamming. The Dublin Repeater Group says that its Two Meter voice repeater came back on the air on Friday, December 1st. The Repeater was ordered off following a period of serious abuse and misuse which contravened the repeaters license to operate.
A letter outlining the current situation being sent to all of its users. Unlike the United States FCC which seemingly does little to solve repeater interference problems, many other administrations simply pull ham radio licenses when a rules violation takes place.

(*****

And for this week, and for this year, that's all from the Amateur Radio Newsline. You can write to us at:

NEWSLINE

This is JIM, in Studio City - KE6YB. I have mixed feelings about this issue. I respect anybody that is a good operator,, BUT,, The original purpose of ham radio was experimentation, invention, and advancing the state of the art. Ham radio used to exist for people that are into radio because they are interested in RADIO, the art and science of radio. Now and even before the no - code tech license came in, I find more and more people (especially wives and kids) getting licensed just so they can have a high tech "CB" or car phone to communicate around the family. sometimes I hear xyl's that never ever use the radio for anything other than paging their husband, and vice versa. I thought thats what GMRS was supposed to be for. But thats allright with me on VHF and UHF. we are in constant danger of losing our frequencys, because they are under utilized. Thank God for the band plans that leave a few kc'c aside for weak signal and experimentation. now HF is a different story alltogether. I think the only thing that keeps HF from turning into another Childrens Band are the harder written tests and especially the code requirement. To appreciate operating code, you have to be in love with the art and science of radio communication. Most HFers know you can be heard under much worse conditions, with a much simpler and less powerful transmitter, using morse code.

Oh well, enough of the soapbox for today. Can someone tell me a little more? is this a "newsgroup" on the internet. I did not get into using a telephone modem, until last August. this is fairly new to me. Although I do have experience with "packet" and "amtor" (love em both)
How long will this post stay around, since these forums seem to have hundreds of new messages posted each day?

One more thing.. I need a manual for a Ten Tec Argosy, the analog version. Or I need to have someone send me the the address and phone # of TEN TEC in tennasee? thanks till next ttime - JIM - KE6YB

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W2JGR, AB6NJ/OH6DO, KS9W, N9JCl, W4MGN, K4CEF & Southeastern Cluster Group, 7L2RPY, DF5WA, DJ6RX, DL7IO, F6AJA, PS7AB, PY7ZZ, G4BUE & DX NEWS SHEET, VE1UK and ZL2HU the following DX information.

4L, GEORGIA (FIRST SATELLITE OPERATION). Sergey, UA6JR/3, will be active as 4L1R from January 4-18th. Activity will be on the satellites: AO-10 on 145.885 and AO-13 on 145.890 MHz. QSL Manager will be announced later.

8R1K QSL ROUTE (Update). Marko, AB6NJ/OH6DO, reports the 8R1K QSL route for 1995 SSB & CW, 1994 SSB and 1993 SSB CQ WW DX Contest operations is via OH6DO Callbook Address in Finland. If You have already sent via previous route OH1VL, no need to mail again, they will be answered too.

9N, NEPAL. Reports from Germany and Japan indicate that Shin, 9N1SW, has received permission to operate 160 meters. Check 1824 kHz starting around 2100z. The length of activity is unknown. QSL via JH1XUP, Yoshimi Maeda, 2-18-15 Inokashira, Mitaka, Tokyo, 181 Japan.

A6, U.A.E. Keep an eye around 14216 kHz between 1400 and 1530z for A61AN. QSL via Naser Fekri, P.O. Box 53656, Dubai, United Arab Emirates.

CY0TP QSL (Update). Wayne, VE1CBK, the QSL Manager for the CY0TP QSLs (Sable Island DXpedition), reports the cards have been printed and the computer labels are currently being generated and affixed to the cards. Wayne says the cards will be sent out in mid-January. Remember, the ONLY address for VE1CBK is: Wayne Edward King, 63 Brook St, Lake Fletcher, NS, B2T 1A5, Canada

FR5, REUNION ISLAND. Albert, F6EDF (ex-FR7AK), will be on Reunion Island from January 1-19th. He will try to re-use the FR5AK callsign or FR/F6EDF. Due to the antenna restriction, he will be active only on 20 meters. Look for him on 14190 kHz (split up 5 kHz).

FT8/W/X/Z, CROZET, KERGUELEN, ST. PAUL/AMSTERDAM ISLANDS. FR5HR informed W4MGN that he is on Reunion Island waiting for a ship to travel to these three islands. His departure is February 12th, first stop Crozet Island 8-10 days later. He does expect to be active from all three islands. No other information regarding length of stays, operating times or frequencies at this time.

HI8, DOMINICAN REPUBLIC. Berthold, DF5WA, will be active January 16th through February 6th as DF5WA/HI8 from the city Juan Dolio. Using his Kenwood TS 690 AT and dipole antennas, he plans to be active on all bands with operations on CW, SSB and RTTY. He plans to emphasize operating on 160/80 meters. QSL via DF5WA, Berthold Faisst, Hegelstr. 3, D-55122 Mainz.

IOTA SA-016 (DIB-07) DXPEDITION. Teresinha, PS8YL, will be active from now until January 17th, as PS8YL/PR8 on SSB from Sao Luiz Island. Check 14260 kHz after 1800z, and on the Brazil DX Net (Monday-Friday, 14240 kHz 0900z, and Saturday/Sunday, 21225 kHz, 1200z). Activity will be on 40-20 meters. QSL via Teresinha V. Nobre, Rua C 2103, Jardim Aeroporto, 64200-000, Parnaiba/PI, Brazil. (enclosed 2 IRC)

NEW DXPEDITIONER IN THE FAMILY. Holger, DL7IO (ex-DL7VTM) and Birgit, DL7IQ (ex-DL7VTZ), NODXA members, good friends and noted for their DXpeditions to TN4, 9I2, T25, etc.... report they have added a new member to their DXpedition team. She is called Saskia Moana, and is about 53 cm and has a weight of 3295 g and was born December 26th about 22:30 local time. "That means for the next few weeks we will not be active from any DX spot (hi)", says Holger. OPDX and NODXA would like to congratulate Birgit and Holger on their new addition.

PY0FZ WRAP-UP REPORT! Fred, PY7ZZ, reports on his vacation/DXpedition trip to Fernando de Noronha Islands as PY0FZ (December 13-20th). His activity was restricted because during the day he was out of the shack walking around the island, swiming etc. At night, he tried to be on the lower bands. Since he was active from Andre's, PY0FF, station and Andre maintains a BBS 24 hours a day on the air, he couldn't operate on 30 and 15 meters. His totals of QSOs band by band: 160m - 518, 80m - 1274, 40m - 735, 20m - 1023 and 17m - 351. QSL cards are being printed by WX9X and he hopes to start answering cards in about 30 days or so. "A VERY HAPPY AND PROSPER NEW YEAR to all of you. Best regards", de Fred - PY7ZZ/PY0FZ

S2, BANGLADESH. Both Mine, JA2NQG, and Nao, JE7RJZ, have cancelled their trip to S2-land, but reports of some other operators (from the Japanese UNICEF Ham Club) may be active between January 5th and 12th.

SAD NOTE. On Friday the 29th of December, Sid E. Molen, VK2SG, became a silent key due to a heart attack. Sid was 76 years old and had been in poor health since 1993. Sid, along with Bill, VK2EG, was a co-founder of the Australian National Amateur Radio Teleprinter Society (ANARTS) in the early 1970's. They subsequently started the weekly RTTY DX Notes which were renamed the VK2SG RTTY DX Notes in 1993 when Sid had to relinquish his contributing efforts to others. Sid was the first to receive RTTY DXCC in Australia. The VK2SG RTTY DX Notes will continue to be generated by the present group of rotating editors, I5FLN, WB2CJL and W2JGR.

TN, CONGO. The DXNS report Hazel, TN7OT, says her radio is broken and most likely will not be repaired before her departure in April. She will deal with QSLs when she returns home.

WP2, U.S. VIRGIN ISLANDS. Gerald, K9BG and Bob, KS9W, will be signing /WP2 from St. Criox, January 3-10th. Look for them on CW, low bands and the ARRL RTTY Roundup. QSL to home calls.

VK9C & VK9X, COCOS-KEELING AND CHRISTMAS ISLANDS. Joerg/DL8WPX, Dietmar/ DL3DXX, Falk/DK7YY and Juergen/DL7UFN will be active from Christmas Island as VK9XY, February 4-13th. They will also be active from Cocos-Keeling Islands as VK9CR, February 14-23rd. Activity will be on all bands from 160-6 meters with operations on the satellites, CW and SSB, but no digital modes. A special emphasis will be put on 160 meters and the other low bands. QSLs to DK7NP, Rudi Hein, Am Uferholz 7, D-96047 Bamberg, Germany. (Remember: Air Mail from Germany to destinations outside Europe: $2.20 - bureau $0.0x)

WEST INDIES DXPEDITION. Scott/N9JCL, Tom/K0SN, Paul/WC9E and JIM/AA9PB, will have a one day layover in Autigua (V2) on their way to Dominica (J7) and will be active January 20th only. From Dominica, the group will be active January 20th (late evening) until January 25th. Activity from both locations will be on all bands (160-10 meters, including the WARC bands) with operations on CW, SSB, RTTY and RS-12 satellite. There will be a special effort to be active on RTTY and 160/80 meter CW. Callsigns for both locations are not known yet. QSL both operations via K0SN.

XU, KAMPUCHEA. A station XU1XX/3 was reported on 14195 around 1459z. There are no other details about this station. If you have something (details) on this station, please send it to OPDX.

ZL8, KERMADEC ISLAND DXPEDTION (Updated details from a press release). The Kermadaec DX Association is planning a DXpedition to Raoul Island in the Kermadec Group in May 1996. Planning has taken place over the past two years and now, with some difficult negotiations behind them, the "Permit to Land" and "Operating Licence" have been issued to their Association. The callsign ZL8RI was issued. They plan to use top DX operators during their 11 day operation which will be multi-mode and multi-band. The Kermadecs is in the "Top 10 Most Wanted Countries List", but the DXpedition team plans to move it considerably down the list.

The TEAM consist of:
Chris Hannagan, ZL2DX, who has operated from the Kermadecs, Campbell Islands and the Chathams Island over the past 15 years. Chris is a skilled contester and CW operator.

Ron Wills, ZL2TT, is the DX editor of the NZART a national amateur radio magazine and was one of the operators during the 1993 ZL7AA Chatham Island DXpeditions.

Lee Jennings, ZL2AL, enjoys contesting and CW. He organized the 1993 ZL7AA Chatham Island DXpedition.

Ken Holdom, ZL2HU, is the DXpedition's organizer. Ken has operated
from both North and South Cooks Island (ZK1KH).

Al Hernandez, WA3YVN, has gained international credibility with many
DXpeditions such as LU1ZC South Shetlands, LU2ZE South Orkneys,
VP8MS Antarctic Peninsular, VP8CBC Falklands and C6AHI Bahamas. He
organized and operated the 1992 DXpedition to South Sandwich (VP8SSI)
and the 1995 DXpedition to South Georgia (VP8SGP).

They will be adding one more operator to replace Ron, ZL1AMO, since
he has withdrawn from the ZL8RI DXpedition. The team presently needs
the resources to charter the ship to get them to Raoul Island. They
are looking at the ship called "Evohe". Donations are vital to have Raoul
Island become active and they need around $25,000 to make it happen.
If you would like to send a donation, send it to:
The Kermadec DX Association, c/o Mr. Ken Holdom, P.O. Box 56099,
Tawa, Wellington, New Zealand

Excerpts and distribution of The OPDX Bulletin are granted as long as
KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS
online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with
the Sysop or send InterNet Mail to one of the three following addresses:
kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which
shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring (the second ring should
be a false ring from the fax/data switch box) and then dial four quick
ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every
second will not have to do this step.) 3) The phone will pick up and
after the "BEEP" leave your voice message or FAX.

4607. super morse

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-31 00:00:00 UTC
From: jyazel@freenet.columbus.oh.us
Message-ID: <4c6aom$r7r@acme.freenet.columbus.oh.us>
Source record: 233060

I recently replied to a posting about the Super Morse software and indicated that it did not work well with faster computers.

I contacted the author and found out that I was trying a very old version. He said that the problem is fixed in newer versions.

I have obtained version 4.10 (file: SM410.ZIP from oak.oakland.edu) and it appears to work very well.

It seems to be a very good program.

4608. Is Wayne Green losing it ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-31 00:00:00 UTC

Hello,

I've been reading Wayne Green articles/editorials for many years, starting out with 80 Micro when the TRS-80 was popular. I always looked at Wayne Green's opinion as kind of the opposing point of view but lately WHOA !! either it's me or Wayney has really started to slip a few notches. In some of his latest articles in 73 mag he's been touting an Aids cure by strapping a couple of electrodes on your ankle and running a few micro/milli amps of current through them to "purify" your blood of that nasty old Aids virus. Wayney has also started blaming vaccinations for our high crime rate (wonder if I got caught trying to heist a Brinks truck if the Judge would believe it was my Polio vaccination ???) And then Wayney goes on and on about Cold Fusion, UFO's Parapsychology etc. I wonder if Wayne is slipping or if this is flame bait on his part to stir up a few more sales of his rather thin 73 magazine ??

This should be an interesting thread :-)

Gary WB8POK
